Preface	xix
Acknowledgments	xxiii
Chapter 1 Introduction.....	1
I. Introduction	3
1. The Tools and Data of Mass Spectrometry.....	4
2. The Concept of Mass Spectrometry.....	4
II. History	9
III. Some Important Terminology Used In Mass Spectrometry.....	22
1. Introduction.....	22
2. Ions.....	22
3. Peaks	23
4. Resolution and Resolving Power.....	25
IV. Applications	28
1. Example 1-1: Interpretation of Fragmentation Patterns (Mass Spectra) to Distinguish Positional Isomers	29
2. Example 1-2: Drug Overdose: Use of GC/MS to Identify a Drug Metabolite	31
3. Example 1-3: Verification that the Proper Derivative of the Compound of Interest Has Been Prepared	32
4. Example 1-4: Use of a CI Mass Spectrum to Complement an EI Mass Spectrum	35
5. Example 1-5: Use of Exact Mass Measurements to Identify Analytes According to Elemental Composition.....	38
6. Example 1-6: Is This Protein Phosphorylated? If So, Where?	40
7. Example 1-7: Clinical Diagnostic Tests Based on Quantitation of Stable Isotopes by Mass Spectrometry in Lieu of Radioactivity	42
V. The Need for Chromatography	43
VI. Closing Remarks	44
VII. Monographs on Mass Spectrometry Published Before 1970	45
Chapter 2 The Mass Spectrometer	53
I. Introduction	55
II. Ion Guides.....	56
III. Types of m/z Analyzers.....	61
1. Time-of-Flight m/z Analyzers.....	62
A. Linear	64
1) Resolving Power of the Linear TOF Instrument.....	65
2) Time-Lag Focusing	66
3) Beam Deflection	67
B. Reflectron	69
C. Orthogonal Acceleration	74

D. Ion Detection in the TOF Analyzer	75
1) Time-Slice Detection	76
2) Time-Array Detection	77
3) TAD with Transient Recorders	79
4) TAD with an Integrating Transient Recorder	79
5) Hadamard Transform TOF-MS	80
2. Quadrupole Ion Traps	82
A. 3D Quadrupole Ion Trap	84
B. Linear Quadrupole Ion Trap (LIT)	97
C. Performance Trade-Offs in the Ion Trap	100
3. The Orbitrap	103
A. Historical Aspects	103
B. Operating Principles	103
1) Role of the C Trap in Success of the Orbitrap	106
2) Figures of Merit for the Orbitrap as an m/z Analyzer	107
4. Transmission Quadrupoles	108
A. QMF Equations of Motion	109
B. The Stability Diagram	110
C. Characteristics of Output	111
D. Spectral Skewing	113
E. Performance Limitations	115
5. Magnetic-Sector Instruments	115
A. Single-Focusing Instruments	116
1) Operating Principles	116
2) Magnetic Versus Scanning	117
3) Performance Limitations	118
B. Double-Focusing Instruments	118
6. FTICR-MS	122
A. Hardware Configuration	123
B. Operational Considerations	126
C. Representative Applications	127
7. Ion Mobility Spectrometry (IMS)	128
A. Operating Principles	128
B. FAIMS	129
C. Applications	130
IV. Calibration of the m/z Scale	131
1. Electron Ionization	132
2. Chemical Ionization	133
3. Electrospray Ionization and APCI Techniques	134
4. MALDI	135
V. Ion Detectors	136
1. General Considerations	136
2. Types of Detectors	137
A. Faraday Cup	138
B. Electron Multiplier	139
1) Discrete-Dynode Version	139
2) Continuous-Dynode Version	140
C. Negative-Ion Detection	142
D. Post-Acceleration Detection and Detection of High-Mass Ions	143
E. Channel Electron Multiplier Array (CEMA)	144

