|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Preface .....                                                                                                                                                                | v   |
| List of Contributors .....                                                                                                                                                   | ix  |
| <br>                                                                                                                                                                         |     |
| 1 Epidemiological and Immunological Implications<br>of the Global Variability of HIV-1<br><i>Bette T. Korber, Brian Foley, Brian Gaschen, and Carla Kuiken</i> .....         | 1   |
| 2 Role of Chemokines and Their Receptors in the Pathogenesis<br>of HIV Infection<br><i>Frederick S. Lee, Gabriele Kuschert, Otto O. Yang,<br/>and Andrew D. Luster</i> ..... | 33  |
| 3 Cytokines and Chemokines in HIV Infection<br><i>Guido Poli</i> .....                                                                                                       | 53  |
| 4 Development and Reconstitution of T-Lymphoid Immunity<br><i>Krishna V. Komanduri and Joseph M. McCune</i> .....                                                            | 79  |
| 5 HIV Gene Products as Manipulators of the Immune System<br><i>Aram Mangasarian and Didier Trono</i> .....                                                                   | 109 |
| 6 Immune Response to Murine and Feline Retroviruses<br><i>Daniela Finke and Hans Acha-Orbea</i> .....                                                                        | 125 |
| 7 Immune Response to HTLV-I and HTLV-II<br><i>Samantha S. Soldan and Steven Jacobson</i> .....                                                                               | 159 |
| 8 HIV-Specific Neutralizing Antibodies<br><i>David C. Montefiori</i> .....                                                                                                   | 191 |
| 9 Cytotoxic T-Cell Responses in Acute and Chronic HIV-1 Infection<br><i>Hugo Soudeyns and Giuseppe Pantaleo</i> .....                                                        | 213 |
| 10 Characterization of the HIV-1-Specific T-Helper Cell Response<br><i>Bruce D. Walker</i> .....                                                                             | 237 |
| 11 Immune Responses to Nonhuman Primate Lentiviruses<br><i>Amitinder Kaur, Marie-Claire Gauduin,<br/>and R. Paul Johnson</i> .....                                           | 249 |
| 12 Intrahost Selective Pressure and HIV-1 Heterogeneity<br>During Progression to AIDS<br><i>Vladimir V. Lukashov and Jaap Goudsmit</i> .....                                 | 281 |
| 13 Polymorphism in HLA and Other Elements of the Class I and II<br>Response Pathways<br><i>Richard A. Kaslow and R. Pat Bucy</i> .....                                       | 297 |
| 14 Immunologic Approaches to the Therapy of Patients<br>with HIV Infection<br><i>H. Clifford Lane and Scott Seeley</i> .....                                                 | 317 |
| Index .....                                                                                                                                                                  | 331 |
