Part I. INTRODUCTION TO PATCH CLAMPING

Chapter 1

A Practical Guide to Patch Clamping

Reinhold Penner

1. Introduction	3
2. Patch-Clamp Techniques	4
2.1. The Patch-Clamp Configurations	5
2.2. Applications, Advantages, Problems	6
2.3. Special Techniques	7
3. The Patch-Clamp Setup	9
3.1. Mechanics	11
3.2. Optics	12
3.3. Micromanipulation	13
3.4. Amplifiers	14
3.5. Stimulators	14
3.6. Data Acquisition and Analysis	15
3.7. Grounding the Setup	16
4. Pipette Fabrication	17
4.1. Pipette Pullers	17
4.2. Pipette Microforges	17
4.3. Glass Capillaries	18
4.4. Pulling	18
4.5. Coating	18
4.6. Heat Polishing	19
4.7. Use of Pipettes	19
4.8. Pipette Holders	20
4.9. Reference Electrodes	20
5. Experimental Procedures	21
5.1. Preparing Experiments	21
5.2. Forming a Seal	21
5.3. Patch Recording	22
5.4. Whole-Cell Recording	24
6. Caveats and Sources of Artifacts	25
6.1. Solutions	26
6.2. Electrodes	27
6.3. Data Acquisition	28
References	28

Chapter 2

Tight-Seal Whole-Cell Recording

Alain Marty and Erwin Neher

- 1. Introduction. 31
- 2. Basic Procedures 31
- 3. The Whole-Cell Recording Configuration from an Electrical Point of View 33
 - 3.1. The Equivalent Circuit for a Simple Cell. 33
 - 3.2. Series Resistance Errors 34
 - 3.3. Cell Capacitance Cancellation. 35
 - 3.4. Series Resistance Compensation. 35
 - 3.5. Capacitance Cancellation Together with Series Resistance Compensation 37
 - 3.6. Current Clamp. 38
 - 3.7. Noise 38
 - 3.8. Equivalent Circuit for a Complex Cell. 39
- 4. The Whole-Cell Recording Configuration from a Chemical Point of View 42
 - 4.1. Modeling Diffusion between Pipette and Cell Compartments 42
 - 4.2. A Solution for a Two-Compartment Model. 42
 - 4.3. Extension to Multicompartment Cells 44
 - 4.4. Pipette Filling Solutions for WCR. 45
 - 4.5. Perforated Patch Recording 45
 - 4.6. Changes in Effective Membrane Voltage during WCR 47
- 5. Comparison of Whole-Cell Recording with Other Electrophysiological Methods to Record from Cells 50
- References 51

Chapter 3

Guide to Data Acquisition and Analysis

Stefan H. Heinemann

- 1. Introduction. 53
 - 1.1. Levels of Analysis 54
 - 1.2. Analysis Starts before the Experiment 55
- 2. Data Acquisition and Preanalysis 56
 - 2.1. Data Acquisition 56
 - 2.2. Data Storage and Retrieval 61
 - 2.3. Interface to Other Programs. 63
- 3. Single-Channel Analysis 63
 - 3.1. Data Preparation 64
 - 3.2. Event Detection 65
 - 3.3. Analysis of Histograms. 67
 - 3.4. Open-Channel Analysis. 71
- 4. Analysis of Macroscopic Currents 74
 - 4.1. Parameter Control in Relaxation Experiments 74
 - 4.2. Signal Averaging and Leak Correction. 75

4.3. Relaxation Experiments.	77
4.4. Noise Analysis.	80
5. Multipurpose Programs	82
5.1. Data Presentation	82
5.2. Data Administration	83
5.3. Table Calculations	83
5.4. Curve-Fitting Programs with Programming Capabilities	83
6. Choices for Hardware and Software	83
6.1. Criteria for the Selection of Hardware	85
6.2. Criteria for the Selection of Software	87
References	90

