DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beack-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

Preface to the First Edition	v
Preface to the Second Edition	vii
Preface to the Third Edition	ix
1 Introduction	1
1.1 Linear Models and Regression Analysis	1
1.2 Plan of the Book	3
2 The Simple Linear Regression Model	7
2.1 The Linear Model	7
2.2 Least Squares Estimation	8
2.3 Direct Regression Method	10
2.4 Properties of the Direct Regression Estimators	12
2.5 Centered Model	14
2.6 No Intercept Term Model	15
2.7 Maximum Likelihood Estimation	15
2.8 Testing of Hypotheses and Confidence Interval Estimation	17
2.9 Analysis of Variance	20
2.10 Goodness of Fit of Regression	23
2.11 Reverse Regression Method	24
2.12 Orthogonal Regression Method	24
2.13 Reduced Major Axis Regression Method	27

2.14	Least Absolute Deviation Regression Method	29
2.15	Estimation of Parameters when X Is Stochastic	30
3	The Multiple Linear Regression Model and Its Extensions	33
3.1	The Linear Model	33
3.2	The Principle of Ordinary Least Squares (OLS)	35
3.3	Geometric Properties of OLS	36
3.4	Best Linear Unbiased Estimation	38
3.4.1	Basic Theorems	38
3.4.2	Linear Estimators	43
3.4.3	Mean Dispersion Error	44
3.5	Estimation (Prediction) of the Error Term ϵ and σ^2	45
3.6	Classical Regression under Normal Errors	46
3.6.1	The Maximum-Likelihood (ML) Principle	47
3.6.2	Maximum Likelihood Estimation in Classical Normal Regression	47
3.7	Consistency of Estimators	49
3.8	Testing Linear Hypotheses	51
3.9	Analysis of Variance	57
3.10	Goodness of Fit	59
3.11	Checking the Adequacy of Regression Analysis	61
3.11.1	Univariate Regression	61
3.11.2	Multiple Regression	61
3.11.3	A Complex Example	65
3.11.4	Graphical Presentation	69
3.12	Linear Regression with Stochastic Regressors	70
3.12.1	Regression and Multiple Correlation Coefficient	70
3.12.2	Heterogenous Linear Estimation without Normality	72
3.12.3	Heterogeneous Linear Estimation under Normality	73
3.13	The Canonical Form	76
3.14	Identification and Quantification of Multicollinearity	77
3.14.1	Principal Components Regression	77
3.14.2	Ridge Estimation	79
3.14.3	Shrinkage Estimates	83
3.14.4	Partial Least Squares	84
3.15	Tests of Parameter Constancy	87
3.15.1	The Chow Forecast Test	88
3.15.2	The Hansen Test	91
3.15.3	Tests with Recursive Estimation	92
3.15.4	Test for Structural Change	93
3.16	Total Least Squares	96
3.17	Minimax Estimation	98
3.17.1	Inequality Restrictions	98

3.17.2	The Minimax Principle	101
3.18	Censored Regression	105
3.18.1	Overview	105
3.18.2	LAD Estimators and Asymptotic Normality	107
3.18.3	Tests of Linear Hypotheses	108
3.19	Simultaneous Confidence Intervals	110
3.20	Confidence Interval for the Ratio of Two Linear Parametric Functions	112
3.21	Nonparametric Regression	112
3.21.1	Estimation of the Regression Function	114
3.22	Classification and Regression Trees (CART)	117
3.23	Boosting and Bagging	121
3.24	Projection Pursuit Regression	124
3.25	Neural Networks and Nonparametric Regression	126
3.26	Logistic Regression and Neural Networks	127
3.27	Functional Data Analysis (FDA)	127
3.28	Restricted Regression	130
3.28.1	Problem of Selection	130
3.28.2	Theory of Restricted Regression	130
3.28.3	Efficiency of Selection	132
3.28.4	Explicit Solution in Special Cases	133
3.29	LINEX Loss Function	135
3.30	Balanced Loss Function	137
3.31	Complements	138
3.31.1	Linear Models without Moments: Exercise	138
3.31.2	Nonlinear Improvement of OLSE for Nonnormal Disturbances	139
3.31.3	A Characterization of the Least Squares Estimator	139
3.31.4	A Characterization of the Least Squares Estimator: A Lemma	140
3.32	Exercises	140
4	The Generalized Linear Regression Model	143
4.1	Optimal Linear Estimation of β	144
4.1.1	R_1 -Optimal Estimators	145
4.1.2	R_2 -Optimal Estimators	149
4.1.3	R_3 -Optimal Estimators	150
4.2	The Aitken Estimator	151
4.3	Misspecification of the Dispersion Matrix	153
4.4	Heteroscedasticity and Autoregression	156
4.5	Mixed Effects Model: Unified Theory of Linear Estimation	164
4.5.1	Mixed Effects Model	164
4.5.2	A Basic Lemma	164
4.5.3	Estimation of $X\beta$ (the Fixed Effect)	166