F. Electro-Optical Ion Detection	144
G. The Daly Detector	145
H. Cryogenic Detectors	146
I. Ion Detection in FTMS	147
VI. Vacuum Systems.....	147
1. Introduction.....	147
2. Definitions.....	148
3. Pressure Gauges	150
A. Thermal-Conductivity Gauges	150
B. Pirani Gauge	150
C. Thermocouple Gauges	151
4. Ionization Gauges.....	151
A. Hot-Cathode Gauge.....	151
B. Cold-Cathode Gauge	151
5. Types of Pumps	152
A. Mechanical Pumps (Low Vacuum)	152
1) Rotary Vane Pumps	153
2) Scroll Pumps	154
3) Roots Pumps.....	155
4) Diaphragm Pumps	156
B. High Vacuum	156
1) Turbomolecular Pumps	157
2) Oil Diffusion Pumps.....	160
3) Sputter-Ion Pumps (Nonregeneratable Getter Pumps).....	162
Chapter 3 Mass Spectrometry/Mass Spectrometry.....	173
I. Introduction	175
1. History and the Evolution of the Technique.....	175
2. Concept and Definitions	176
3. Nomenclature	177
II. Ion Dissociation.....	179
1. Metastable Ions	179
2. Collisionally Activated Dissociation	180
3. Electron Capture Dissociation	181
4. Electron-Transfer Dissociation	181
5. Illustrative Example of Qualitative Analysis by MS/MS	184
III. Instrumentation for MS/MS	184
1. <i>Tandem-in-Space</i> Mass Spectrometry (MS/MS).....	186
A. Triple-Quadrupole Mass Spectrometer	187
B. Q-TOF Hybrid Mass Spectrometer	188
C. TOF-TOF Mass Spectrometer.....	190
D. BEqQ Hybrid Mass Spectrometer.....	190
E. Double-Focusing Instrument.....	191
2. <i>Tandem-in-Time</i> Mass Spectrometry	192
IV. Specialized Techniques and Applications.....	196
1. In-Source CAD	196
2. CAD in Conjunction with Soft Ionization	197
A. Data-Dependent Acquisition	199

3. Selected Reaction Monitoring.....	199
A. Illustrative Example Showing that SRM Has a Higher Specificity than SIM in Spite of a Lower Signal Strength	199
B. An Example Comparing the Specificity of SRM and SIM in the Context of Analyzing a Biological Sample for a Drug Metabolite	201
4. Precursor-Ion Analysis	204
5. Neutral-Loss (Common Neutral-Loss) Analysis	205
6. Ion/Molecule Reactions	206
7. Hybrid Instrumentation for MS/MS and Ion Mobility Spectrometry (IMS)	206
V. Analyte Identification from MS/MS Data	208
1. Introduction.....	208
2. Identifying an Unknown Using a Product-Ion Mass Spectrum	209
3. Similarities between EI and Product-Ion Mass Spectra	214
4. Another Way of Using Substructure Identification.....	215
5. Searching of Product-Ion Spectra against Standardized Databases	218
VI. Concluding Remarks about MS/MS.....	220
 Chapter 4 Inlet Systems	 229
I. Introduction	231
II. Batch Inlets	232
1. Heated Reservoir Inlet.....	232
2. Direct Inlet Probe (DIP)	233
A. The Chromatoprobe.....	235
3. Direct Exposure Probe (Desorption Chemical Ionization, DCI).....	236
4. Pyrolysis	238
III. Continuous Inlets	239
1. Membrane Introduction MS (MIMS)	239
2. Supercritical Fluid Chromatography (SFC)	240
3. Electrophoretic Inlet.....	242
IV. Ionization Inlet Systems	244
1. Direct Analysis in Real Time (DART)	245
2. Desorption Electrospray Ionization (DESI)	247
3. Desorption Atmospheric Pressure Chemical Ionization (DAPCI).....	249
V. Speciality Interfaces.....	249
1. Selected Ion Flow Tube Mass Spectrometry (SIFTMS)	249
2. Fast Atom Bombardment (FAB) and Liquid Secondary Ion Mass Spectrometry (LSIMS)	250
3. Chemical Reaction Interface Mass Spectrometry (CRIMS)	252
4. Inductively Coupled Plasma Mass Spectrometry (ICPMS)	253
A. Hardware Configuration	254
B. Operational Considerations	254
C. Electrothermal Vaporization.....	255
D. Laser Ablation.....	255
E. Speciation	256
F. Summary.....	256
VI. Final Statement.....	257

