

Stellar Physics

1: Fundamental Concepts and Stellar Equilibrium

Bearbeitet von
G.S Bisnovatyi-Kogan, A.Y Blinov, M Romanova

1. Auflage 2001. Buch. xv, 324 S. Hardcover
ISBN 978 3 540 63262 7
Format (B x L): 15,5 x 23,5 cm
Gewicht: 1450 g

[Weitere Fachgebiete > Physik, Astronomie > Astronomie: Allgemeines > Astrophysik](#)

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

1	Thermodynamic Properties of Matter	1
1.1	Perfect Gas with Radiation	1
1.2	Degenerate Relativistic Gas	8
1.2.1	Strong Degeneracy	10
1.2.2	Very Low Matter Density	13
1.2.3	Weak Degeneracy	16
1.2.4	Non-relativistic Gas	19
1.2.5	Ultrarelativistic Gas	21
1.2.6	Integral Representation	22
1.2.7	The General Case	26
1.3	Nuclear Equilibrium Equation of State in the Presence of Weak Interaction Processes	28
1.4	Matter at Very High Densities, Neutronization, Particle Interaction	33
1.4.1	Cold Neutronization Along the Minimum Energy States (MES)	33
1.4.2	Free Nucleon Formation. MES at Subnuclear Densities and Nucleon Interaction	37
1.4.3	The Density Above Its Nuclear Value Inside Atomic Nuclei	39
1.4.4	Calculation of Corrections for Finite Temperature	41
1.4.5	Non-equilibrium Neutronization with Increasing Density in Cold Matter	43
1.4.6	Non-equilibrium Composition During Cooling of Hot Dense Matter	47
1.4.7	Thermodynamic Properties of Matter and Coulomb Interactions	49
2	Radiative Energy Transfer. Heat Conduction	63
2.1	Radiative Transfer Equation	63
2.2	The Eddington Approximation. Radiative Heat Transfer	67
2.2.1	Moments of the Transfer Equation	67
2.2.2	Plane Atmosphere	68
2.2.3	Spherical Symmetry	70

2.3	Opacity: Absorption, Scattering and Electron Heat Conduction. The Rosseland Mean	72
2.3.1	Free-Free Transitions	72
2.3.2	Bound-Free Transitions	74
2.3.3	Krammers' Formula	75
2.3.4	Bound-Bound Transitions	76
2.3.5	Scattering from Electrons	77
2.3.6	The Electron Heat Conduction	79
2.3.7	Other Sources of Opacity	80
2.3.8	Opacity Tables	81
2.4	Heat Conduction in Matter at High Densities and Temperatures	88
2.4.1	Solution of the Boltzmann Equation for Non-relativistic Gas	88
2.4.2	Neutron Gas Heat Conduction	90
2.4.3	Non-relativistic Electron Heat Conduction	95
2.4.4	The Degenerate Electron Heat Conduction Including Relativistic Effects and Effects of Non-perfect Ions	98
2.4.5	Absorption of Radiation at High Temperatures and High Magnetic Fields	101
2.5	Radiative Transfer in Moving Media	106
2.5.1	The Transfer Equation in the Co-moving System ...	106
2.5.2	The Moment Equations in the Eddington Approximation	108
3	Convection	111
3.1	Conditions for the Onset of Convection. Mixing-Length Theory	111
3.1.1	A Criterion for Convective Instability	111
3.1.2	Effects of Inhomogeneous Chemical Composition ...	113
3.1.3	Heat Transfer by Convection: The Mixing-Length Approximation	115
3.2	Non-local and Non-stationary Description of Convection ...	119
3.2.1	Generalization of the Mixing-Length Model	119
3.2.2	Non-stationary Convection	122
3.2.3	Penetration and Overshooting	124
3.3	Numerical Simulation of Convection	125
4	Nuclear Reactions	129
4.1	Nuclear Reaction Rates	129
4.1.1	Cross-Sections and the Rates of Direct and Reverse Reactions	130

