

Quantum (Un)speakables

From Bell to Quantum Information

Bearbeitet von
R.A Bertlmann, A Zeilinger

1. Auflage 2002. Buch. XXII, 485 S. Hardcover
ISBN 978 3 540 42756 8
Format (B x L): 15,5 x 23,5 cm
Gewicht: 1960 g

[Weitere Fachgebiete > Physik, Astronomie > Angewandte Physik > Statistische
Physik, Dynamische Systeme](#)

schnell und portofrei erhältlich bei

The logo for beck-shop.de features the text 'beck-shop.de' in a bold, red, sans-serif font. Above the 'i' in 'shop' are three red dots of increasing size. Below the main text, 'DIE FACHBUCHHANDLUNG' is written in a smaller, red, all-caps sans-serif font.

beck-shop.de
DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

Part I John S. Bell – The Man

1 Some Reminiscences

Mary Bell	3
-----------------	---

2 John Bell in Belfast: Early Years and Education

Andrew Whitaker	7
-----------------------	---

2.1 Introduction	7
2.2 Family and Early Life	7
2.3 Queen’s University as a Technician	8
2.4 A Student at Queen’s	10
2.5 Early Ideas on Quantum Theory	14
2.6 John Bell and Michael Faraday	18

3 My Interaction with John Bell

Bernard d’Espagnat	21
--------------------------	----

4 Magic Moments: A Collaboration with John Bell

Reinhold A. Bertlmann	29
-----------------------------	----

4.1 Prologue	29
4.2 Duality in Hadronic Reactions	30
4.2.1 Hadron Production in e^+e^- Collisions	30
4.2.2 Duality	32
4.3 Nonrelativistic Potential Theory	32
4.3.1 Résumé	34
4.4 Magic Moments	35
4.4.1 Moments	37
4.4.2 Ground State	38
4.4.3 Balance	39
4.5 Equivalent Potential	40
4.6 Epilogue	42

Part II Tests of Bell’s Inequalities

5 John S. Bell: Some Reminiscences and Reflections

Abner Shimony	51
5.1 Why was Bell the Discoverer of Bell’s Theorem?	51
5.2 Some Reminiscences	55
5.3 In What Direction Does Bell’s Theorem Point?	57

6 Early History of Bell’s Theorem

John F. Clauser	61
6.1 Introduction	61
6.2 An Unresolved Issue Left by the Founding Fathers	63
6.3 An Untidy Legacy Left by the Founders of Quantum Mechanics ..	66
6.4 Evangelical Theoreticians Dominate	69
6.5 The Development of a “Stigma”	71
6.6 Challenging the Common Wisdom	74
6.7 John Bell Unravels the Confusion	75
6.8 Theoretical Truth Versus Experimental Truth	77
6.9 Beware of the Experimentalists Lurking About	81
6.10 Generalization of the Bell and CHSH Results to Constrain Local Realism and Space-Time	82
6.11 Common Confusion About Count-Rate Normalization	87
6.12 Bell’s Response to CH and “Local Beables”	88
6.13 The Quantum-Optics Community Encounters Related Problems ..	89
6.14 Splitting Photons?	91
6.15 Remaining Locality Loopholes	94
6.16 Conclusions	96

7 On Four Decades of Interaction with John Bell

Michael Horne	99
---------------------	----

**8 Atom Based Tests of the Bell Inequalities –
the Legacy of John Bell Continues ...**

Edward S. Fry and Thomas Walther	103
8.1 Historical Overview	103
8.2 The Bell–Clauser–Horne Inequality	106
8.3 Loopholes	107
8.3.1 The First Loophole	107
8.3.2 The Second Loophole	108
8.3.3 The Third Loophole	108
8.4 Atom Based Experiments	109
8.4.1 The Paris Experiments	109

8.4.2	The Boulder Experiments	110
8.4.3	The Texas A&M Experiment	111
8.5	Summary	116
9	Bell's Theorem: The Naive View of an Experimentalist	
	Alain Aspect	119
9.1	Introduction	119
9.2	Why Have Supplementary Parameters?	
	The Einstein–Podolsky–Rosen–Bohm Gedankenexperiment	121
9.2.1	Experimental Scheme	121
9.2.2	Correlations	122
9.2.3	Difficulty of an Image	
	Derived from the Formalism of Quantum Mechanics	123
9.2.4	Supplementary Parameters	124
9.3	Bell's Inequalities	125
9.3.1	Formalism	125
9.3.2	A (Naive) Example	
	of the Supplementary-Parameter Theory	126
9.3.3	The Inequalities	127
9.4	Conflict with Quantum Mechanics	128
9.4.1	Evidence	128
9.4.2	Maximum Conflict	129
9.5	Discussion: The Locality Condition	130
9.6	Gedankenexperiment with Variable Analyzers:	
	The Locality Condition as a Consequence of Einstein's Causality .	131
9.7	From Bell's Theorem to a Realistic Experiment	133
9.7.1	Experimentally Testing Bell's Inequalities	133
9.7.2	Sensitive Situations Are Rare	133
9.7.3	Production of Pairs of Photons in an EPR State	134
9.7.4	Realistic Experiment	135
9.7.5	Timing Conditions	136
9.8	First-Generation Experiments	136
9.8.1	Experiments with a One-Channel Polarizer	136
9.8.2	Results	137
9.9	Orsay Experiments (1980–1982)	138
9.9.1	The Source	138
9.9.2	Detection–Coincidence Counting	139
9.9.3	Experiment with One-Channel Polarizers	140
9.9.4	Experiment with Two-Channel Analyzers	141
9.9.5	Timing Experiment	143
9.10	Third Generation: Experiments with Pairs of Photons	
	Produced in Parametric Down Conversion	146
9.11	Conclusion	149