Chapter 5	Strategies for Data Interpretation (Other than Fragmentation)	267
I.	Introduction	269
II.	Some Important Definitions	271
III.	Possible Information That Can Be Obtained from the Mass Spectrum	271
IV.	Elemental Composition of an Ion and the Ratios of Its Isotope Peaks	273
1.	Definition of Terms Related to the Matter of Mass Spectrometry	273
2.	Nitrogen Rule	275
3.	Elemental Composition of an Ion Based on the Ratio of Isotope Peak Intensities	276
A.	Isotope Peak Patterns Used to Determine the Elemental Composition of Ions	276
B.	Isotope Peak Patterns for Ions Containing Various Combinations of Br/Cl	279
C.	Constraint on the Number of Atoms Allowed for a Given Element	281
D.	Relationship of the Charge State of an Ion and the Spacing of the Corresponding Isotope Peaks	281
1)	Ions of High Mass-to-Charge Ratio	282
E.	Steps to Assigning an Elemental Composition Based on Isotope Peak Intensities	283
F.	Validating the Putative Elemental Composition of an Ion	284
G.	An Illustrative Example of the Use of Isotope Peak Ratios to Determine an Elemental Composition	285
H.	Potential Problems Arising from Adjacent Peaks	291
4.	Elemental Composition as a Function of an Accurate Determination of the m/z Value of a Mass Spectral Peak	293
A.	Appearance of Mass Spectra of High- m/z Value Ions	295
5.	Using EI Data to Identify Unknowns Detected During Analysis by LC/MS	297
6.	Does the Result Make Sense?	299
V.	Identifying the Mass of an Analyte	302
1.	Recognition of the Peak Representing the Molecular Ion in EI	304
A.	Reasonable Losses from the Molecular Ion in EI	305
2.	Recognition of the Protonated Molecule (MH^+) in Soft Ionization	305
A.	Probable Adducts Observed in the Mass Spectrum Produced by Soft Ionization	306
3.	Recognition of the Deprotonated Molecule ($[M - H]^-$) Peak in Soft Ionization	306
VI.	Recognition of Spurious Peaks in the Mass Spectrum	307
1.	Noise Spikes	307
2.	Peaks Corresponding to Contaminants in GC/MS and LC/MS	307
A.	The Phthalate Peak	307
B.	GC Column Bleed	308
C.	Cluster Ions	308
VII.	Obtaining Structural Information from the Mass Spectrum	308

Chapter 6	Electron Ionization	315
I.	Introduction	317
II.	Ionization Process	317
III.	Strategy for Data Interpretation	321
	1. Assumptions	321
	2. The Ionization Process	321
IV.	Types of Fragmentation Pathways	328
	1. Sigma-Bond Cleavage	330
	2. Homolytic or Radical-Site-Driven Cleavage	333
	3. Heterolytic or Charge-Site-Driven Cleavage	335
	4. Rearrangements	337
	A. Hydrogen-Shift Rearrangements	338
	B. Hydride-Shift Rearrangements	342
V.	Representative Fragmentations (Spectra) of Classes of Compounds	344
	1. Hydrocarbons	345
	A. Saturated Hydrocarbons	345
	1) Straight-Chain Hydrocarbons	345
	2) Branched Hydrocarbons	348
	3) Cyclic Hydrocarbons	351
	B. Unsaturated	353
	C. Aromatic	355
	2. Alkyl Halides	363
	3. Oxygen-Containing Compounds	368
	A. Aliphatic Alcohols	368
	B. Aliphatic Ethers	372
	C. Aromatic Alcohols	376
	D. Cyclic Ethers	381
	E. Ketones and Aldehydes	381
	F. Aliphatic Acids and Esters	392
	G. Aromatic Acids and Esters	402
	4. Nitrogen-Containing Compounds	405
	A. Aliphatic Amines	405
	B. Aromatic Compounds Containing Atoms of Nitrogen	414
	C. Heterocyclic Nitrogen-Containing Compounds	419
	D. Nitro Compounds	419
	E. Concluding Remarks on the Mass Spectra of Nitrogen-Containing Compounds	420
	5. Multiple Heteroatoms or Heteroatoms and a Double Bond	421
	6. Trimethylsilyl Derivative	422
	7. Determining the Location of Double Bonds	429
VI.	Library Searches and EI Mass Spectral Databases	433
	1. Databases	433
	2. Library Search Programs	435
	3. What To Do When the Spectrum of the Unknown is Not in the Database(s)	439
	4. Searching Multiple Databases	440
	5. Database Size and Quality	440
	6. Concluding Remarks on the NIST Mass Spectral Search Program	441
	7. Mass Spectral Database Update	442
VII.	Summary of Interpretation of EI Mass Spectra	442