Part II. METHODS

Chapter 4

Electronic Design of the Patch Clamp

F. J. Sigworth

1. Introduction.	95
2. Current-Measurement Circuitry.	95
2.1. Current–Voltage Converter	95
2.2. Dynamics of the I – V Converter	97
2.3. Correcting the Frequency Response	100
2.4. Capacitor-Feedback I – V Converter.	103
3. Background Noise in the Current–Voltage Converter.	107
3.1. Noise in the Feedback Resistor	107
3.2. Noise in the Amplifier	109
3.3. Example of a Low-Noise Amplifier Design	114
3.4. Summary of Noise Sources	116
4. Capacitance Transient Cancellation	117
4.1. Overload Effects in the Patch Clamp	117
4.2. Fast Transient Cancellation	118
4.3. Slow Transient Cancellation	119
5. Series Resistance Compensation	120
5.1. Theory	121
5.2. Effect of Fast Transient Cancellation	124
5.3. Incorporating Slow Transient Cancellation	124
References	126

Chapter 5

Low-Noise Recording

Klaus Benndorf

1. Introduction.	129
--------------------------	-----

2. Types of Noise	129
2.1. Current Noise Generated by Thermal Voltage Noise	130
2.2. Shot Noise	132
2.3. $1/f$ Noise	132
3. A Strategy for Reducing Noise	132
3.1. Holder and Pipette Capacitance	132
3.2. Capacitance of the Immersed Pipette Tip.	133
3.3. Pipette Resistance	133
3.4. Dielectric Loss.	135
3.5. Pore Diameter	137
3.6. Fluid Films	139
4. Measured Noise.	139
5. Perspectives	140
6. Noise-Dependent Resolution Limits of Channel-Open Time	141
6.1. The Half-Amplitude Threshold Technique	141
6.2. The Baseline Method.	141
7. Appendix.	144
7.1. Fabrication of Small-Pore Patch Pipettes.	144
7.2. Interfering Signals	145
References	145

Chapter 6

Voltage Offsets in Patch-Clamp Experiments

Erwin Neher

1. Introduction.	147
2. Analysis of the Offset Problem.	147
3. Three Strategies for Handling the Offset Problem	149
3.1. <i>A Posteriori</i> Correction.	149
3.2. On-Line Correction	150
3.3. On-Line Correction Using a Computer-Controlled Patch-Clamp Amplifier	151
4. Conclusions.	152
References	153

Chapter 7

Techniques for Membrane Capacitance Measurements

Kevin D. Gillis

1. Introduction.	155
1.1. Sample Recordings of Membrane Capacitance	156
1.2. The Equivalent Circuit of a Cell in the Patch-Clamp Recording Configuration	156
1.3. Parameter Estimation Using Capacity Transient Neutralization Circuitry of Patch-Clamp Amplifiers	158
1.4. Types of Voltage-Clamp Stimuli Used to Measure Membrane Capacitance	159

2. Square-Wave Stimulation: The “Time Domain” Technique	160
2.1. Electronic Transient Neutralization Approximates a Three-Element Network with Two Elements	161
3. Sinusoidal Excitation	162
3.1. Introduction to Complex Impedance Analysis	162
3.2. Parameter Estimation from Basic Circuit Analysis: The Lindau–Neher Technique	166
3.3. Piecewise-Linear Techniques for Estimating Changes in Membrane Capacitance	169
4. Stimulation with Signals Containing Multispectral Components	176
4.1. Stimulation with Two Sinusoids	176
4.2. Stimulation with a Pseudorandom Binary Sequence	177
5. Resolution Limits of Membrane Capacitance Measurements	177
5.1. Thermal (Johnson) Noise Limits the Resolution of C_m Measurements . . .	178
5.2. Excess Noise Sources	181
5.3. Results of Noise Measurements	185
6. Practical Application, Hints, and Warnings	187
6.1. Choosing the Technique	187
6.2. The Recording Configuration	189
6.3. Suggestions for Low-Noise Recording	190
6.4. Some Sources of Errors and Artifacts	191
Appendix A. Phase-Sensitive Detection	194
Appendix B. Derivation of Equation 38	196
References	197

Chapter 8

Patch-Pipette Recordings from the Soma, Dendrites, and Axon of Neurons in Brain Slices

Bert Sakmann and Greg Stuart

1. Introduction	199
2. Preparation of Brain Slices	199
2.1. Preparation of Tissue for Slicing	200
2.2. Slicing	200
2.3. Incubation of Slices	201
2.4. Mechanical Fixation of the Slice for Recording	202
3. Visualization of Nerve Cells Using IR-DIC	202
3.1. Optical Setup	202
3.2. Mechanical Setup	203
3.3. Viewing with IR-DIC	204
4. The “Blow and Seal” Technique	204
4.1. Patch-Pipette Techniques	204
4.2. Verification of Dendritic or Axonal Recordings	207
4.3. Problems Associated with Recording from Small Neuronal Structures . . .	207