10 Bell's Theorem for Space-Like Separation

Gregor Weihs	155
10.1 From Gedanken to Real Experiments	155
10.2 Efficiency	156
10.2.1 Reducing the Required Efficiency	157
10.2.2 State of the Art and Development of Optical Experiments	158
10.2.3 A Proposal Using Mercury Atoms	158
10.2.4 Closure of the Detection Efficiency Loophole with an Ion Trap Experiment	159
10.3 Locality	159
10.3.1 Experiments with Large Separation Between Measurement Stations	160
10.3.2 Analyzer Switching	161

11 The EPR Paradox in Massive Systems or about Strange Particles

Reinhold A. Bertlmann, Walter Grimus and Beatrix C. Hiesmayr	163
11.1 Introduction	164
11.2 The Bell-CHSH Inequality for Photons and for Kaons	164
11.3 A Neutral Kaon Introduces Itself	167
11.4 The Experiment at CERN and Possible Decoherence	169
11.5 The Generalized Bell Inequality and Unitary Time Evolution	175
11.5.1 The Choice of the Strangeness Eigenstate	178
11.5.2 The Choice Sensitive to the CP Violating Parameter, ε ..	178
11.6 Connection of the Bell Inequality and the Decoherence Approach ..	179
11.7 Final Remark	180

Part III Quantum Information

12 Are There Measurements?

Stig Stenholm	185
12.1 An Encounter with John Bell	185
12.2 Measurements or Not?	187
12.3 Describing a Measurement	189
12.4 How to Map Reality	193
12.5 Conclusion	196

13 Sundays in a Quantum Engineer's Life

Nicolas Gisin	199
13.1 I am a Quantum Engineer, but on Sundays I Have Principles	199
13.2 Quantum Cryptography on Sundays	199
13.3 Let's Assume That the Collapse Is Real	201

13.4 ... and Relativity?	204
13.5 Conclusion	206
14 Secret Sides of Bell's Theorem	
Artur Ekert	209
14.1 Is the Bell Theorem of any Practical Use?	209
14.2 Is There a Perfect Cipher?	210
14.3 Quantum Key Distribution	213
14.4 Eavesdropping Revisited	216
14.5 Quantum Privacy Amplification	218
14.6 Concluding Remarks	219
15 An Impossible Necklace	
Lev Vaidman	221
16 Multi-Photon Entanglement and Quantum Non-Localities	
Jian-Wei Pan and Anton Zeilinger	225
16.1 Introduction	225
16.2 The GHZ Theorem	226
16.3 Experimental Multi-Photon GHZ Entanglement	229
16.4 Experimental Test of Quantum Non-Localities	233
16.5 Discussions and Prospects	237
17 Bell's Theorem, Information and Quantum Physics	
Anton Zeilinger	241
17.1 Introduction	241
17.2 Information and Interference	242
17.3 Information and Entanglement	244
17.4 Bell's Theorem, Quantum Communication and Quantum Information	246
17.4.1 Quantum Dense Coding	246
17.4.2 Quantum Teleportation	248
17.4.3 Teleportation of Entanglement	249
17.4.4 Quantum Cryptography	251
17.5 John Bell's Desiderata and the Interpretation of Quantum Mechanics	252

Part IV Quantum Ideas

18 The Geometry of the Quantum Paradoxes	
John Conway and Simon Kochen	257
18.1 Introduction	257
18.2 Old Paradoxes	258

18.3 New Paradoxes and Their Geometry	262
18.4 Reconstructing Quantum Mechanics	267
19 Whose Knowledge?	
N. David Mermin	271
20 The History of the GHZ Paper	
Daniel M. Greenberger	281
21 John Stewart Bell and the Dynamical Reduction Program	
GianCarlo Ghirardi	287
21.1 John Stewart Bell and His Role	288
21.2 His Role Before 1985	289
21.3 The Birth of Dynamical Reduction Theories	291
21.3.1 Stochastic Equations for the Description of Decay Processes	291
21.3.2 Stochastic Differential Equations	291
21.3.3 The Breakthrough – Quantum Mechanics with Spontaneous Localizations	292
21.4 His Role Immediately After the Publication of Our Paper	293
21.4.1 The Letter	294
21.4.2 The Paper: Are There Quantum Jumps?	296
21.4.3 The Relativistic Issue	297
21.5 From QMSL to Continuous Spontaneous Localization (CSL)	298
21.6 The Subsequent Role of J.S. Bell in the Dynamical Reduction Program	301
21.6.1 Problems of Interpretation	301
21.6.2 The Relativistic Program	302
21.7 Concluding Remarks	303
22 How Does God Play Dice?	
(Pre-)Determinism at the Planck Scale	
Gerard 't Hooft	307
22.1 Dice	307
22.2 Quantum Interference	314
22.3 Quantum Coherence and Entanglement	314
22.4 The Einstein–Rosen–Podolsky Paradox and the Violation of the Bell Inequalities	315