Chapter 7	Chemical Ionization	449
I.	Introduction	451
II.	Description of the Chemical Ionization Source	454
III.	Production of Reagent Ions from Various Reagent Gases	455
IV.	Positive-Ion Formation Under CI	457
1.	Fundamentals	457
2.	Practical Consideration of Proton Affinity in CI	460
3.	Selective Ionization	461
4.	Fragmentation	461
V.	Negative-Ion Formation under CI	464
1.	True Negative Chemical Ionization	464
2.	Resonant Electron Capture Negative Ionization	465
VI.	Data Interpretation and Systematic Studies of CI	469
VII.	Ionization by Charge Exchange	470
1.	Mechanism of Ionization	470
2.	Fragmentation and Appearance of Mass Spectra	471
VIII.	Atmospheric Pressure Chemical Ionization	471
IX.	Desorption Chemical Ionization	472
X.	General Applications	474
XI.	Concluding Remarks	477
Chapter 8	Electrospray Ionization	485
I.	Introduction	487
II.	Operating Principles	487
III.	Appearance of ESI Mass Spectra and Data Interpretation	490
IV.	ESI with an m/z Analyzer of High Resolving Power	493
V.	Conventional ESI Source Interface	494
VI.	Nanoelectrospray and Microelectrospray Ionization	494
VII.	Desorption Electrospray Ionization (DESI)	496
VIII.	Effect of Composition and Flow Rate of an Analyte Solution	499
IX.	Special Applications	500
1.	Direct Analysis of Ions in Solution by ESI	500
2.	Cold-Spray Ionization	501
3.	Negative-Ion Detection	501
4.	Secondary Electrospray Ionization (SESI)	502
5.	Kinetic Measurements of Chemical Reactions	502
6.	ESI Generation of Ions for Ancillary Experiments	502
X.	General Applications of ESI	503
Chapter 9	MALDI	519
I.	Historical Perspective and Introduction	521
II.	Operating Principles	521
1.	The Matrix	521
2.	The Laser, m/z Analyzer, and Representative Mass Spectra	525
3.	The Ionization Process	529
4.	High-Pressure (HP) MALDI and Atmospheric Pressure (AP) MALDI	533

III. Sample Handling	535
1. Sample Preparation of the Conventional Plate	535
2. The Problem of Analyte Solubility	537
3. The Problem of Sample Purity	537
4. On-Probe Sample Purification and/or Modification	538
A. Polymer-Modified Surfaces	538
B. Affinity Surfaces	540
5. Direct Analysis from Gels	541
6. Hydrogen/Deuterium Exchange	542
IV. Special Instrumental Techniques	542
1. Post-Source Decay (PSD)	542
2. Ion Excitation	544
3. Delayed Extraction (DE)	545
4. Desorption Ionization On Silicon (DIOS)	546
5. Tissue Profiling or Imaging	547
V. Representative Applications	549
1. Proteins and Peptides	549
2. Microbes	549
3. Biomarkers	550
4. Synthetic Polymers	550
5. Small Molecules	551
6. Quantitation	552
7. Combined with Liquid Chromatography	553
Chapter 10 Gas Chromatography/Mass Spectrometry	571
I. Introduction	573
II. Introduction to GC	575
1. Basic Types of Injectors	582
2. Injection Considerations and Syringe Handling	583
3. Syringeless Modes of Sample Injection for Fast GC	585
III. Sample Handling	585
1. Proper Sample Container	585
2. Analyte Isolation and Purification	587
3. Derivative Formation	587
A. Silyl Derivatives	588
B. Esters of Carboxylic Acids	588
C. Oxime Derivatives	589
D. Acyl Derivatives	590
E. Derivatives for Characterizing Double Bonds	590
IV. Instrument Requirements for GC/MS	590
1. Operating Pressures	590
2. Typical Parameters for a Conventional GC-MS Interface	593
3. Supersonic Molecular Beam Interface for GC/MS	594
4. Open-Split Interface	596
5. Molecular Separators	597
A. Jet-Orifice Separator	597
B. Membrane Separator	598
6. Inertness of Materials in the Interface	599

V. Operational Considerations	601
1. Spectral Skewing.....	601
2. Background/Bleed	602
3. The Need for Rapid Acquisition of Mass Spectra	604
A. Performance Trade-Offs of Conventional Instruments for GC/MS	605
B. Time-Array Detection	605
4. Selected Ion Monitoring (SIM)	606
A. Definition and Nomenclature	606
B. Development of the Technique	607
C. Qualitative Example of SIM	607
D. Quantitative Example of SIM	609
E. Mechanics of Ion Monitoring	613
1) Adjustment of the Mass Scale.....	613
2) Mass Range	613
3) Magnetic Mass Spectrometer	613
4) Transmission Quadrupole Mass Spectrometer.....	614
5) Number of Ion Currents (Masses).....	614
F. Programmable SIM.....	614
G. SIM at High Resolving Power	615
VI. Sources of Error	616
1. Errors Relating to Equipment or Procedure	616
2. Errors Relating to Contamination	617
3. Sources of Interference.....	618
4. Dealing with Background in a Mass Spectrum.....	618
A. AMDIS (Automated Mass spectral Deconvolution and Identification System).....	622
B. Other Software Techniques	629
VII. Representative Applications of GC/MS.....	631
VIII. Special Techniques.....	631
1. Purge and Trap	631
2. Thermal Desorption.....	632
Chapter 11 Liquid Chromatography/Mass Spectrometry	639
I. Introduction	641
II. Historical Milestones in the Development of the Interface	642
1. Introduction.....	642
2. The Direct Inlet.....	642
3. The Moving-Belt Interface	644
4. The Thermospray Interface	644
5. Continuous-Flow FAB	646
III. Currently Viable Versions of the Interface.....	647
1. Atmospheric Pressure Ionization.....	647
A. Electrospray Ionization Interface.....	647
1) Optimization for Analyses by HPLC	648
2) Capillary Electrophoresis Interface.....	650
B. APCI Interface	650