5. Examples of Recordings from Dendrites	208
5.1. Cell-Attached Patch Recordings	208
5.2. Whole-Cell Recordings	208
5.3. Outside-Out Patch Recordings	208
5.4. Two-Pipette Recordings	209
6. Discussion and Conclusions	210
References	211

Chapter 9

Patch Clamp and Calcium Imaging in Brain Slices

Jens Eilers, Ralf Schneggenburger, and Arthur Konnerth

1. Introduction.	213
2. Setup.	213
2.1. Single-Photomultiplier Detector System	214
2.2. Imaging of Changes in Intracellular Calcium Concentration	215
2.3. Patch-Clamp and Confocal Microscopy in Brain Slices	216
3. Procedures and Techniques.	217
3.1. Pipette Solutions and Indicator Dyes.	217
3.2. Dye-Loading Procedures	219
3.3. Background Subtraction	219
3.4. Calibration Procedures for Ratiometric Calcium Measurements	221
3.5. Dye Bleaching and Phototoxic Damage	221
4. Examples and Applications	222
4.1. Changes in $[Ca^{2+}]_i$ in Soma and Dendrites of Hippocampal Pyramidal Neurons	222
4.2. Calcium Flux Measurements	223
4.3. Localized Dendritic Calcium Signals	225
References	227

Chapter 10

Fast Application of Agonists to Isolated Membrane Patches

Peter Jonas

1. Introduction and History	231
2. Application Pipettes	233
2.1. Theta Glass Tubing	233
2.2. Pulling and Breaking.	234
2.3. Tubing Connectors	234
2.4. Mounting the Application Pipette to the Piezo Translator	234
2.5. Mounting the Piezo Translator to the Setup	235
2.6. Perfusion of Application Pipettes	235
2.7. Cleaning of Application Pipettes	236
2.8. Sharpness of the Interface	236
3. Piezoelectric Elements and Power Supplies	236
3.1. Piezoelectric Elements	236
3.2. Power Supplies	237

4. Tests of the Reliability of Solution Exchange	237
4.1. Open-Tip Response	237
4.2. Mapping out the Optimal Position.	239
4.3. Test at an Intact Membrane Patch	240
4.4. Influence of Patch Size and Geometry on Solution Exchange Time	240
4.5. Vibrations and Charging Artifacts	240
5. Examples	242
References	242

Chapter 11

Electrochemical Detection of Secretion from Single Cells

Robert H. Chow and Ludolf von Rüden

1. Introduction.	245
2. Principles.	249
2.1. Electrochemical Detection	249
2.2. Quantitative Electrochemistry	250
2.3. Voltammetric Techniques	250
2.4. A Little Diffusion Theory.	253
3. Setup.	257
3.1. Electrodes	257
3.2. Instrumentation	261
3.3. Recording Configuration	262
4. Experimental Considerations and Analysis	264
4.1. Amperometry	264
4.2. Cyclic Voltammetry	267
5. Conclusions and Prospects	268
Appendix	269
References	272

Chapter 12

Technical Approaches to Studying Specific Properties of Ion Channels in Plants

Rainer Hedrich

1. Introduction: Why Do Plants Need Ion Channels?	277
1.1. Solute Transport	277
1.2. Nonchannel Solute Transporters.	284
1.3. Water Channels: Transporting the Solvent	285
2. Experimental Procedures.	285
2.1. The Plasma Membrane	286
2.2. Endomembranes	291
2.3. Patch-Clamp Configurations Applicable to Different Plant Membranes	295
2.4. Heterologous Expression	297
2.5. Heterologous Expression of Animal Transporters in Plants	298
3. Outlook	300
References	300

Chapter 13

The Giant Membrane Patch

Donald W. Hilgemann

1. Introduction	307
2. Giant-Patch Methods	307
2.1. Pipette Preparation	307
2.2. Pipette Coating	310
2.3. Membrane Blebbing	311
2.4. Seal Formation: Small Cells and Blebbed Cells.	311
2.5. Seal Formation: Inside-Out Oocyte Patches	313
2.6. Seal Formation: Outside-Out Oocyte Patches.	315
2.7. Pipette Perfusion.	315
2.8. Measurement of Membrane Patch Capacitance	318
3. Giant-Patch Recording.	319
3.1. Patch-Clamp Speed	319
3.2. Fast Solution Switching	320
3.3. Single-Channel Recording	321
3.4. Manipulation of Patch Membrane Composition.	322
3.5. Neuronal Calcium Current and the Status of Cytoskeleton in Giant Patches	324
4. Perspectives	326
References	326

