

Table of Contents

Preface

Visible Light-Emitting Diodes - The Formative Years

J.W. Allen and H.G. Grimmeiss 1

Perspective on the Development of III-Nitrides for Optical Emitters

B. Monemar 17

Silicon Part

Dislocations in Silicon and D-Band Luminescence for Infrared Light Emitters

V.V. Kveder and M. Kittler 29

Dislocation Networks Formed by Silicon Wafer Direct Bonding

M. Reiche 57

Si- and SiGe-Based LEDs

N.A. Sobolev 79

SOI-LEDs with Carrier Confinement

T. Hoang, J. Holleman and J. Schmitz 101

MOS Light Emitting Devices Based on Rare-Earth Ion Implantation

L. Rebohle and W. Skorupa 117

Compound Part

Present Status of Deep UV Nitride Light Emitters

A. Khan and K. Balakrishnan 141

AlN and AlGa_N by MOVPE for UV Light Emitting Devices

H. Amano, M. Imura, M. Iwaya, S. Kamiyama and I. Akasaki 175

Nonpolar and Semipolar Orientations: Material Growth and Properties

H. Masui and S. Nakamura 211

Impact of Point Defects on the Luminescence Properties of (Al,Ga)N

S.F. Chichibu, A. Uedono, T. Onuma, S.P. DenBaars, U.K. Mishra, J.S. Speck and S. Nakamura 233

Assessment and Modification of Recombination Dynamics in In_xGa_{1-x}N-Based Quantum Wells

Y. Kawakami, A. Kaneta and M. Funato 249
