

Surface Evolution Equations

A Level Set Approach

Bearbeitet von
Yoshikazu Giga

1. Auflage 2006. Buch. xii, 264 S. Hardcover

ISBN 978 3 7643 2430 8

Format (B x L): 17 x 24,4 cm

[Weitere Fachgebiete > Mathematik > Mathematische Analysis >
Differentialrechnungen und -gleichungen](#)

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

Preface	xi
Introduction	1
1 Surface evolution equations	15
1.1 Representation of a hypersurface	15
1.2 Normal velocity	18
1.3 Curvatures	21
1.4 Expression of curvature tensors	26
1.5 Examples of surface evolution equations	33
1.5.1 General evolutions of isothermal interfaces	33
1.5.2 Evolution by principal curvatures	34
1.5.3 Other examples	35
1.5.4 Boundary conditions	35
1.6 Level set equations	36
1.6.1 Examples	36
1.6.2 General scaling invariance	40
1.6.3 Ellipticity	42
1.6.4 Geometric equations	46
1.6.5 Singularities in level set equations	49
1.7 Exact solutions	52
1.7.1 Mean curvature flow equation	52
1.7.2 Anisotropic version	54
1.7.3 Anisotropic mean curvature of the Wulff shape	58
1.7.4 Affine curvature flow equation	62
1.8 Notes and comments	63
2 Viscosity solutions	69
2.1 Definitions and main expected properties	69
2.1.1 Definition for arbitrary functions	70
2.1.2 Expected properties of solutions	73
2.1.3 Very singular equations	77

2.2	Stability results	82
2.2.1	Remarks on a class of test functions	83
2.2.2	Convergence of maximum points	85
2.2.3	Applications	87
2.3	Boundary value problems	92
2.4	Perron's method	98
2.4.1	Closedness under supremum	100
2.4.2	Maximal subsolution	101
2.4.3	Adaptation for very singular equations	103
2.4.4	Applicability	105
2.5	Notes and comments	105
3	Comparison principle	109
3.1	Typical statements	109
3.1.1	Bounded domains	110
3.1.2	General domains	112
3.1.3	Applicability	112
3.2	Alternate definition of viscosity solutions	113
3.2.1	Definition involving semijets	113
3.2.2	Solutions on semiclosed time intervals	119
3.3	General idea for the proof of comparison principles	123
3.3.1	A typical problem	123
3.3.2	Maximum principle for semicontinuous functions	126
3.4	Proof of comparison principles for parabolic equations	128
3.4.1	Proof for bounded domains	129
3.4.2	Proof for unbounded domains	134
3.5	Lipschitz preserving and convexity preserving properties	139
3.6	Spatially inhomogeneous equations	148
3.6.1	Inhomogeneity in first order perturbation	148
3.6.2	Inhomogeneity in higher order terms	150
3.7	Boundary value problems	155
3.8	Notes and comments	158
4	Classical level set method	163
4.1	Brief sketch of a level set method	163
4.2	Uniqueness of bounded evolutions	166
4.2.1	Invariance under change of dependent variables	166
4.2.2	Orientation-free surface evolution equations	171
4.2.3	Uniqueness	172
4.2.4	Unbounded evolutions	174
4.3	Existence by Perron's method	175
4.4	Existence by approximation	180
4.5	Various properties of evolutions	182
4.6	Convergence properties for level set equations	192

4.7	Instant extinction	198
4.8	Notes and comments	201
5	Set-theoretic approach	207
5.1	Set-theoretic solutions	207
5.1.1	Definition and its characterization	208
5.1.2	Characterization of solutions of level set equations	211
5.1.3	Characterization by distance functions	213
5.1.4	Comparison principle for sets	216
5.1.5	Convergence of sets and functions	219
5.2	Level set solutions	219
5.2.1	Nonuniqueness	219
5.2.2	Definition of level set solutions	221
5.2.3	Uniqueness of level set solutions	223
5.3	Barrier solutions	226
5.4	Consistency	231
5.4.1	Nested family of subsolutions	231
5.4.2	Applications	233
5.4.3	Relation among various solutions	234
5.5	Separation and comparison principle	236
5.6	Notes and comments	238
	Bibliography	243
	Notation Index	261
	Subject Index	263
