### **1 A Framework for Building a Knowledge-Based System for Curriculum Design in Engineering**

|                                                                     |    |
|---------------------------------------------------------------------|----|
| <i>Mario Neto Borges</i> .....                                      | 1  |
| 1.1 Introduction .....                                              | 1  |
| 1.2 Rational .....                                                  | 6  |
| 1.3 Aims .....                                                      | 6  |
| 1.4 The Framework .....                                             | 7  |
| 1.5 Alternative Approaches to Knowledge Engineering .....           | 7  |
| 1.6 Methodology .....                                               | 9  |
| 1.6.1 Domain Delineation .....                                      | 9  |
| 1.6.2 Subdomain Investigation .....                                 | 11 |
| 1.6.3 Verification, Validation and Acceptance .....                 | 12 |
| 1.7 Knowledge Acquisition in Curriculum Development .....           | 13 |
| 1.7.1 The Specification of the Domain .....                         | 13 |
| 1.7.2 Definition of the Inputs and Outputs for the Subdomains ..... | 14 |
| 1.7.3 Software Architecture .....                                   | 14 |
| 1.8 Conclusions .....                                               | 20 |
| References .....                                                    | 21 |

### **2 A Web-based Authoring Tool for Intelligent Tutors: Blending Assessment and Instructional Assistance**

|                                                                                                                                                                                                           |    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <i>Leena Razzaq, Mingyu Feng, Neil T. Heffernan, Kenneth R. Koedinger,<br/>Brian Junker, Goss Nuzzo-Jones, Michael A. Macasek, Kai P.<br/>Rasmussen, Terrence E. Turner, and Jason A. Walonoski</i> ..... | 23 |
| 2.1 Introduction .....                                                                                                                                                                                    | 23 |
| 2.2 The Extensible Tutor Architecture .....                                                                                                                                                               | 24 |
| 2.2.1 Curriculum Unit .....                                                                                                                                                                               | 25 |
| 2.2.2 Problem Unit .....                                                                                                                                                                                  | 25 |
| 2.2.3 Strategy Unit .....                                                                                                                                                                                 | 27 |
| 2.2.4 Logging Unit .....                                                                                                                                                                                  | 28 |
| 2.2.5 System Architecture .....                                                                                                                                                                           | 29 |

## XII Contents

|                                                                                                              |    |
|--------------------------------------------------------------------------------------------------------------|----|
| 2.2.6 Methods . . . . .                                                                                      | 29 |
| 2.3 The Assistment Builder . . . . .                                                                         | 31 |
| 2.3.1 Purpose of the Assistment Builder . . . . .                                                            | 31 |
| 2.3.2 Assistments . . . . .                                                                                  | 32 |
| 2.3.3 Web Deployment . . . . .                                                                               | 33 |
| 2.3.4 Features . . . . .                                                                                     | 33 |
| 2.3.5 Methods . . . . .                                                                                      | 35 |
| 2.3.6 Results and analysis . . . . .                                                                         | 36 |
| 2.3.7 Future Work . . . . .                                                                                  | 37 |
| 2.4 Content Development and Usage . . . . .                                                                  | 38 |
| 2.4.1 Content Development . . . . .                                                                          | 38 |
| 2.4.2 Database Reporting . . . . .                                                                           | 41 |
| 2.4.3 Analysis of data to determine whether the system reliably<br>predicts MCAS performance . . . . .       | 41 |
| 2.4.4 Analysis of data to determine whether the system effectively<br>teaches. . . . .                       | 44 |
| 2.4.5 Experiments . . . . .                                                                                  | 45 |
| 2.4.6 Survey of students' attitudes . . . . .                                                                | 47 |
| 2.5 Summary . . . . .                                                                                        | 47 |
| References . . . . .                                                                                         | 47 |
| <br><b>3 Alife in the Classrooms: an Integrative Learning Approach</b>                                       |    |
| <i>Jordi Vallverdú</i> . . . . .                                                                             | 51 |
| 3.1 An Integrative Model of Learning . . . . .                                                               | 51 |
| 3.2 An Educational Application of Cognitive Sciences . . . . .                                               | 55 |
| 3.3 Alife as an Unified Scientific Enterprise . . . . .                                                      | 58 |
| 3.4 L-Systems as Keytool for e-Science . . . . .                                                             | 60 |
| 3.4.1 Introducing L-systems . . . . .                                                                        | 60 |
| 3.4.2 A cheap and easy way to use L-systems . . . . .                                                        | 63 |
| 3.4.3 How to use LSE: easy programming . . . . .                                                             | 65 |
| 3.4.4 Easy results and advanced possibilities . . . . .                                                      | 66 |
| 3.4.5 What are the objectives of creating images similar<br>to the previous one? . . . . .                   | 67 |
| 3.4.6 Learning by doing . . . . .                                                                            | 69 |
| 3.5 Summary . . . . .                                                                                        | 71 |
| References . . . . .                                                                                         | 72 |
| <br><b>4 Pedagogic Strategies Based on the Student Cognitive<br/>Model Using the Constructivist Approach</b> |    |
| <i>Louise Jeanty de Seixas, Rosa Maria Vicari,<br/>and Lea da Cruz Fagundes</i> . . . . .                    | 77 |
| 4.1 Introduction . . . . .                                                                                   | 77 |
| 4.2 Theoretical basis . . . . .                                                                              | 79 |
| 4.2.1 Cognitive structures . . . . .                                                                         | 79 |
| 4.2.2 Structures equilibration . . . . .                                                                     | 80 |

