1	Introduction	1
1.1	Introduction	1
1.2	Historical Notes on Suspensions	3
1.3	Active and Semi-active Suspensions in the Scientific Literature	5
1.4	Comfort in a Vehicle	7
1.4.1	Comfort Assessment	10
1.5	Introduction to Controlled Dampers	10
1.6	Introduction to Friction Dampers	12
1.7	Introduction to MR Dampers	14
2	Dampers and Vehicle Modelling	17
2.1	Introduction	17
2.2	Phenomenology of Hysteresis	19
2.3	Damper Hysteresis Modelling	22
2.3.1	Bouc–Wen Model	24
2.3.1.1	Parameter A	24
2.3.1.2	Parameter γ	25
2.3.1.3	Parameter ν	26
2.3.1.4	Parameter n	26
2.4	Bouc–Wen Parameter Identification	27
2.5	Vehicle Ride Models	27
2.5.1	Quarter Car Model	29
2.5.2	Half Car Model	31
2.5.3	Full Car Model	32
2.5.4	Half Truck Model	36
2.6	Tyre Modelling	39
2.7	Road Modelling	40
3	Human Body Analysis	43
3.1	Introduction	43
3.2	Human Body Response	44

3.3	Hysteretic Damping	44
3.3.1	The Duffing Equation	45
3.3.2	Suppression of Jumps	46
3.4	Low-frequency Seated Human Model	48
3.4.1	Multi-frequency Input	49
3.5	Semi-active Control	51
3.6	State Observer	51
3.6.1	Luenberger State Observer	51
3.6.2	Simple State Observer	52
3.6.3	Ideal Control	53
3.7	Results	54
3.8	Seated Human with Head-and-Neck Complex	57
3.8.1	Driver Seat (Including Cushions)	58
3.8.2	Driver Body	59
3.8.3	Head-and-Neck Complex (HNC)	59
3.8.4	Analysis of the Head-and-Neck System	60
3.8.5	Head Accelerations During Avoidance Manoeuvre	64
4	Semi-active Control Algorithms	65
4.1	Introduction	65
4.2	PID Controllers	67
4.3	Adaptive Control	68
4.4	Robust Control	69
4.5	Balance, Skyhook and Groundhook	70
4.5.1	Balance Logic	70
4.5.2	Skyhook Logic	70
4.5.3	Groundhook Logic	70
4.5.4	Displacement-based On–Off Groundhook Logic	71
4.5.5	Hybrid Skyhook–Groundhook Logic	71
4.6	Balance Logic Analysis	72
4.7	Chattering Reduction Strategies	75
4.8	SA Vibration Control of a 1DOF System with Sequential Dry Friction	79
4.8.1	Sequential Damping Characteristics	81
4.8.2	Free Vibration: Phase Plane Trajectories	82
4.8.3	Free Vibration: Shock Absorbing Properties	83
4.8.4	Harmonically-Excited Vibration	85
4.8.4.1	Time Histories	85
4.8.4.2	Amplitude–Frequency Characteristics	85
4.8.5	Random Vibration	87
4.8.5.1	Simulation of White Noise Sample Functions	89
4.8.5.2	Numerical Solution of the Equation of Motion	91
4.8.5.3	Numerical Results	92
4.9	Stability of SA Control with Sequential Dry Friction	93
4.10	Quarter Car Response with Sequential Dry Friction	95
5	Friction Dampers	99
5.1	Introduction	99

5.2	Friction Force Modelling	99
5.2.1	Static Friction Models	100
5.2.2	Dynamic Friction Models	102
5.2.3	Seven-parameter Friction Model	102
5.3	The Damper Electrohydraulic Drive	104
5.4	Friction Damper Hydraulic Drive Modelling	107
5.4.1	Power Consumption	115
5.4.2	The Feedback Chain	115
5.5	Pilot Implementation of Friction Damper Control	116
5.6	Automotive Friction Damper Design	122
5.7	Switched State Feedback Control	126
5.8	Preliminary Simulation Results	129
5.9	Friction Damper Electrohydraulic Drive Assessment	141
5.10	Electrohydraulic Drive Parameters Validation	151
5.11	Performance Enhancement of the Friction Damper System	156
5.11.1	Damper Design Modification	157
5.11.2	Hydraulic Drive Optimisation	159
5.11.3	Friction Damper Controller Enhancement	161
6	Magnetorheological Dampers	165
6.1	Introduction	165
6.2	Magnetorheological Fluids	165
6.3	MR Fluid Devices	167
6.3.1	Basic Operating Modes	167
6.3.2	Flow Simulation	168
6.3.2.1	Pressure-driven Flow Mode with Either Pole Fixed	168
6.3.2.2	Direct Shear Mode with Relatively Movable Poles	177
6.3.2.3	Squeeze-film Mode	180
6.4	MR Damper Design	180
6.4.1	Input Data and Choice of the Design Solution	181
6.4.2	Selection of the Working MR Fluid	181
6.4.2.1	MR Fluid Figures of Merit	182
6.4.2.2	Choice of the MR Fluid	183
6.4.3	Determination of the Optimal Gap Size and Hydraulic Design	185
6.4.3.1	Controllable Force and Dynamic Range	185
6.4.3.2	Parameters of the Hydraulic Circuit	186
6.4.4	Magnetic Circuit Design	187
6.5	MRD Modelling and Characteristics Identification	189
6.5.1	Experimental Data	190
6.5.2	Parametric Model Simulation	192
6.5.3	Fuzzy-logic-based Model	200
6.5.4	Modelling the Variable Field Strength	203
6.5.5	GA-based Method for MR Damper Model Parameters Identification	209
7	Case Studies	219
7.1	Introduction	219

7.1.1	Some Aspects of Data Acquisition and Control	219
7.2	Car Dynamics Experimental Analysis	221
7.2.1	The Experimental Set-up	221
7.2.2	Post-processing and Measurement Results.....	224
7.2.3	Suspension Spring and Tyre Tests.....	229
7.3	Passively-Damped Car Validation.....	230
7.4	Case Study 1: SA Suspension Unit with FD.....	232
7.4.1	Frequency-domain Analysis	233
7.4.2	Time-domain Analysis	234
7.4.3	Semi-active System Validation.....	242
7.5	Case Study 2: MR-based SA Seat Suspension.....	245
7.5.1	Numerical Results	248
7.5.2	Conclusions	250
7.6	Case Study 3: Road Damage Reduction with MRD Truck Suspension.....	251
7.6.1	Introduction	251
7.6.2	Half Truck and MR Damper Model	252
7.6.3	Road Damage Assessment.....	255
7.6.4	Road Damage Reduction Algorithm	255
7.6.5	Time Response	256
7.6.6	Truck Response on Different Road Profiles	258
7.6.7	Truck Response to Bump and Pothole.....	262
7.6.8	Robustness Analysis.....	264
7.6.8.1	Trailer Mass Variation	266
7.6.8.2	Tyre Stiffness Variation.....	267
7.6.8.3	MRD Response Time.....	268
7.7	Conclusions.....	270