Chapter 14

A Fast Pressure-Clamp Technique for Studying Mechanogated Channels

Don W. McBride, Jr., and Owen P. Hamill

1. Introduction.	329
2. Summary of Methods for Activating Single MG Channels	330
3. Mechanical Arrangement of the Improved Pressure Clamp	331
4. Electronic Control of the Pressure Clamp	333
5. Performance of the Improved Clamp	335
6. Theoretical Constraints on the Speed and Noise of the Pressure Clamp	337
7. Pressure-Clamp Use for Sealing Protocols.	338
References	339

Chapter 15

Electrophysiological Recordings from *Xenopus* Oocytes

Walter Stühmer and Anant B. Parekh

1. Introduction.	341
1.1. The Oocyte Expression System	341
1.2. Advantages of the Oocyte System.	341
1.3. Disadvantages of the Oocyte System	342

2. Procedures and Techniques.	343
2.1. Isolation of Single Oocytes	343
2.2. Injection of Oocytes	346
2.3. Recordings	348
3. Endogenous Currents to the Oocyte.	352
3.1. Ca^{2+} -Activated Cl^- Channel.	352
3.2. Voltage-Dependent Ca^{2+} Channel	353
3.3. Pool-Depletion-Activated Current	353
3.4. Stretch-Activated Channels	353
3.5. Na^+ Channels	354
3.6. K^+ Channels	354
4. Applications	354
4.1. Properties of Ion Channels	354
4.2. Ca^{2+} Signaling	355
4.3. Secretion	355
References	355

Chapter 16

Polymerase Chain Reaction Analysis of Ion Channel Expression in Single Neurons of Brain Slices

Hannah Monyer and Peter Jonas

1. Introduction.	357
2. Cell Identification, Recording, Harvesting, and Expelling.	358
2.1. Whole-Cell Configuration.	358
2.2. Harvesting of Cell Content	360
2.3. Expelling	361
3. Molecular Analysis of mRNA Expression.	363
3.1. cDNA Synthesis	363
3.2. PCR Amplification	364
3.3. Cloning of the PCR Product	367
3.4. Plaque Quantification.	368
4. Example	369
References	373

Chapter 17

Force Microscopy on Membrane Patches: A Perspective

J. K. Heinrich Hörber, Johannes Mosbacher, and Walter Häberle

1. Introduction.	375
2. Force Microscopy	377
3. Force Microscopy on Whole Cells	380
4. Force Microscopy on Excised Patches	383
4.1. Construction of the Setup.	383
4.2. Experimental Procedures	385

4.3. Outlook	392
References	392

Part III. ANALYSIS

Chapter 18

The Principles of the Stochastic Interpretation of Ion-Channel Mechanisms

David Colquhoun and Alan G. Hawkes

1. The Nature of the Problem.	397
1.1. Reaction Mechanisms and Rates	397
1.2. Rate Constants and Probabilities	399
1.3. Fractal and Diffusion Models	400
2. Probabilities and Conditional Probabilities.	401
3. The Distribution of Random Time Intervals	403
3.1. The Lifetime in an Individual State	403
3.2. Another Approach to the Exponential Distribution	405
3.3. Generalizations	406
3.4. Relationship between Single-Channel Events and Whole-Cell Currents	407
3.5. Pooling States That Equilibrate Rapidly	408
4. A Mechanism with More Than One Shut State: The Simple Open Ion Channel-Block Mechanism	409
4.1. A Simple Ion Channel-Block Mechanism	409
4.2. Relaxation and Noise.	409
4.3. Open Lifetimes of Single Channels	411
4.4. Shut Lifetimes of Single Channels.	412
4.5. Bursts of Openings.	412
4.6. The Number of Openings per Burst	414
4.7. Lifetime of Various States and Compound States	416
4.8. Derivation of Burst Length Distribution for the Channel-Block Mechanism	418
5. A Simple Agonist Mechanism	420
5.1. Shut Times	420
5.2. Bursts of Openings.	421
5.3. Effective Openings.	422
5.4. Macroscopic Currents	423
6. Some Fallacies and Paradoxes	424
6.1. The Waiting Time Paradox	424
6.2. The Unblocked Channel Fallacy.	426
6.3. The Last Opening of a Burst Fallacy	426
6.4. The Total Open Time per Burst Paradox	427
7. Reversible and Irreversible Mechanisms.	427
7.1. A Simple Example	428
7.2. Distribution of the Lifetime of an Opening.	429
7.3. Probabilities of Particular Sequences of Transitions when the Open States Are Distinguishable	430