C. APPI Interface.....	654
1) Operating Principles of APPI.....	654
2) Operating Mechanics for APPI.....	656
3) Signal Suppression	657
4) Applications of APPI.....	658
2. Particle Beam Interface.....	659
3. Electron Ionization and LC/MS.....	661
IV. Special Operation of LC under MS Conditions	661
1. Effects of Mobile-Phase Composition	661
A. Signal Suppression.....	662
B. Use of Internal Standards in the Face of Signal Suppression.....	663
C. Adjusting the Chromatography in the Face of Signal Suppression during LC/MS.....	663
D. Ion Pairing and Signal Suppression.....	663
E. Influence of the Type and the Nature of LC Buffer	665
F. Influence of Solvent Composition on the ESI Signal.....	665
G. Adduct Formation	667
H. Spectral Interference	668
I. System Compromise	668
2. Differences in Method Development for ESI vs APCI	672
V. Applications	674
1. Attention to High Throughput	676
Chapter 12 Analysis of Proteins and Other Biopolymers	689
I. Introduction	691
II. Proteins	691
1. Sequencing.....	693
A. Nomenclature and Fragmentation in Sequencing of Peptides	693
1) Nomenclature	693
2) Fragmentation	695
B. Strategy for Deducing Amino Acid Sequence via CAD of Peptides.....	701
1) An Illustrative Example.....	702
2) Possible Pitfalls in Interpretation	705
3) Search for Confirming Ions	706
4) Ladder Sequencing	707
2. Mass Mapping	709
A. Peptide Mass Fingerprinting	709
B. <i>De novo</i> Sequencing.....	710
C. Sequence Tagging.....	710
D. Sequest.....	710
E. Evaluation of Hits in Automated Searches	711
F. Data-Dependent Analysis by Mass Spectrometry	712
3. Post-Translational Modifications	712
A. Recognition of Sites of Protein Phosphorylation.....	714
1) An Illustrative Example.....	715
2) Selective Capture and Detection of Phosphopeptides	718
3) Chemical Modification of Phosphorylation Sites	719

B. Recognition of Sites of Sulfation	722
C. Recognition of Sites of Glycosylation	723
D. Acetylation of Lysine	724
E. Cysteine Status in Proteins	726
1) Are There Any Disulfide Bonds?	726
2) Which Cysteines Are Free?	727
3) What Is the Linkage of Cysteines in the Disulfide Bonds?	727
(A) Conventional Proteolytic Mass Mapping of Disulfides	727
(B) Cyanylation-Based Mass Mapping of Disulfides	730
F. Recognition of Ubiquinated Proteins	734
G. Other Types of Modifications	735
4. Quantitation in Proteomics	735
A. ICATs	735
1) Operating Principles	735
2) Illustrative Example of the ICAT Approach	737
3) Analogous to ICAT Methodologies	740
B. Alternative Stable Isotope-Based Methodologies	740
C. Related Methodologies	743
5. "Top-Down" Strategies of Analysis	744
A. Instrumentation and Fragmentation Requirements	744
B. Electron Capture Dissociation (ECD)	749
C. Electron-Transfer Dissociation (ETD)	752
D. Applications	753
6. Noncovalent Interactions	753
7. Folding and Unfolding	756
8. Applications	759
III. Oligonucleotides	760
1. Analytical Considerations	760
2. Sequencing	761
A. Nomenclature	761
B. Algorithm for Data Interpretation	763
3. Applications	764
IV. Carbohydrates	765
1. Analytical Considerations	765
2. Nomenclature	765
3. Diagnostic Fragmentation	766
4. Applications	769
Subject Index	803
