

Mining the Earth's Heat: Hot Dry Rock Geothermal Energy

Hot Dry Rock Geothermal Energy

Bearbeitet von
Donald W. Brown, David V. Duchane, Grant Heiken, Vivi Thomas Hriscu

1. Auflage 2012. Buch. xviii, 658 S. Hardcover
ISBN 978 3 540 67316 3
Format (B x L): 15,5 x 23,5 cm
Gewicht: 1172 g

Weitere Fachgebiete > Technik > Energietechnik, Elektrotechnik > Geothermale

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

PART I

Hot Dry Rock Geothermal Energy: History and Potential of the Newest and Largest Renewable Energy Resource

Chapter 1

Serendipity—A Brief History of Events Leading to the Hot Dry Rock Geothermal Energy Program at Los Alamos 3

Developments at Los Alamos 4

Hot Dry Rock in Its Infancy..... 8

The First Experiments in Hydraulic Fracturing..... 12

Chapter 2

The Enormous Potential for Hot Dry Rock Geothermal Energy 17

The Magnitude of the HDR Resource 19

Properties of the Deep Crystalline Basement as They Relate to HDR Reservoirs 21

 The Permeability of the Rock Mass 21

 Sealed Joints in the Deep Basement: Potential HDR Reservoir Flow Paths 22

The Geological and Hydrological Setting of Fenton Hill: Influence of the Valles Caldera..... 23

A True Hot Dry Rock Reservoir is *Confined* 25

A True Hot Dry Rock Geothermal System is *Fully Engineered* 27

Development of an HDR System..... 28

 Selection of a Site..... 28

 Drilling of an Injection Borehole 29

 Initial Pressurization Testing..... 29

 Creation of the Reservoir 30

 Drilling of the Production Wells 31

 Flow Testing..... 31

Seismic Risks Associated with HDR Geothermal Energy..... 32

The Economics of HDR Geothermal Energy 33

Using an HDR Reservoir for Load-Following 35

The Challenges of HDR Technology 38

A Major Observation and a Practical Lesson..... 39

PART II

First Demonstration of the Hot Dry Rock Geothermal Energy Concept: Development of the Phase I Reservoir at Fenton Hill

Chapter 3

Phase I Drilling and Initial Attempts to Establish

Hydraulic Communication 43

Planning, Drilling, and Testing of the GT-2 Borehole 46

 The Drilling Plan..... 46

 Stage 1 Drilling 49

 Drilling in the Surface Volcanic Rocks 49

 Drilling Through the Paleozoic Sedimentary Formations and into the

 Granitic Rocks..... 49

 Drilling in the Precambrian Crystalline Complex..... 52

 Stage 1 Coring..... 60

 Stage 1 Hydrology Experiments 62

Stage 1 Fracturing (Pressure-Stimulation) Tests	64
Stage 2 Drilling	69
Stage 2 Pressure-Stimulation Tests	69
Another Revision to the Plan	78
Stage 3 Drilling	79
Physical Properties of the Rock Matrix (as Derived from GT-2 Cores)	86
<i>In Situ</i> Permeability (Inferred from Laboratory Measurements).....	86
Microcrack Porosity	87
Thermal Conductivity.....	88
Other Physical Properties	89
Stage 3 Hydrology Experiments	90
Stage 3 Pressure-Stimulation Tests	91
Planning, Drilling, and Testing of the EE-1 Borehole	95
The Drilling Plan.....	95
Stage 1 Drilling	97
Drilling in the Surface Volcanic Rocks and Sedimentary Formations	97
Cementing of the Intermediate Casing String	100
Drilling in the Precambrian Basement	103
Stage 1 Pressure-Stimulation Tests	105
Stage 2 Drilling to 9168 ft.....	108
Stage 2 Final Drilling: Attempt to Connect EE-1 with the Joint at the Bottom of GT-2... 110	
First Series of Seismic Ranging Experiments	112
Second Series of Seismic Ranging Experiments.....	112
Third Series of Seismic Ranging Experiments.....	114
EE-1 Inadvertently Turned Away from the GT-2 Target	115
Seismic Interrogation of the GT-2 Target Joint	117
Final Attempts to Stimulate the Deeper Part of EE-1	120
Completion of the EE-1 Borehole.....	122
Studies of the Deep Joints Stimulated from EE-1 and GT-2 and Attempts to Improve the Hydraulic Connection (November 1975–November 1976)	128
Temperature Logging to Detect Fluid Entry/Exit Points	132
Joint Mapping Experiments	132
Quartz-Leaching Experiments to Reduce Flow Impedance.....	138
The Awakening: Early 1977.....	140
Additional Ranging Experiments	142
Gyroscopic Borehole Surveys.....	142
Additional Tracer and Cement-Bond Surveys	144
Shear-Shadowing Experiments	145
Induced-Potential Survey of the EE-1 Joint.....	148
Summary: The Situation Leading up to Redrilling of GT-2	148
The GT-2 Principal Joint	148
The EE-1 Principal Joints.....	150
EE-1 to GT-2 Flow Impedance	150
Reflections on the Geometry of the Joint System	150
Chapter 4	
Phase I Reservoir Development—Redrilling and Flow Testing	151
Redrilling of the GT-2 Borehole	153
Sidetracking and Directional Drilling of GT-2A.....	153
Pressurization of the Joint Intersection	156

