

Signaling Pathways for Translation

Insulin and Nutrients

Bearbeitet von
Robert Rhoads

1. Auflage 2001. Buch. X, 186 S. Hardcover
ISBN 978 3 540 41709 5
Format (B x L): 15,5 x 23,5 cm
Gewicht: 467 g

[Weitere Fachgebiete > Medizin > Vorklinische Medizin: Grundlagenfächer > Molekulare Medizin, Zellbiologie](#)

The logo for beck-shop.de features the text 'beck-shop.de' in a bold, red, sans-serif font. Above the 'i' in 'shop' are three red dots of increasing size. Below the main text, 'DIE FACHBUCHHANDLUNG' is written in a smaller, red, all-caps, sans-serif font.

beck-shop.de
DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

Insulin Signaling and the Control of PHAS-I Phosphorylation

John C. Lawrence Jr. and Gregory J. Brunn

1	Introduction	1
2	Mechanism of Translational Repression	1
3	PHAS Isoforms	3
4	Phosphorylation Sites in PHAS-I	5
4.1	Identification of Sites	6
4.2	Influence of Phosphorylation on the Electrophoretic Mobility of PHAS-I	6
4.3	Sites Involved in the Control of eIF4E Binding	7
4.4	Potential Mechanisms of Ordered Phosphorylation	8
5	Protein Kinases That Phosphorylate PHAS-I in Vitro	10
5.1	mTOR Protein	11
5.2	Protein Kinase C	15
5.3	Protein Kinase CK2	16
5.4	MAP Kinase	16
6	Control by Hormones, Nutrients, and cAMP	17
6.1	The Insulin Signaling Pathway	18
6.1.1	Insulin Receptor Substrate 1 (IRS-1)	18
6.1.2	Phosphatidyl Inositol 3-OH Kinase (PI 3-kinase)	18
6.1.3	Protein Kinase B	19
6.1.4	mTOR Phosphorylation	20
6.1.5	Tap42p and the $\alpha 4$ Protein	22
6.2	Regulation of PHAS-I by a Nutrient-Sensing Pathway	23
6.3	Regulation of PHAS-I Dephosphorylation	25
	References	26

Insulin, Phorbol Ester and Serum Regulate the Elongation Phase of Protein Synthesis

Jolinda A. Traugh

1	Introduction	33
2	Structure and Function of EF-1 and EF-2	33
3	Modifications of EF-1 and EF-2	37
4	Regulation of Elongation by Insulin Via Multipotential S6 Kinase and EF-2 Kinase	39

5	Regulation of Elongation by Phorbol Ester Via Protein Kinase C	42
6	Regulation of Elongation during the Cell Cycle by Cdc2	43
7	Lack of Regulation of Elongation by Protein Kinase Casein Kinase II	44
8	Conclusions	45
	References	45

Regulation of Protein Synthesis by Insulin Through IRS-1

Raul Mendez, Gavin Welsh, Miranda Kleijn, Martin G. Myers,
Morris F. White, Christopher G. Proud, and Robert E. Rhoads

1	Introduction	49
2	Materials and Methods	52
2.1	Cell Lines	52
2.2	Measurement of Protein and DNA Synthesis	53
2.3	MAPK, p70 ^{S6K} , PI3K and PKC Activity	53
2.4	Preparation of ³² P-Labeled eIF4E and PHAS-I	54
2.5	MAPK Depletion	54
2.6	Northern Blot Analysis	55
2.7	eIF2B and GSK-3 Activity	55
3	Results	55
3.1	Both IR and IRS-1 Are Required for Stimulation of Translation by Insulin in 32D Cells	55
3.2	MAPK Activation Is Necessary But Not Sufficient for Insulin-Stimulated Protein Synthesis	56
3.3	SHP-2 Attenuates the IRS-1 Signal	57
3.4	The Insulin Signal to Protein Synthesis Proceeds Through PI3K	59
3.5	The mTOR Branch Downstream of PI3K Stimulates Growth-Regulated Translation	62
3.6	The PKC ζ Branch Downstream of PI3K Stimulates General Translation	66
3.7	General Protein Synthesis Is Correlated with Inhibition of GSK-3 and Activation of eIF2B	71
4	Discussion	77
4.1	Insulin Receptor and Insulin Receptor Substrate-1	77
4.2	GRB-2/SOS Binding to IRS-1	77
4.3	SHP-2 Binding to IRS-1	78
4.4	PI3K Binding to IRS-1	79
4.5	The Rapamycin-Sensitive Branch Involves PKB and mTOR	79
4.6	The Rapamycin-Insensitive Branch Proceeds Through PKC ζ	80
4.7	Glycogen Synthase Kinase-3 and eIF2B	82
4.8	Protein Synthesis and Cell Proliferation	83