|                                                                      |     |
|----------------------------------------------------------------------|-----|
| 4.2.3 Disturbances, regulations and compensations . . . . .          | 80  |
| 4.2.4 Possibility and necessity . . . . .                            | 81  |
| 4.2.5 Conducts, grasp of consciousness, action and concept . . . . . | 82  |
| 4.3 AMPLIA . . . . .                                                 | 84  |
| 4.3.1 Domain Agent . . . . .                                         | 85  |
| 4.3.2 Learner Agent . . . . .                                        | 86  |
| 4.4 Pedagogic Strategies . . . . .                                   | 88  |
| 4.4.1 Creating strategies and tactics . . . . .                      | 88  |
| 4.4.2 Tactics selection . . . . .                                    | 91  |
| 4.5 Tracking the use of strategies in AMPLIA . . . . .               | 95  |
| 4.6 AMPLIA as medical learning software . . . . .                    | 98  |
| 4.7 Summary . . . . .                                                | 100 |
| References . . . . .                                                 | 101 |

## 5 Tracing CSCL Processes

|                                                                                                |     |
|------------------------------------------------------------------------------------------------|-----|
| <i>Cesar A. Collazos, Manuel Ortega, Crescencio Bravo,<br/>and Miguel A. Redondo . . . . .</i> | 103 |
| 5.1 Introduction . . . . .                                                                     | 103 |
| 5.2 Related work . . . . .                                                                     | 105 |
| 5.3 Our model . . . . .                                                                        | 106 |
| 5.4 Our experience . . . . .                                                                   | 107 |
| 5.4.1 The tool . . . . .                                                                       | 108 |
| 5.5 Discussion . . . . .                                                                       | 111 |
| 5.6 Summary . . . . .                                                                          | 112 |
| References . . . . .                                                                           | 114 |

## 6 Formal Aspects of Pedagogical Negotiation in AMPLIA System

|                                                                               |     |
|-------------------------------------------------------------------------------|-----|
| <i>João Carlos Gluz, Cecilia Dias Flores, and Rosa Maria Vicari . . . . .</i> | 117 |
| 6.1 Introduction . . . . .                                                    | 118 |
| 6.2 Theoretical Basis . . . . .                                               | 119 |
| 6.3 The Object of Negotiation in AMPLIA . . . . .                             | 122 |
| 6.4 The Negotiation Processes . . . . .                                       | 123 |
| 6.5 The Role of AMPLIA's Agents in the Pedagogical Negotiation . . . . .      | 126 |
| 6.6 Formalization of PN Process . . . . .                                     | 127 |