8. The Problem of the Number of Channels	431
8.1. Estimation of the Number of Channels.	432
8.2. Evidence for the Presence of Only One Channel	433
8.3. Use of Shut Periods within Bursts.	436
9. Distribution of the Sum of Several Random Intervals	436
9.1. The Sum of Two Different Exponentially Distributed Intervals.	436
9.2. The Distribution of the Sum of n Exponentially Distributed Intervals.	438
9.3. The Distribution of a Random Number of Exponentially Distributed Intervals	439
10. Correlations and Connectivity	440
10.1. Origins of Correlations	440
10.2. Measurement and Display of Correlations	441
10.3. Correlations as a Test of Markov Assumptions	442
10.4. Two-Dimensional Distributions	442
10.5. The Decay of Correlations	445
10.6. Spurious Correlations.	445
11. Single Channels and Macroscopic Currents after a Jump	445
11.1. Single Channels after a Jump in the Absence of Correlations	446
11.2. Single Channels after a Jump in the Presence of Correlations	448
11.3. The Relationship between Single-Channel Currents and Macroscopic Currents	448
12. The Time Interval Omission Problem	453
12.1. Definition of the Problem.	453
12.2. The Two-State Case	455
12.3. The General Markov Model.	457
12.4. Joint Distributions of Adjacent Intervals	460
12.5. Maximum-Likelihood Fitting	461
13. A More General Approach to the Analysis of Single-Channel Behaviour	464
13.1. Specification of Transition Rates	464
13.2. Derivation of Probabilities	465
13.3. The Open-Time and Shut-Time Distributions.	466
13.4. A General Approach to Bursts of Ion-Channel Openings	468
13.5. Some Conclusions from the General Treatment.	473
13.6. Distributions following a Jump	474
13.7. Time Interval Omission and Maximum-Likelihood Fitting.	476
14. Concluding Remarks	478
References	479

Chapter 19

Fitting and Statistical Analysis of Single-Channel Records

David Colquhoun and F. J. Sigworth

1. Introduction.	483
2. Acquiring Data	484
2.1. Pulsed and Continuous Recordings	484
2.2. Filtering the Data	484
2.3. Digitizing the Data.	487
3. Finding Channel Events	489
3.1. Description of the Problem	490

3.2.	Choosing the Filter Characteristics	491
3.3.	Setting the Threshold.	495
3.4.	Practical Event Detection	497
4.	Characterizing Single-Channel Events.	498
4.1.	Half-Amplitude Threshold Analysis	499
4.2.	Direct Fitting of the Current Time Course	503
4.3.	Event Characterization Using a Computer	510
5.	The Display of Distributions	514
5.1.	Histograms and Probability Density Functions	514
5.2.	Missed Events: Imposition of a Consistent Time Resolution	522
5.3.	The Amplitude Distribution.	525
5.4.	The Open and Shut Lifetime Distributions	532
5.5.	Burst Distributions	534
5.6.	Cluster Distributions	537
5.7.	Measurement and Display of Correlations	538
5.8.	Distributions following a Jump: Open Times, Shut Times, and Bursts	540
5.9.	Tests for Heterogeneity.	542
6.	The Fitting of Distributions	543
6.1.	The Nature of the Problem	543
6.2.	Criteria for the Best Fit.	545
6.3.	Optimizing Methods	547
6.4.	The Minimum- χ^2 Method.	551
6.5.	The Method of Maximum Likelihood: Background	552
6.6.	Maximum Likelihood for a Simple Exponential Distribution.	553
6.7.	Errors of Estimates: The Simple Exponential Case	555
6.8.	Maximum-Likelihood Estimates: The General Case.	558
6.9.	Errors of Estimation in the General Case.	563
6.10.	Numerical Example of Fitting of Exponentials	566
6.11.	Effects of Limited Time Resolution	568
6.12.	Direct Fitting of Mechanisms	569
6.13.	Fitting the Results after a Jump	570
Appendix 1.	Choice of the Threshold for Event Detection	571
Appendix 2.	The Expected Distribution of Fitted Amplitudes	574
Appendix 3.	Numerical Techniques for Single-Channel Analysis	576
A3.1.	A Digital Gaussian Filter	576
A3.2.	Cubic Spline Interpolation	580
A3.3.	Error Function Evaluation.	585
A3.4.	A Calling Routine for AMOEBA	585
References	585