4.9	Pathway from Insulin to General and Growth-Related Protein Synthesis	84
	References	85

Regulation of Eukaryotic Initiation Factor eIF2B

Christopher G. Proud

1	Function and Structure of eIF2B	95
1.1	eIF2B Is a Guanine Nucleotide Exchange Factor	95
1.2	eIF2B Is a Heteropentameric Protein	95
1.3	eIF2B Is an Important Control Point for Translation Initiation	97
2	eIF2B Activity Can Be Regulated by the Phosphorylation of eIF2 α	97
3	Regulation of eIF2B Activity in Vivo	98
4	Mechanisms Involved in the "Direct" Regulation of eIF2B Activity	100
4.1	eIF2B May Be Regulated Allosterically and by Phosphorylation	100
4.2	eIF2Be Is a Substrate For GSK-3	100
4.3	Control of GSK-3 Activity	102
4.4	Regulation of Phosphorylation of the GSK-3 Site in eIF2Be ...	104
4.5	The Erk Pathway Can Also Modulate eIF2B Activity	104
5	Other Phosphorylation Sites in eIF2B	106
5.1	Phosphorylation of the Priming Site in eIF2Be	106
5.2	Phosphorylation Sites in eIF2Be in Vivo	107
5.3	Phosphorylation of eIF2B by Casein Kinases	107
5.4	Are Other Subunits of eIF2B Phosphorylated?	108
6	Other Inputs into the Control of eIF2B	109
7	Conclusions and Perspectives	110
	References	111

The p70 S6 Kinase Integrates Nutrient and Growth

Signals to Control Translational Capacity

Joseph Avruch, Christopher Belham, Qing-peng Weng, Kenta Hara, and Kazuyoshi Yonezawa

1	Identification of the p70 S6 Kinase	115
2	Expression and Structure	117
3	Substrate Specificity and Selection	120
4	Cellular Function(s)	122
4.1	The p70 S6 Kinase Controls Expression of the Translational Apparatus by Regulating Initiation of 5' Terminal Oligopyrimidine Sequence mRNAs	122
4.2	The p70 S6 Kinase Coordinates Cell Division with Cell Growth	125

5	Regulation of the p70 S6 Kinase	127
6	TOR Regulates Cell Function in Response to the Nutrient Milieu	128
7	p70 is Regulated by Multisite (Ser/Thr) Phosphorylation	132
8	RTK Recruitment of Type 1A PI-3 Kinases Activates p70 S6 Kinase	134
9	The Mechanism of p70 Activation by PI-3 Kinase and the Role of PDK1	135
10	Candidate "p70 Thr412 Kinases"	140
10.1	PDK1 As a p70 Thr412 Kinase	140
10.2	mTOR As a p70 Thr412 Kinase	141
10.3	A Novel Set of p70 Thr412 Kinases	145
11	Conclusion	145
	References	146

Regulation of Translation Initiation by Amino Acids in Eukaryotic Cells

Scot R. Kimball

1	Introduction	155
1.1	Pathway of Translation Initiation	155
2	Regulation by Amino Acids of met-tRNA _i Binding to 40 S Ribosomal Subunits	157
2.1	Regulation of met-tRNA _i Binding in <i>Saccharomyces</i> <i>cerevisiae</i>	157
2.1.1	Regulation of GCN4 mRNA Translation by Amino Acids	157
2.1.2	Roles of eIF2 and eIF2B in Translational Regulation of Gcn4p Expression by Amino Acids	159
2.1.3	Gcn2p Is an eIF2 α Kinase That Regulates Gcn4p Expression by Amino Acids	161
2.1.4	Model for the Translational Regulation of Gcn4p Expression by Amino Acids	162
2.2	Regulation of met-tRNA _i Binding in Mammalian Cells	163
3	Regulation of mRNA Binding to 40 S Ribosomal Subunits by Amino Acids	166
3.1	Modulation of 4E-BP1 and S6K1 Phosphorylation by Amino Acids	168
3.2	Signaling Pathways for Leucine-Mediated Changes in Translation Initiation	172
4	Is There Coordinated Regulation by Amino Acids of Translation Initiation and Elongation?	174
5	Summary	175
	References	177
