

CONTENTS

SECTION 1. OVERVIEW OF ENZYMES

1 INTRODUCTION TO ENZYMES	3
1.1 INTRODUCTION.....	3
1.1.1 Why are Enzymes Needed?.....	4
1.1.2 Allosteric Enzymes.....	5
1.2 THE STRUCTURES AND CONFORMATIONS OF PROTEINS.....	7
1.2.1 Protein Conformations	7
1.2.2 Protein Structures	9
1.2.3 Multidomain Proteins.....	11
1.2.3.1 Evolution of Multidomain Proteins.....	11
1.2.3.2 Interaction Between Domains	14
1.2.3.3 Alternate Oligomer Structures for the Same Enzyme.....	16
1.3 NORMAL VALUES FOR CONCENTRATIONS AND RATES	17
1.3.1 Concentrations of Enzymes.....	17
1.3.2 How Fast are Enzymes?	21
1.4 BRIEF HISTORY OF ENZYMES	23
1.5 USEFUL RESOURCES	26
1.5.1 Websites	26
1.5.2 Reference Books	26
1.5.2.1 General Enzymology.....	26
1.5.2.2 Allosteric Enzymes	26
1.5.2.3 Enzyme Kinetics	26
1.5.2.4 Ligand Binding and Energetics.....	27
1.5.2.5 Enzyme Chemistry and Mechanisms	27
1.5.2.6 Enzymes in Metabolism	27
1.5.2.7 History of Enzymology	27
1.5.2.8 Hemoglobin.....	27
2 THE LIMITS FOR LIFE DEFINE THE LIMITS FOR ENZYMES	29
2.1 NATURAL CONSTRAINTS THAT ARE LIMITING	29
2.1.1 The Possible Concentration of Enzymes is Most Likely to be Limiting	30

2.1.2	The Rate for Enzymatic Steps Must Be Faster Than Natural, but Undesired and Harmful Reactions	31
2.1.2.1	Oxygen Radicals	32
2.1.2.2	Metabolic Acidity	32
2.1.2.3	Ultraviolet Radiation	32
2.1.3	DNA Modifying Enzymes: Accuracy is More Important Than Speed	34
2.1.4	Signaling Systems: Why Very Slow Rates Can Be Good	34
2.1.5	What is the Meaning of the Many Enzymes for Which Slow Rates Have Been Published?	35
2.2	PARAMETERS FOR BINDING CONSTANTS	36
2.2.1	The Importance of Being Good Enough	36
2.2.2	The Range of Binding Constants	38
2.3	ENZYME SPECIFICITY: k_{cat}/K_m	41
2.3.1	A Constant k_{cat}/K_m May Permit Appropriate Changes for Enzymes with the Same Enzyme Mechanism	42
2.3.2	The Specificity Constant may Apply to Only One of the Two Substrates for a Group of Enzymes with the Same Mechanism	43
2.3.3	The Same Enzyme Can Maintain Constant Specificity While Adapting to Changes	45
2.3.4	The Limits to k_{cat}/K_m	45
2.3.5	Ribozymes and the RNA World?	47
3	ENZYME KINETICS	49
3.1	TIME FRAMES FOR MEASURING ENZYME PROPERTIES	49
3.2	STEADY STATE KINETICS	50
3.2.1	The Meaning of v and k_{cat}	51
3.3	THE MOST COMMON GRAPHIC PLOTS	52
3.3.1	The Michaelis–Menten Plot	52
3.3.2	The Lineweaver–Burk Plot	54
3.3.3	The Eadie–Hofstee Plot	55
3.3.4	The Hill Plot	56
3.4	INTERPRETING BINDING CONSTANTS	57
3.5	ENERGETICS OF ENZYME REACTIONS	59
3.5.1	Michaelis–Menten Model	60
3.5.2	Briggs–Haldane Model	60
3.5.3	Additional Intermediates Model	61
4	PROPERTIES AND EVOLUTION OF ALLOSTERIC ENZYMES	63
4.1	DIFFERENT PROCESSES FOR CONTROLLING THE ACTIVITY OF AN ENZYMATIC REACTION	63
4.1.1	Modifying the Activity of an Existing Enzyme	64
4.1.2	Modifying Activity by Ligand Binding	64