4.5.4	Prediction of $U\xi$ (the Random Effect)	166
4.5.5	Estimation of ϵ	167
4.6	Linear Mixed Models with Normal Errors and Random Effects	168
4.6.1	Maximum Likelihood Estimation of Linear Mixed Models	171
4.6.2	Restricted Maximum Likelihood Estimation of Linear Mixed Models	174
4.6.3	Inference for Linear Mixed Models	178
4.7	Regression-Like Equations in Econometrics	183
4.7.1	Econometric Models	186
4.7.2	The Reduced Form	190
4.7.3	The Multivariate Regression Model	192
4.7.4	The Classical Multivariate Linear Regression Model	195
4.7.5	Stochastic Regression	196
4.7.6	Instrumental Variable Estimator	197
4.7.7	Seemingly Unrelated Regressions	198
4.7.8	Measurement Error Models	199
4.8	Simultaneous Parameter Estimation by Empirical Bayes Solutions	209
4.8.1	Overview	209
4.8.2	Estimation of Parameters from Different Linear Models	211
4.9	Supplements	215
4.10	Gauss-Markov, Aitken and Rao Least Squares Estimators	216
4.10.1	Gauss-Markov Least Squares	216
4.10.2	Aitken Least Squares	217
4.10.3	Rao Least Squares	218
4.11	Exercises	220
5	Exact and Stochastic Linear Restrictions	223
5.1	Use of Prior Information	223
5.2	The Restricted Least-Squares Estimator	225
5.3	Maximum Likelihood Estimation under Exact Restrictions	227
5.4	Stepwise Inclusion of Exact Linear Restrictions	228
5.5	Biased Linear Restrictions and MDE Comparison with the OLSE	233
5.6	MDE Matrix Comparisons of Two Biased Estimators	236
5.7	MDE Matrix Comparison of Two Linear Biased Estimators	242
5.8	MDE Comparison of Two (Biased) Restricted Estimators	243
5.9	Stein-Rule Estimators under Exact Restrictions	251
5.10	Stochastic Linear Restrictions	252
5.10.1	Mixed Estimator	252
5.10.2	Assumptions about the Dispersion Matrix	254