Chapter 20

A Q-Matrix Cookbook: How to Write Only One Program to Calculate the Single-Channel and Macroscopic Predictions for Any Kinetic Mechanism

David Colquhoun and Alan G. Hawkes

1.	Introduction.	589
----	-----------------------	-----

2. Basic Notation and a Particular Mechanism	591
2.1. A Five-State Mechanism	592
2.2. The Q Matrix	593
3. Equilibrium State Occupancies	594
3.1. The Determinant Method	595
3.2. The Matrix Method	595
4. Relaxation to Equilibrium	597
4.1. General Solutions for the Rate of Approach to Equilibrium	597
4.2. Evaluation of $\mathbf{p}(t)$ as a Sum of Exponential Components	598
4.3. Expressing the Coefficients as Scalars	599
4.4. The Current through a Channel	600
4.5. Numerical Results	601
4.6. Example of a Concentration Jump.	602
5. Distribution of Open Times and Shut Times.	603
5.1. Distribution of Open Times	603
5.2. Distribution of Shut Times	605
6. Distribution of the Number of Openings per Burst	607
7. Distribution of Burst Length	610
7.1. Comparison with Relaxation	611
7.2. Total Open Time per Burst	612
8. Channel Openings after a Jump	612
9. Calculating the Exponential of a Matrix.	613
9.1. Functions of a Matrix	613
9.2. Calculation of the Spectral Matrices	615
9.3. Other Exponentials.	616
9.4. Calculation of Spectral Matrices Using the NAG Library	616
9.5. Calculation of Matrix Exponentials Using MAPLE.	618
9.6. Calculation of Spectral Matrices and Matrix Exponentials Using MATHEMATICA	619
9.7. Another Way to Calculate the Exponential of a Matrix	620
9.8. Further Mathematical Notes.	621
10. Time Interval Omission	622
11. Concluding Remarks	622
Appendix 1. A Brief Introduction to Matrix Notation	623
A1.1. Elements of a Matrix	623
A1.2. Vectors	623
A1.3. Equality of Matrices	623
A1.4. Addition and Subtraction of Matrices	624
A1.5. Multiplication of Matrices	624
A1.6. Some More Examples of Matrix Multiplication	625
A1.7. The Identity Matrix.	626
A1.8. Determinants.	626
A1.9. “Division” of Matrices	627
A1.10. Differentiation of a Matrix.	628
A1.11. Transpose of a Matrix	628
A1.12. Eigenvalues and Eigenvectors of a Matrix.	628

Appendix 2. Some APL Code	632
References	633

Part IV. “CLASSICS”

Chapter 21

Geometric Parameters of Pipettes and Membrane Patches

Bert Sakmann and Erwin Neher

1. Introduction.	637
2. Geometry of Patch Pipettes	637
2.1. Tip Shape of Soft Glass Pipettes	637
2.2. Tip Shape of Hard Glass Pipettes	639
2.3. Tip Shape of Thick-Walled Pipettes	640
3. Geometry of Membrane Patches	643
3.1. Patch Area by Observation in the Light Microscope	643
3.2. Patch Area as Measured by Patch Capacitance	645
4. Conclusions.	649
References	650

Chapter 22

Conformational Transitions of Ionic Channels

P. Läuger

1. Introduction.	651
2. Two-State Channel with a Single Binding Site.	652
2.1. Concentration Dependence of Conductance.	654
2.2. Carrier-like Behavior of Channels	656
2.3. Single-Channel Currents with Rectifying Behavior	657
3. Nonequilibrium Distribution of Long-Lived Channel States.	658
4. Current Noise in Open Channels	660
5. Conclusion	661
References	662