4.1.3	Modifying Activity by Covalent Modification	65
4.1.4	Modifying Activity by Altered Gene Transcription	69
4.1.5	Modifying Activity by Proteolysis.....	69
4.2	EVOLVING ALLOSTERIC ENZYMES.....	70
4.2.1	Allosteric Regulation by Stabilizing the Appropriate Species in an Ensemble	71
4.2.2	Evolution of Allosteric Enzymes	72
4.3	URACIL PHOPHORIBOSYLTRANSFERASE: DIFFERENT REGULATORY STRATEGIES FOR THE SAME ENZYME	73
5	KINETICS OF ALLOSTERIC ENZYMES	77
5.1	KINETICS FOR COOPERATIVE <i>K</i> -TYPE ENZYMES.....	77
5.1.1	The MWC Model for Positive Cooperativity	80
5.1.2	The Influence of the Key Parameters on the Extent of Cooperativity	83
5.1.2.1	Homotropic Effects	83
5.1.2.2	Heterotropic Effects	84
5.2	RNA RIBOSWITCHES ALSO SHOW ALLOSTERIC BINDING	86
5.3	NEGATIVE COOPERATIVITY	87
5.3.1	Different Mechanisms Produce Negative Cooperativity	87
5.3.1.1	Half-of-the-Sites Activity.....	90
5.3.2	Improper Enzyme Samples may Produce Erroneous Negative Cooperativity.....	90
5.3.3	Morpheins Display Negative Cooperativity.....	91
5.3.4	Comparison of the MWC and KNF Models	91
5.4	Conformational CHANGE OR INDUCED FIT?	95
5.5	ALLOSTERIC SENSITIVITY AND MOLECULAR SWITCHES	97
5.5.1	Enzyme Cascades and the Extent of Positive Cooperativity <i>In Vitro</i>	97
5.5.2	Enzyme Cascades and the Extent of Positive Cooperativity <i>In Vivo</i>	101

SECTION 2. *K*-TYPE ENZYMES

6	HEMOGLOBIN	105
6.1	OVERVIEW OF HEMOGLOBINS	105
6.1.1	The Late Appearance of Oxygen in the Evolution of Life	105
6.1.2	The Diversity of Globins.....	106
6.1.3	Diversity of Globin Structures and Kinetics.....	107
6.1.4	Hemoglobin and Its History in Understanding Cooperative Binding.....	108
6.1.5	Types of Globins and Their Normal Functions	109
6.1.6	Converting Binding Constants to Molar Units and for 37 °C and pH 7.4	111

6.2 COOPERATIVITY.....	112
6.2.1 Structural Mechanism for Cooperativity.....	115
6.2.2 Regulatory Effectors.....	115
6.2.2.1 Bohr Effect.....	115
6.2.2.2 Temperature.....	117
6.2.3 Special Regulatory Effectors.....	119
6.2.4 Fetal Hemoglobin.....	120
6.3 COOPERATIVITY MEASURED BY DIFFERENT MODELS.....	120
6.3.1 Oxygen Binding Without Cooperativity.....	122
6.4 HEMOGLOBIN IS ALSO AN ENZYME!.....	123
6.4.1 Summary of Hemoglobin Functions.....	124
7 GLYCOGEN PHOSPHORYLASE.....	127
7.1 OVERVIEW OF GLYCOGEN PHOSPHORYLASE.....	127
7.1.1 Assay of Glycogen Phosphorylase.....	128
7.2 REGULATION OF GLYCOGEN PHOSPHORYLASE.....	129
7.2.1 Two Different Activating Mechanisms for Two Different Physiological Needs.....	130
7.2.2 Ligands Binding at Two Different Sites on One Subunit.....	131
7.2.3 Activation by AMP and IMP.....	134
7.2.4 Activation by Other Metabolic Effectors.....	135
7.2.5 Activation by Phosphorylation.....	135
7.2.6 Summary of Effector Binding.....	136
7.3 EVOLUTION OF GLYCOGEN PHOSPHORYLASES.....	136
7.3.1 Isozymes of Glycogen Phosphorylase.....	137
8 PHOSPHOFRUCTOKINASE.....	139
8.1 THE DIVERSITY OF PHOSPHOFRUCTOKINASES.....	139
8.1.1 Summary of Phosphofructokinases.....	141
8.1.2 Properties and Emergence of Phosphofructokinases.....	142
8.1.3 PP _i -PFKs.....	143
8.2 REGULATION OF PHOSPHOFRUCTOKINASE.....	144
8.2.1 Regulation of the Phosphofructokinase in <i>E. coli</i>	144
8.2.2 Structure of the Bacterial Phosphofructokinase.....	146
8.2.3 Mutation to Reverse Regulation of Bacterial Phosphofructokinase.....	148
8.2.4 Regulation of the Mammalian Phosphofructokinase.....	149
8.2.5 How Many Binding Sites for ATP?.....	150
8.3 KEY REGULATORS OF PHOSPHOFRUCTOKINASE.....	152
8.3.1 Effectors for the Bacterial Phosphofructokinase.....	152
8.3.2 Effectors for the Mammalian Phosphofructokinase.....	152
8.3.3 Effectors of the Yeast Phosphofructokinase.....	155
8.3.4 Regulation by Phosphorylation.....	155