5.10.3	Biased Stochastic Restrictions	257
5.11	Stein-Rule Estimators under Stochastic Restrictions . . .	261
5.12	Weakened Linear Restrictions	262
5.12.1	Weakly (R, r) -Unbiasedness	262
5.12.2	Optimal Weakly (R, r) -Unbiased Estimators . . .	262
5.12.3	Feasible Estimators—Optimal Substitution of β in $\hat{\beta}_1(\beta, A)$	266
5.12.4	RLSE instead of the Mixed Estimator	268
5.13	Exercises	269
6	Prediction in the Generalized Regression Model	271
6.1	Introduction	271
6.2	Some Simple Linear Models	271
6.2.1	The Constant Mean Model	271
6.2.2	The Linear Trend Model	272
6.2.3	Polynomial Models	273
6.3	The Prediction Model	274
6.4	Optimal Heterogeneous Prediction	275
6.5	Optimal Homogeneous Prediction	277
6.6	MDE Matrix Comparisons between Optimal and Classical Predictors	280
6.6.1	Comparison of Classical and Optimal Prediction with Respect to the y_* Superiority . .	283
6.6.2	Comparison of Classical and Optimal Predictors with Respect to the $X_*\beta$ Superiority .	285
6.7	Prediction Regions	287
6.7.1	Concepts and Definitions	287
6.7.2	On q -Prediction Intervals	289
6.7.3	On q -Intervals in Regression Analysis	291
6.7.4	On (p, q) -Prediction Intervals	292
6.7.5	Linear Utility Functions	294
6.7.6	Normally Distributed Populations - Two-Sided Symmetric Intervals	296
6.7.7	Onesided Infinite Intervals	298
6.7.8	Utility and Length of Intervals	298
6.7.9	Utility and coverage	300
6.7.10	Maximal Utility and Optimal Tests	300
6.7.11	Prediction Ellipsoids Based on the GLSE	302
6.7.12	Comparing the Efficiency of Prediction Ellipsoids	305
6.8	Simultaneous Prediction of Actual and Average Values of y	306
6.8.1	Specification of Target Function	307
6.8.2	Exact Linear Restrictions	308
6.8.3	MDEP Using Ordinary Least Squares Estimator	309
6.8.4	MDEP Using Restricted Estimator	309
6.8.5	MDEP Matrix Comparison	310

6.8.6	Stein-Rule Predictor	310
6.8.7	Outside Sample Predictions	311
6.9	Kalman Filter	314
6.9.1	Dynamical and Observational Equations	314
6.9.2	Some Theorems	314
6.9.3	Kalman Model	317
6.10	Exercises	318
7	Sensitivity Analysis	321
7.1	Introduction	321
7.2	Prediction Matrix	321
7.3	Effect of Single Observation on Estimation of Parameters	327
7.3.1	Measures Based on Residuals	328
7.3.2	Algebraic Consequences of Omitting an Observation	329
7.3.3	Detection of Outliers	330
7.4	Diagnostic Plots for Testing the Model Assumptions . . .	334
7.5	Measures Based on the Confidence Ellipsoid	335
7.6	Partial Regression Plots	341
7.7	Regression Diagnostics for Removing an Observation with Graphics	343
7.8	Model Selection Criteria	350
7.8.1	Akaike's Information Criterion	351
7.8.2	Bayesian Information Criterion	353
7.8.3	Mallows C_p	353
7.8.4	Example	355
7.9	Exercises	356
8	Analysis of Incomplete Data Sets	357
8.1	Statistical Methods with Missing Data	358
8.1.1	Complete Case Analysis	358
8.1.2	Available Case Analysis	358
8.1.3	Filling in the Missing Values	359
8.1.4	Model-Based Procedures	359
8.2	Missing-Data Mechanisms	360
8.2.1	Missing Indicator Matrix	360
8.2.2	Missing Completely at Random	360
8.2.3	Missing at Random	360
8.2.4	Nonignorable Nonresponse	360
8.3	Missing Pattern	360
8.4	Missing Data in the Response	361
8.4.1	Least-Squares Analysis for Filled-up Data—Yates Procedure	362
8.4.2	Analysis of Covariance—Bartlett's Method . . .	363
8.5	Shrinkage Estimation by Yates Procedure	364

8.5.1	Shrinkage Estimators	364
8.5.2	Efficiency Properties	365
8.6	Missing Values in the X -Matrix	367
8.6.1	General Model	367
8.6.2	Missing Values and Loss in Efficiency	368
8.7	Methods for Incomplete X -Matrices	371
8.7.1	Complete Case Analysis	371
8.7.2	Available Case Analysis	371
8.7.3	Maximum-Likelihood Methods	372
8.8	Imputation Methods for Incomplete X -Matrices	373
8.8.1	Maximum-Likelihood Estimates of Missing Values	373
8.8.2	Zero-Order Regression	374
8.8.3	First-Order Regression	375
8.8.4	Multiple Imputation	377
8.8.5	Weighted Mixed Regression	378
8.8.6	The Two-Stage WMRE	382
8.9	Assumptions about the Missing Mechanism	384
8.10	Regression Diagnostics to Identify Non-MCAR Processes	384
8.10.1	Comparison of the Means	384
8.10.2	Comparing the Variance-Covariance Matrices	385
8.10.3	Diagnostic Measures from Sensitivity Analysis	385
8.10.4	Distribution of the Measures and Test Procedure	385
8.11	Treatment of Nonignorable Nonresponse	386
8.11.1	Joint Distribution of (X, Y) with Missing Values Only in Y	386
8.11.2	Conditional Distribution of Y Given X with Missing Values Only in Y	388
8.11.3	Conditional Distribution of Y Given X with Missing Values Only in X	389
8.11.4	Other Approaches	390
8.12	Further Literature	391
8.13	Exercises	391
9	Robust Regression	393
9.1	Overview	393
9.2	Least Absolute Deviation Estimators — Univariate Case	394
9.3	M-Estimates: Univariate Case	398
9.4	Asymptotic Distributions of LAD Estimators	401
9.4.1	Univariate Case	401
9.4.2	Multivariate Case	402
9.5	General M-Estimates	403
9.6	Tests of Significance	407