Sidetracking, Directional Drilling, and Flow Testing of GT-2B.....	158
Completion of GT-2B.....	166
A Conceptual Model of the Phase I Reservoir.....	168
The Phase I Surface Facility	170
Water Storage	170
Injection Pumps.....	170
Surface Flow Loop.....	170
On-site Water Well.....	172
Controls and Data Acquisition Trailer.....	172
Chemistry Trailer	172
Seismic Instrumentation and Recording	172
Flow Testing of the Phase I Reservoir, 1977–1978	172
Run Segment 1: September 1977.....	173
Run Segment 2: January–April 1978.....	174
Run Segment 3: September–October 1978.....	184
Run Segments 1–3: General Observations	190
EE-1: Re-cementing of the Casing and Reactivation of the Deep Joint (9650 ft).....	191
Re-cementing of the EE-1 Casing—January 1979	191
Experiments 203 and 195, Seismicity, and Inferred Reservoir Volume.....	193
State of Stress within the Phase I Reservoir	201
Flow Testing of the Enlarged Phase I Reservoir, 1979–1980	202
Run Segment 4: October–November 1979	202
Run Segment 4: Observations.....	203
Through-Flow Fluid Volume of the Reservoir	203
Reservoir Temperatures.....	204
Reservoir Flow Behavior.....	206
Reservoir Flow Impedance	208
Seismicity: What Does it Say About the Reservoir?.....	211
Run Segment 5: March–December 1980.....	214
Comparison of Reservoir Through-Flow Fluid Volumes: Run Segments 2–5.....	215
Temperature Conditions in the Reservoir at the Beginning of Run Segment 5.....	216
Hydraulic and Related Data	219
Modeling of the Heat-Transfer Surface.....	222
Heat-Transfer Volume of the Reservoir.....	224
Geothermometer Measurements.....	225
Geochemistry Results.....	228
Stress-Unlocking Experiment.....	230

PART III

Engineering the HDR System: Development and Testing of the Phase II Reservoir at Fenton Hill

Chapter 5

Planning and Drilling of the Phase II Boreholes.....	237
The Phase II Development Plan.....	238
Planning and Drilling of the EE-2 Borehole.....	241
Drilling in the Volcanic Rocks	242
Drilling in the Paleozoic Rocks.....	243
Drilling in the Precambrian Crystalline (Plutonic and Metamorphic) Complex	244
Vertical Drilling.....	244
Directional Drilling	251

Borehole-Reduction Drilling, Coring Runs, and Attempt to Repair the 13 3/8-in. Casing.....	253
Running and Cementing of the 9 5/8-in. Casing.....	256
Final Drilling.....	258
Reflections on the EE-2 Drilling Operation.....	260
Equipment and Materials: Performance in the EE-2 Borehole.....	262
Drilling Fluids.....	262
Volcanic and Paleozoic Sedimentary Rocks.....	263
Precambrian Crystalline (Plutonic and Metamorphic) Rocks.....	263
Bits Used in the Crystalline Basement Rocks.....	264
Directional Drilling Equipment.....	266
Motor-Driven Equipment.....	266
Rotary Angle-Building and Angle-Maintaining Assemblies.....	268
Directional Surveying Equipment.....	268
Drill String.....	268
Logging Instrumentation.....	269
Three Observations from the Drilling of the EE-2 Borehole.....	271
Attempts to Seal the Sandia Formation Loss Zone.....	271
Attempts to Repair the Intermediate Casing.....	272
Testing of a New Core Bit.....	272
Planning and Drilling of the EE-3 Borehole.....	272
Drilling Plan.....	273
Drilling Through the Volcanic and Sedimentary Rocks and into the Granitic Basement.....	275
Drilling in the Precambrian Crystalline (Plutonic and Metamorphic) Complex.....	276
Vertical Drilling.....	276
Directional Drilling.....	277
Sidetracking of the EE-3 Borehole.....	285
Orienting the Sidetracked EE-3 Borehole with Respect to EE-2.....	287
Drilling of the 8 3/4-in. Section of the EE-3 Borehole.....	288
The Final Position of EE-3 Relative to EE-2.....	292
Completion of the EE-3 Borehole.....	294
Pre-Casing Operations.....	294
Running of the 9 5/8-in. Production Casing.....	295
Stage Cementing.....	296
Equipment and Materials: Performance in the EE-3 Borehole.....	301
Rotary Drilling Assemblies Used in the Crystalline Basement.....	301
Downhole Motors.....	302
Drilling Fluids System.....	303
Drill Pipe and Drill Collars.....	304
Elastomer Seals.....	306
Corrosion Control Additives.....	307
Observations from the Drilling of the EE-3 Borehole.....	307
Sidetracking in Basement Rock.....	307
Drilling Through Severe Lost-Circulation Zones.....	308
Time Spent in Drilling-Related vs Remedial Operations.....	309
Phase II Drilling: Summary and Conclusions.....	309
Directional Drilling Program.....	309
Drilling Supervision.....	310
Drilling Fluids Program.....	311
The "Incomplete" Completion of EE-3.....	312