8.4	ISOZYMES.....	156
8.4.1	Binding of Fructose-2,6-P ₂ by Mammalian Isozymes	157
8.5	DEFINING A MODEL FOR COOPERATIVITY	158
8.5.1	Fluorescence Changes with Different Ligands	159
9	RIBONUCLEOTIDE REDUCTASE.....	161
9.1	THE DIVERSITY OF RIBONUCLEOTIDE REDUCTASES.....	161
9.1.1	Evolution of Ribonucleotide Reductases	165
9.2	BINDING OF NUCLEOTIDES TO RIBONUCLEOTIDE REDUCTASE	165
9.2.1	Binding of dATP	165
9.2.2	Binding of ATP	166
9.2.3	Binding of dTTP and dGTP	167
9.2.4	Competition Between Regulatory Nucleotides.....	168
9.3	REGULATION OF RIBONUCLEOTIDE REDUCTASE FROM <i>E. COLI</i>	170
9.3.1	Regulation by ATP and dATP	170
9.3.2	dTTP at the S Site Promotes the Reduction of CDP	172
9.3.3	dTTP at the A Site Inhibits the Reduction of CDP	172
9.3.4	ATP Activates by Binding at the S Site	173
9.3.5	Binding at the A Site Determines the Overall Conformation and Activity	174
9.4	REGULATION OF RIBONUCLEOTIDE REDUCTASE FROM CALF.....	176
9.5	REGULATION BY ALTERNATE, NOVEL R2 SUBUNITS	177
9.6	A GENERAL MODEL	178
10	HEXOKINASE.....	179
10.1	INTRODUCTION.....	179
10.1.1	Functions of Different Hexokinases	180
10.1.2	Continuing Need for a Hexokinase IV.....	183
10.2	FUNCTIONS OF THE DUPLICATED DOMAIN.....	184
10.2.1	Product Inhibition at the Catalytic Site	184
10.2.2	The N-Terminal Half Has Membrane Binding Sites	186
10.2.3	Negative Cooperativity Due to Separate Binding Sites Within a Monomer	186
10.2.4	Negative Cooperativity Due to a Mixture of Isozymes	186
10.3	POSITIVE COOPERATIVITY IN A MONOMERIC ENZYME	187
10.3.1	Models to Explain Cooperativity in a Monomeric Enzyme	188
10.3.2	The Slow Transition Model	189
10.3.3	Positive Cooperativity is a Kinetic Effect.....	191
10.3.3.1	A Burst or a Lag Defines the Time for Conformational Change	191
10.3.3.2	Ligand Binding Itself has No Cooperativity	191
10.3.3.3	Glucose Activates Phosphorylation of Fructose	192
10.3.4	The Slow Transition Model Vs. Mnemonic Model	193

10.4	REGULATORS OF GLUCOKINASE.....	194
10.4.1	Small Molecule or Metabolite Activators.....	194
10.4.2	Glucokinase Regulatory Protein	195
10.4.3	Inhibition of Hexokinase IV by Lipids	195
10.4.4	Need for Multiple Hexokinases	196
10.5	EVOLUTION OF HEXOKINASES	197
10.5.1	Expansion of a Basic Precursor.....	197

SECTION 3. *V*-TYPE ENZYMES

11	INTRODUCTION TO <i>V</i>-TYPE ENZYMES	201
11.1	OVERVIEW OF <i>V</i> -TYPE ENZYMES.....	201
11.2	ENZYMES WITH A MODEST CHANGE IN V_{MAX} AND K_M	203
11.2.1	Mercaptopyruvate Sulfurtransferase	203
11.2.2	Uracil Phosphoribosyltransferase	203
11.2.3	Phosphoglycerate Dehydrogenase	205
11.3	ENZYMES WITH LARGE CHANGES IN V_{MAX} AND K_M	206
11.3.1	AMP Nucleosidase.....	206
11.3.2	Regulatory Switches.....	207
11.3.3	Exceptions	207
12	G PROTEINS	209
12.1	OVERVIEW OF G PROTEINS	209
12.1.1	p21 ras	209
12.1.2	Mechanism of p21 ras	210
12.2	GEFS LOWER THE AFFINITY OF P21 FOR GUANINE NUCLEOTIDES	211
12.2.1	Changes in Affinity for Guanine Nucleotides Produced by GEF	211
12.2.2	Specificity of the Guanine Nucleotide Binding Site.....	213
12.2.3	Performing Binding Measurements for Tight Binding Ligands.....	213
12.3	ONCOGENIC MUTANTS OF P21	214
13	PROTEIN KINASES.....	215
13.1	OVERVIEW OF PROTEIN KINASES	215
13.2	MAP KINASES	217
13.2.1	p38 MAP Kinases	217
13.2.1.1	Inhibition of p38 at a Novel Allosteric Site.....	218
13.2.2	p42 MAP Kinase	219
13.2.3	AMP-Activated Protein Kinase	220
13.2.4	cAMP-Activated Protein Kinase.....	223

13.2.4.1 Both cAMP Sites are Not Required for Activation	224
13.2.3.2 The Two cAMP Sites Have Different Dissociation Rates	225
13.2.3.3 ATP Alters the Affinity for cAMP	225
REFERENCES.....	227
INDEX.....	241