10 Models for Categorical Response Variables	411
10.1 Generalized Linear Models	411
10.1.1 Extension of the Regression Model	411
10.1.2 Structure of the Generalized Linear Model	413
10.1.3 Score Function and Information Matrix	416
10.1.4 Maximum-Likelihood Estimation	417
10.1.5 Testing of Hypotheses and Goodness of Fit	420
10.1.6 Overdispersion	421
10.1.7 Quasi Loglikelihood	423
10.2 Contingency Tables	425
10.2.1 Overview	425
10.2.2 Ways of Comparing Proportions	427
10.2.3 Sampling in Two-Way Contingency Tables	429
10.2.4 Likelihood Function and Maximum-Likelihood Estimates	430
10.2.5 Testing the Goodness of Fit	432
10.3 GLM for Binary Response	435
10.3.1 Logit Models and Logistic Regression	435
10.3.2 Testing the Model	437
10.3.3 Distribution Function as a Link Function	438
10.4 Logit Models for Categorical Data	439
10.5 Goodness of Fit—Likelihood-Ratio Test	440
10.6 Loglinear Models for Categorical Variables	441
10.6.1 Two-Way Contingency Tables	441
10.6.2 Three-Way Contingency Tables	444
10.7 The Special Case of Binary Response	448
10.8 Coding of Categorical Explanatory Variables	450
10.8.1 Dummy and Effect Coding	450
10.8.2 Coding of Response Models	453
10.8.3 Coding of Models for the Hazard Rate	455
10.9 Extensions to Dependent Binary Variables	457
10.9.1 Overview	458
10.9.2 Modeling Approaches for Correlated Response	460
10.9.3 Quasi-Likelihood Approach for Correlated Binary Response	460
10.9.4 The GEE Method by Liang and Zeger	462
10.9.5 Properties of the GEE Estimate $\hat{\beta}_G$	463
10.9.6 Efficiency of the GEE and IEE Methods	465
10.9.7 Choice of the Quasi-Correlation Matrix $R_t(\alpha)$	465
10.9.8 Bivariate Binary Correlated Response Variables	466
10.9.9 The GEE Method	467
10.9.10 The IEE Method	468
10.9.11 An Example from the Field of Dentistry	469
10.9.12 Full Likelihood Approach for Marginal Models	474

10.10 Exercises	486
A Matrix Algebra	489
A.1 Overview	489
A.2 Trace of a Matrix	491
A.3 Determinant of a Matrix	492
A.4 Inverse of a Matrix	494
A.5 Orthogonal Matrices	495
A.6 Rank of a Matrix	495
A.7 Range and Null Space	496
A.8 Eigenvalues and Eigenvectors	496
A.9 Decomposition of Matrices	498
A.10 Definite Matrices and Quadratic Forms	501
A.11 Idempotent Matrices	507
A.12 Generalized Inverse	508
A.13 Projectors	516
A.14 Functions of Normally Distributed Variables	517
A.15 Differentiation of Scalar Functions of Matrices	520
A.16 Miscellaneous Results, Stochastic Convergence	523
B Tables	527
C Software for Linear Regression Models	531
C.1 Software	531
C.2 Special-Purpose Software	536
C.3 Resources	537
References	539
Index	563