4.1.2	Non-resonant Reactions with Charged Particles	133
4.1.3	Resonant Reactions	135
4.1.4	Reactions at High Temperatures	136
4.1.5	Non-resonant Reactions with Neutrons	136
4.2	Hydrogen, Deuterium and Helium Burning	137
4.2.1	Proton-Proton Reaction and Deuterium Burning . . .	138
4.2.2	Carbon and Other Hydrogen Burning Cycles	140
4.2.3	Helium Burning	147
4.3	Reactions Involving Heavy Nuclei at High Temperatures . . .	150
4.4	Processes of Heavy Element Formation	153
4.4.1	Slow Captures (<i>s</i> -Process)	153
4.4.2	Rapid Capture Processes (<i>r</i> -Process), <i>rbc</i> -, <i>n</i> - and <i>p</i> -Processes	161
4.5	Nuclear Reactions in Dense Matter	163
4.5.1	Weak Screening	166
4.5.2	Strong Screening	168
4.5.3	Strong Screening Calculations Based on Condensed Body Models	169
4.5.4	Pycnonuclear Screening	171
4.5.5	Electrons in the Strong-Screening Regime	172
4.5.6	Screening of Resonant Reactions	173
5	β-Processes in Stars	179
5.1	Fundamentals of the Weak Interaction Theory	179
5.1.1	Nuclear β -Decay	181
5.1.2	Matrix Elements in β -Decay	182
5.1.3	Calculation of the Square of Matrix Element and Muon-Decay Probability	187
5.1.4	Calculation of $ H _b^2$ and the Probability for Neutron and Nuclei to Decay; Influence of Magnetic Field . . .	190
5.1.5	Classification of β -Decays; Selection Rules	194
5.1.6	Coulomb Corrections	196
5.1.7	Neutral Currents	197
5.1.8	On the Weinberg-Salam Theory	201
5.2	Neutrino Cooling of Stars	214
5.2.1	Annihilation of e^+e^- Pairs	214
5.2.2	Neutrino Photoproduction	216
5.2.3	Plasma Neutrino	216
5.2.4	Interpolation Formulae	218
5.2.5	Energy Losses Due to URCA-Processes	219
5.2.6	Other Mechanisms of Cooling by Neutrino Emission . . .	222

5.3	Matter Heating in Non-equilibrium β -Processes	223
5.3.1	Non-equilibrium Heating Rate	223
5.3.2	The Effect of Capture onto Excitation Levels of the Final Nucleus	225
5.3.3	Two-Step Non-equilibrium Electron Capture in White Dwarfs near the Chandrasekhar Limit	226
5.3.4	Non-equilibrium Matter Heating During Collapse ...	227
5.4	Neutrino Transfer and Neutrino Heat Conduction	227
6	Equations of Equilibrium and Stellar Evolution and Methods for Their Solution	233
6.1	Spherically Symmetric Stars	233
6.1.1	The Schwarzschild Method	238
6.1.2	The Henyey Method	240
6.1.3	The Henyey Method with Matched Envelope	243
6.1.4	Atmosphere Fitting in Self-Consistent Models with Mass Loss [52]	244
6.1.5	Relaxation Method Stable in the Presence of Various Time Scales	245
6.1.6	Relaxation Method with Adaptive Grid	247
6.2	Equilibrium of Rotating Magnetized Stars	249
6.2.1	Equilibrium Equations for Rotating Magnetized Stars	250
6.2.2	Conditions for Stationary Solutions	252
6.2.3	The Self-Consistent Field Method	253
6.2.4	Methods Based on the Newton–Raphson Iteration Scheme	257
6.3	Evolution of Rotating Stars	259
6.3.1	Meridional Circulation	260
6.3.2	Evolutionary Calculations Including Circulation	262
	References	267
	List of Symbols and Abbreviations	305
	Some Important Constants	317
	Subject Index	319

Contents of Volume 2

- 7 Star Formation
- 8 Pre-main Sequence Evolution
- 9 Nuclear Evolution of Stars
- 10 Collapse and Supernovae
- 11 Final Stages of Stellar Evolution
- 12 Dynamical Stability
- 13 Thermal Stability
- 14 Stellar Pulsations and Stability
- References
- List of Symbols and Abbreviations
