

Organic Photovoltaics

Concepts and Realization

Bearbeitet von
Christoph Joseph Brabec, Vladimir Dyakonov, Jürgen Parisi, Niyazi Serdar Sariciftci

1. Auflage 2003. Buch. xii, 300 S. Hardcover
ISBN 978 3 540 00405 9
Format (B x L): 15,5 x 23,5 cm
Gewicht: 1370 g

[Weitere Fachgebiete > Technik > Energietechnik, Elektrotechnik > Solarenergie, Photovoltaik](#)

schnell und portofrei erhältlich bei

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

1 Photoinduced Charge Transfer in Bulk Heterojunction Composites

Christoph J. Brabec, Vladimir Dyakonov	1
1.1 Conjugated Polymer–Fullerene Blend: A Highly Efficient System for Photoinduced Charge Generation	2
1.2 Molecular Semiconductor Picture of Conjugated Polymers	4
1.2.1 Molecular Structure	4
1.2.2 Optical and Electronic Properties	6
1.2.3 Characterisation of Excited States	7
1.2.4 Photoinduced Electron Transfer in Pure Conjugated Polymers and Molecules	10
1.2.5 Photoinduced Electron Transfer in Donor–Acceptor Systems ..	15
1.3 Detection of Charges in Conjugated Polymers	16
1.3.1 Pump–Probe Spectroscopy	16
1.3.2 Application of Pump–Probe Spectroscopy in the ms Range to Conjugated Polymer/Fullerene Blends	19
1.4 Kinetics of Photoinduced Charge Generation in Conjugated Polymer/Fullerene Blends	21
1.5 Light-Induced Electron-Spin Resonance Detection of the Charge Transfer Process	26
1.6 Oligo-Phenylene Vinylene: A Model System for Donor–Acceptor Interactions	29
1.7 Conclusion	51
References	51

2 Optical and Spectroscopic Properties of Conjugated Polymers

Davide Comoretto, Guglielmo Lanzani	57
2.1 Material and Optical Properties	58
2.1.1 Optical Constants and Electronic Structure	61
2.1.2 Determination of $\tilde{n}$ by Spectroscopic Methods	62
2.1.3 Anisotropy	65
2.1.4 Examples	67

2.2 Spectroscopic Properties of Excited States	71
2.2.1 Basic Notions of Pump–Probe Spectroscopy	72
2.2.2 Interpretation of Pump–Probe Experiments	73
2.2.3 Isolated Molecules	75
2.2.4 Condensed Phase	77
2.3 Conclusion	80
2.4 Appendix: Derivation of (2.17)	80
2.5 Appendix: Overview of Decay Kinetics	82
References	84
 3 Transport Properties of Conjugated Polymers	
Reghu Menon	91
3.1 Disorder and Localization	92
3.2 Conduction in Conjugated Systems	95
3.3 Metal–Insulator Transition	99
3.4 Hopping Transport	105
3.5 Magnetoresistance	108
3.6 Thermopower	113
3.7 Conclusion	115
References	116
 4 Quantum Solar Energy Conversion and Application to Organic Solar Cells	
Gottfried H. Bauer, Peter Würfel	118
4.1 Solar Radiation	118
4.2 Solar Cells and General Quantum Converters	120
4.2.1 Two-Level Systems	121
4.2.2 Fermi Distribution	122
4.2.3 Quasi-Fermi Distribution	122
4.2.4 Transition Rates and Optical Properties	123
4.2.5 Current–Voltage Characteristic	125
4.3 Semiconductor Solar Cells as Two-Band Systems	127
4.3.1 Fermi Distribution	128
4.3.2 Doping	129
4.3.3 Quasi-Fermi Distributions	130
4.3.4 Interaction of Light with Matter	131
4.3.5 Generation of Electron–Hole Pairs	135
4.3.6 Recombination	136
4.4 Radiative Limit for Solar Cell Efficiencies	138
4.4.1 Current–Voltage Characteristic	139
4.5 Charge Separation in Solar Cells	141
4.5.1 Charge Transport	143
4.5.2 Transport Equations for Semiconductor Solar Cells	147
4.5.3 Charge Transport in Low Mobility Materials	148

4.5.4 Carrier Mobilities in Organic Semiconductors.....	150
4.5.5 Equivalent Circuits for Solar Cells	151
4.6 Conclusions for Solar Cell Requirements.....	153
4.6.1 Special Geometrical Design	153
4.6.2 Particular Optical Design/Multispectral Conversion	155
References	156
 5 Semiconductor Aspects	
of Organic Bulk Heterojunction Solar Cells	
Christoph J. Brabec	159
5.1 Device Architectures	160
5.1.1 Single-Layer Diodes	160
5.1.2 Heterojunction Diodes.....	162
5.1.3 Bulk Heterojunction Solar Cells	163
5.2 Device Aspects and Transport Properties.....	169
5.2.1 Transport Properties of Diodes	169
5.2.2 Metal/Conjugated Polymer Contacts	177
5.2.3 Simulation and Modelling	183
5.3 Performance Analysis of Bulk Heterojunction Solar Cells	185
5.3.1 Precise Calibration of Solar Cells	186
5.3.2 Production: Device Geometry	188
5.3.3 Short-Circuit Current	190
5.3.4 Open-Circuit Voltage V_{oc}	205
5.3.5 Fill Factor FF	214
5.3.6 Spectral Response	221
5.3.7 Temperature Behavior of Bulk Heterojunction Solar Cells	229
5.3.8 Stability of Polymeric Semiconductors and Devices:	
A Molecular View	236
5.3.9 Processing of Polymeric Semiconductors:	
Blending with Conventional Polymers	240
5.4 Conclusion	242
References	243
 6 Organic Photodiodes: From Diodes to Blends	
Olle Inganäs, Lucimara Stolz Roman	249
6.1 Thin Film Organic Photodiodes	250
6.2 Optical Mode Structure in Thin Film Organic Structures.	
Optimization of Bilayer Geometries	251
6.3 Internal and External Quantum Efficiencies	
of Organic Photodiodes	263
6.4 Electrical Transport in Photodiodes	264
6.5 Nanostructure in Polymer/Molecule and Polymer/Polymer Blends .	265
6.6 Conclusion	270
References	271

7 Dye-Sensitized Solar Cells	
Jan Kroon, Andreas Hinsch	273
7.1 Operating Principles and Cell Structure of the nc-DSC	275
7.2 Manufacture of a Standard Glass/Glass nc-DSC	277
7.3 Module Designs	278
7.3.1 Series Connection of Glass/Glass Devices:	
Z- and W-Type Interconnection	279
7.3.2 Series Connection: Three-Layer or Monolithic Module	280
7.4 Sealing Aspects	280
7.5 Technological Development and the State of the Art	281
7.6 Large Scale Batch Processing of Mini-Modules	283
7.7 Long Term Stability	285
7.7.1 Stability Tests on Indoor Dye PV Modules	285
7.7.2 Long Term Stability Tests on High Power nc-DSC	286
7.8 Outlook	288
References	289
Index	291