Part V Quantum Specials

23 John Bell, State Reduction, and Quanglement

Roger Penrose 319

23.1 Encounters with John Bell 319

23.2 Gravitationally Induced State Reduction: A Minimalist View . . . 321

23.3 Quanglement 326

**24 Interferometry with Macromolecules:
Quantum Paradigms Tested in the Mesoscopic World**

Markus Arndt, Olaf Nairz, Anton Zeilinger 333

24.1 A Prototype Quantum Experiment 333

24.2 Interference of Fullerenes 336

24.3 Decoherence 340

24.3.1 Vibrational Transitions 342

24.3.2 Emission of Blackbody Radiation 343

24.3.3 Absorption of Blackbody Radiation 344

24.3.4 Rayleigh Scattering of Thermal Radiation 344

24.3.5 Fragmentation and Ionization 345

24.3.6 Influence of Collisions with the Residual Gas 345

24.3.7 Quasi-Static Interactions 346

24.3.8 Magnetic Interactions 346

24.3.9 Electric Interactions 347

24.3.10 Inertial Forces 347

24.3.11 Which-Way Information in Internal Clocks 348

24.4 Conclusion 349

25 Towards More Quantum Complete Neutron Experiments

Helmut Rauch 351

25.1 Introduction – Basic Relations 351

25.2 Classic Neutron Interference Experiments 355

25.2.1 Gravity Experiments 355

25.2.2 Neutron Fizeau Effect 356

25.2.3 4π Spinor Symmetry 356

25.2.4 Spin Superposition 357

25.2.5 Neutron Josephson Effect 359

25.2.6 Stochastic Versus Deterministic Beam-Path Detection . . . 360

25.3 Postselection Experiments 362

25.3.1 Postselection of Momentum States 362

25.3.2 Contrast Retrieval by Phase Echo 366

25.4 Phase-Space Coupling 366

25.5 Topological Effects 368

25.6 Discussion 370

Part VI Particles and Fields

**26 John Bell's Observations on the Chiral Anomaly
and Some Properties of Its Descendants**

Roman Jackiw 377

26.1 John Bell and the Chiral Anomaly 377

26.2 Descendants of the Anomaly 379

27 Fractional Charge

R. Rajaraman 383

27.1 Introduction 383

27.2 Fractional Charge in Field Theory 384

27.2.1 Vacuum Sector 385

27.2.2 Soliton Sector 387

27.3 Polyacetylene 389

27.4 Eigenvalue or Expectation Value? 391

27.4.1 Polyacetylene Re-Visited 396

27.5 Conclusion 397

28 Thermal Excitations of Accelerated Electrons

Jon Magne Leinaas 401

28.1 Electrons as a Thermometer 401

28.2 Linear Acceleration and the Unruh Effect 403

28.3 Stationary World Lines 406

28.4 Electrons in a Storage Ring 407

28.5 Concluding Remarks 411

29 Bell's Spaceships and Special Relativity

Franco Selleri 413

29.1 The Generalised Transformations 413

29.2 Michelson-Type Experiments 416

29.3 Jupiter's Satellites Occultations 417

29.4 Aberration 419

29.5 Radar Ranging of Planets 420

29.6 Proofs of Absolute Simultaneity 421

29.7 The Inertial Transformations 425

30 John Bell and the Ten Challenges of Subnuclear Physics

Antonino Zichichi 429

30.1 Introduction 429

30.2 The Remarkable Value of John Bell's Support to My Physics 431

30.3 The LAA Project in a Few Words 447

30.4 Facilities and the Basic Steps 448

30.5	The Ten Challenges	451
30.5.1	The Physics of Imaginary Masses (SSB)	451
30.5.2	Matter–Antimatter Symmetry	454
30.5.3	Supersymmetry	455
30.5.4	Non-perturbative QCD	457
30.5.5	Anomalies and Instantons	458
30.5.6	Flavour Mixing in the Quark Sector	462
30.5.7	Flavour Mixing in the Leptonic Sector	464
30.5.8	The Problem of the Missing Mass in the Universe	466
30.5.9	The Problem of Hierarchy	468
30.5.10	The Physics at the Planck Scale: The Gap and the Number of Expanded Dimensions	469
30.6	The ELN Project in a Few Words	471
30.7	Conclusions	473
	Subject Index	479
