PREFACE	<i>page ix</i>
1 INTRODUCTION	1
The Vector–Matrix Notation	9
On the Nature of Constraints	17
The Central Problem of Analytical Dynamics	18
A Look Ahead	20
Problems	22
2 MATRIX ALGEBRA	24
Preliminaries	24
Vector Spaces, Subspaces and Basis	25
Types of Matrices	32
Some Properties of Matrices	34
Generalized Inverse of a Matrix	44
Moore–Penrose Generalized Inverse	44
Some Other Generalized Inverses	62
Problems	68
3 THE FUNDAMENTAL EQUATION	71
Configuration Space	72
Constraints	72
Holonomic Constraints	73
Nonholonomic Constraints	79
Gauss’s Principle	82
The Fundamental Equation	84
The Force of Constraint	93

vi		Contents
	Another Look at the Fundamental Equation	101
	Problems	103
4	FURTHER APPLICATIONS	106
	The Fundamental Equation	106
	Two General Principles of Analytical Dynamics	110
	Further Applications	112
	Problems	128
5	ELEMENTS OF LAGRANGIAN MECHANICS	131
	Virtual Displacements	131
	The Lagrangian Formulation	136
	Explicit Determination of Lagrange Multipliers	143
	Generalized Coordinates and Holonomic Constraints	147
	Generalized Coordinates and Nonholonomic Constraints	153
	Lagrange's Equations for Unconstrained Systems	158
	The Fundamental Equation in Lagrangian Coordinates	167
	Summary	170
	Problems	171
6	THE FUNDAMENTAL EQUATION IN GENERALIZED COORDINATES	175
	Useful Mathematical Machinery	176
	The Fundamental Equation in Generalized Coordinates	177
	Two Principles of Analytical Mechanics	181
	Description of Rigid Bodies	192
	Description of the Orientation of a Rigid Body	193
	Theory of Rotations	194
	Orientation of a Rigid Body Using Angles ϕ_1 , ϕ_2 and ϕ_3	202
	Infinitesimal Rotations and Angular Velocity	204
	Components of the Angular Velocity	206
	Kinetic Energy of a Rigid Body	208
	Problems	214
7	GAUSS'S PRINCIPLE REVISITED	220
	Statement of Gauss's Principle in Cartesian Coordinates	220
	Virtual Displacements Revisited	223
	Gauss's Principle Again	227
	Gauss's Principle in Generalized Coordinates	230
	Problems	235

Cambridge University Press
978-0-521-48217-2 - Analytical Dynamics: A New Approach
Firdaus E. Udawadia and Robert E. Kalaba
Table of Contents
[More information](#)

Contents	vii
8 CONNECTIONS AMONG DIFFERENT APPROACHES	236
Forms of the Fundamental Equation	237
The Fundamental Form and the Lagrange Multiplier	241
Direct Use of the Basic Principle of Analytical Mechanics	242
Equations of Motions through Methods of Elimination	244
Elimination Using the Basic Principle of Analytical Mechanics	244
The Gibbs–Appell Approach	250
Problems	255
REFERENCES	257
AFTERWORD	259
INDEX	261