Chapter 6

Attempts to Create a Deeper Reservoir, Redrilling of EE-3, and Completion of the Phase II Reservoir.....	313
Hydraulic Fracturing Tests Near the Bottom of EE-2.....	315
Preliminary Operations	315
Fracturing Attempts with Lynes Inflatable Packers	315
Fracturing Attempts with a Cemented-in Scab Liner.....	317
Hydraulic Fracturing Tests Below the Casing Shoe in EE-2	327
Initial Testing: Expt. 2018	327
Experiment 2020: Larger Injection Below the EE-2 Casing Shoe.....	334
The Connection Conundrum	339
Hydraulic Fracturing in EE-3	341
Experiment 2025: High-Pressure Injection into EE-3	343
Another Drill Pipe Failure.....	346
Fiscal Year 1983—A Frustrating Year for the Project	349
Temporary Suspension of Operations	349
First "Sideshow" Experiment in EE-3—Expt. 2028	351
More Fishing in EE-3.....	352
Second "Sideshow" Experiment in EE-3—Expt. 2033.....	353
Measurements in EE-2: The Shut-in Behavior of the Expt. 2020 Reservoir	354
The Massive Hydraulic Fracturing Test: Expt. 2032	355
Preparations.....	357
Five-Million-Gallon Pond and Supporting Equipment.....	357
Slimline Downhole Instrumentation	358
Preparation of the EE-2 Site and Borehole	358
Installation of the Otis Casing Packer.....	359
Installation of the Frac String.....	362
Pre-Pump Test	362
Pumping Equipment	363
Pulsation-Induced Fatigue of High-Pressure Lines.....	365
Last-Minute Preparations	365
The MHF Test: The Largest Injection Ever	367
A Blow-out at the Frac Head.....	369
Still No Connection to EE-3.....	369
Pressure Spallation of Joint Surfaces from Rapid Venting.....	370
Collapse of the Casing.....	371
Multiple-Path Venting of the Reservoir.....	372
Analysis of Seismic Data	373
The Volumetric Nature of HDR Reservoirs	377
Fault-Plane Solutions	378
Intuition vs Geophysics: A Critical Reassessment of the MHF Test Seismic Analyses.....	379
Deficit in Seismic Moment.....	381
MHF Test "Post-Mortem"	381
The Condition of EE-2: Preliminary Investigations.....	382
The Condition of EE-2: Further Investigations (Expt. 2036).....	383
Project Assessment and a Return to EE-3	386
Further Repairs at EE-3.....	387
Experiment 2042	388
Attempting a Connection.....	388
Investigating the Seismic Characteristics of the Expt. 2042 Joint System	391

First Attempt to Repair the EE-2 Borehole (October 15–December 18, 1984).....	392
The Status of the EE-2 Borehole at the End of 1984: Summary	397
Redrilling and Pressure-Stimulation of EE-3	398
Sidetracking of EE-3 (EE-3A)	398
Reinflation of the Reservoir Through EE-2—Expt. 2052	400
First Lynes Packer Test in EE-3A—Expt. 2049	401
Continued Drilling Brings Signs of Hydraulic Communication with EE-2	402
Experiment 2057	403
More Signs of Hydraulic Communication with EE-2	404
The First Successful Connection: Expt. 2059 (May 1985)	404
Final Stage of Drilling in EE-3A	408
Experiment 2061	409
Experiment 2062	412
Experiment 2066—A Seismic Anomaly	414
Completion of the EE-3A Wellbore (May 1986)	419
The Completion of the Phase II Reservoir: A Summary	421

Chapter 7

Initial Flow Testing of the Phase II Reservoir, Redrilling of EE-2, and Static Reservoir Pressure Testing 423

The Initial Closed-Loop Flow Test	424
The Surface Facilities	427
Circulation Components	429
Data Acquisition and Control	429
Seismic Instrumentation	429
Wellbore Temperature Measuring Equipment	430
Operational Plan	430
Start-up Mode: Reinflating the Reservoir	431
Open-Loop Circulation	431
Closed-Loop Circulation	432
ICFT Results	432
Circulation Performance	433
Power Production	435
Seismic Observations	438
Hydraulic Characteristics of the Reservoir	440
Thermal Studies	443
Reservoir Through-Flow Fluid Volume (Based on Tracer Data)	447
Geochemistry of the Circulating Fluid	448
ICFT Summary	450
Well EE-2: Second Repair Attempt, Redrilling, and Testing (November 1986–June 1988)	451
Second Attempt to Repair Well EE-2	452
Sidetracking and Redrilling of Well EE-2	453
Preliminary Flow Testing (Expt. 2074)	457
Completion of the EE-2A Wellbore	458
Post-Completion Injection Testing in EE-2A (Expt. 2076)	462
Modifications to the EE-2 Wellbore: Summary	462
Extended Static Reservoir Pressure Test (Expt. 2077)	464
Water Loss Trends	465
The Fluid-Accessible Reservoir Volume	467
Fluid Partitioning Between Joints and Microcracks	469

Chapter 8**The Surface Plant for the Long-Term Flow Test473**

Design of the Facilities	473
High-Pressure Segment.....	478
Injection Wellhead (EE-3A).....	478
Injection Pumps.....	480
High-Pressure Piping	482
Production Segment.....	483
Low-Pressure Segment	485
Gas/Particle Separator.....	485
Heat Exchanger	485
Makeup-Water Pumps.....	486
Low-Pressure Piping	486
Automated Control and Monitoring System.....	487
Ancillary Facilities.....	489
On-site Water Well.....	490
Water Storage Ponds	490
Buildings	490
Operations Building	490
Data Acquisition Trailer	491
Pump House	491
Chemistry Trailers.....	491
Seismic Monitoring Network.....	491
Miscellaneous Equipment and Structures	492
Environmental and Safety Controls.....	492

Chapter 9**Long-Term Flow Testing of the Phase II Reservoir493**

Development of the Operating Plan.....	493
Preliminary Flow Tests	496
Performance of the Surface Facilities During the Pre-LTFT Tests	499
The Long-Term Flow Test: Operations (1992–1995).....	499
First Steady-State Production Segment: April–July 1992.....	500
Interim Flow Testing: August 1992–February 1993	501
Second Steady-State Production Segment: February–April 1993	504
The First Experiment with Cyclic Operation: "Surging" the Production Flow	505
The First Load-Following Experiment	507
Extended Period of Minimal Operations: May 1993–May 1995.....	512
Third Steady-State Production Segment (Reservoir Verification Flow Test): May–July 1995.....	515
The Second Surging Experiment	517
The Second Load-Following Experiment	518
A Disastrous Annular Breakthrough at EE-3A.....	518
Tracer Studies.....	519
The Long-Term Flow Test: Results.....	521
Performance of the Surface Plant.....	521
Steady-State Production.....	522
Production Well Backpressure Experiments	523
Load-Following Revisited.....	524

Reservoir Engineering Studies.....	525
Water Loss	525
Impedance Distribution Across the Reservoir.....	528
Reservoir Joint Opening/Closing Pressures	528
The Dominance of the Joints in Controlling HDR Reservoir Behavior	530
Temperature Data: Production Well	530
Temperature Logging: Injection Well	534
Postulated Reservoir Segmentation and Connections to the Phase I Reservoir.....	535
Tracer and Geochemical Studies.....	536
Reservoir Fluid Pathways.....	536
Tracer Data as an Indicator of Reservoir Temperature Trends.....	540
Geochemical Analyses and the Fresh-Water Flush	541
Seismicity During the LTFT.....	549
Reservoir Modeling Related to the LTFT	550
Early Models	551
The GEOCRACK Model	552

PART IV

Future Outlook for Hot Dry Rock

Chapter 10

The Future of Hot Dry Rock Geothermal Energy..... 561

Enhancing Productivity.....	561
Extending the Lifetime of the System	563
Establishing the Universality of Hot Dry Rock	564
Addressing the Remaining Issues	565
Future Innovations in HDR Technology.....	566
Advanced Drilling.....	566
Load-Following and Pumped Storage.....	566
Treating Wastewater.....	567
New Circulation Fluids and Circulation Conditions	568
New Approaches to the Detection and Location of HDR-Associated Microseismic Events.....	568
Summary	569

Appendix 571

Glossary 585

Bibliography..... 597
