

Elementary Particles

Bearbeitet von

Guido Altarelli, Martin Grünewald, Kunio Inoue, Takaaki Kajita, Konrad Kleinknecht, Takashi Kobayashi,
Masatoshi Koshihara, Masayuki Nakahata, Tsuyoshi Nakaya, Koichiro Nishikawa, Ken Peach, Eliezer
Rabinovici, Dominik J. Schwarz, Reinhard Stock, Atsuto Suzuki, Hartmut Wittig, H. Schopper

1. Auflage 2008. Buch. xv, 597 S. Hardcover

ISBN 978 3 540 74202 9

Format (B x L): 21 x 27,9 cm

[Weitere Fachgebiete > Philosophie, Wissenschaftstheorie, Informationswissenschaft > Wissenschaften: Allgemeines > Nachschlagewerke, Wörterbücher, Zeitschriften, Bibliographien, Verzeichnisse](#)

schnell und portofrei erhältlich bei

The logo for beck-shop.de features the text 'beck-shop.de' in a bold, red, sans-serif font. Above the 'i' in 'shop' are three red dots of increasing size. Below the main text, 'DIE FACHBUCHHANDLUNG' is written in a smaller, red, all-caps sans-serif font.

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents of LB I/21A

1	Introduction (H. SCHOPPER)	1-1
2	Gauge Theories and the Standard Model (G. ALTARELLI)	2-1
2.1	Introduction	2-1
2.2	Overview of the Standard Model	2-2
2.3	The Formalism of Gauge Theories	2-5
2.4	Application to QCD	2-8
2.5	Quantization of a Gauge Theory	2-8
2.6	Spontaneous Symmetry Breaking in Gauge Theories	2-10
2.7	Quantization of Spontaneously Broken Gauge Theories: R_ξ Gauges	2-14
2.8	References for 2	2-16
3	The Standard Model of Electroweak Interactions (G. ALTARELLI)	3-1
3.1	Introduction	3-1
3.2	The Gauge Sector	3-1
3.3	Couplings of Gauge Bosons to Fermions	3-2
3.4	Gauge Boson Self-interactions	3-6
3.5	The Higgs Sector	3-7
3.6	The CKM Matrix	3-10
3.7	Neutrino Masses	3-14
3.8	Renormalization of the Electroweak Theory	3-15
3.9	QED Tests: Lepton Anomalous Magnetic Moments	3-17
3.10	Large Radiative Corrections to Electroweak Processes	3-19
3.11	Electroweak Precision Tests in the SM and Beyond	3-20
3.12	Results of the SM Analysis of Precision Tests	3-23
3.13	Phenomenology of the SM Higgs	3-26
3.13.1	Theoretical Bounds on the SM Higgs Mass	3-27
3.13.2	SM Higgs Decays	3-28
3.14	Limitations of the Standard Model	3-31
3.15	Acknowledgements	3-32
3.16	References	3-32
4	QCD: The Theory of Strong Interactions (G. ALTARELLI)	4-1
4.1	Introduction	4-1
4.2	Massless QCD and Scale Invariance	4-5
4.3	The Renormalisation Group and Asymptotic Freedom	4-8
4.4	More on the Running Coupling	4-14
4.5	Application to Hard Processes	4-16
4.5.1	$R_{e^+e^-}$ and Related Processes	4-16
4.5.2	The Final State in e^+e^- Annihilation	4-18
4.5.3	Deep Inelastic Scattering	4-19
4.5.3.1	Resummation for Deep Inelastic Structure Functions	4-25

4.5.3.2	Polarized Deep Inelastic Scattering	4-27
4.5.4	Factorisation and the QCD Improved Parton Model	4-28
4.6	Measurements of α_s	4-33
4.6.1	α_s from e^+e^- colliders	4-33
4.6.2	α_s from Deep Inelastic Scattering	4-34
4.6.3	Summary on α_s	4-35
4.7	Conclusion	4-36
4.8	Acknowledgements	4-37
4.9	References for 4	4-37
5	QCD on the Lattice (H. WITTIG)	5-1
5.1	Introduction and outline	5-1
5.1.1	Historical perspective	5-1
5.1.2	Outline	5-2
5.2	The lattice approach to QCD	5-3
5.2.1	Euclidean quantization	5-3
5.2.2	Lattice actions for QCD	5-5
5.2.3	Functional integral and observables	5-13
5.2.4	Continuum limit, scale setting and renormalization	5-16
5.2.5	Limitations and systematic effects	5-20
5.2.6	Simulations with dynamical quarks	5-22
5.3	Hadron spectroscopy	5-25
5.3.1	Light hadron spectrum	5-25
5.3.2	Glueballs	5-27
5.4	Confinement and string breaking	5-30
5.5	Fundamental parameters of QCD	5-33
5.5.1	Non-perturbative renormalization	5-35
5.5.2	Finite volume scheme: the Schrödinger functional	5-37
5.5.3	Regularization-independent momentum subtraction scheme	5-40
5.5.4	Mean-field improved perturbation theory	5-41
5.5.5	The running coupling from the lattice	5-42
5.5.6	Light quark masses	5-46
5.6	Spontaneous chiral symmetry breaking	5-49
5.6.1	Chiral Perturbation Theory	5-50
5.6.2	Lattice calculations of the quark condensate	5-52
5.7	Hadronic weak matrix elements	5-58
5.7.1	Weak matrix elements in the kaon sector	5-59
5.7.2	Weak matrix elements in the heavy quark sector	5-63
5.8	Concluding remarks	5-71
5.9	Acknowledgements	5-71
5.10	References for 5	5-72
6	Experimental Precision Tests for the Electroweak Standard Model (M.W. GRÜNEWALD)	6-1
6.1	Introduction	6-1
6.2	Fermion-Pair Production and the Z Resonance	6-2
6.2.1	Introduction	6-2
6.2.2	Z Lineshape and Forward-Backward Asymmetries	6-4
6.2.3	Polarised Asymmetries at SLC	6-8
6.2.3.1	Left-Right Asymmetry	6-8
6.2.3.2	Left-Right Forward-Backward Asymmetry	6-9
6.2.3.3	Summary	6-9

6.2.4	Tau Polarisation at LEP	6-10
6.2.5	Heavy Quark Flavours b and c	6-14
6.2.5.1	Introduction	6-14
6.2.5.2	Tagging Methods	6-15
6.2.5.3	Partial Width Measurements	6-15
6.2.5.4	Asymmetry Measurements	6-16
6.2.5.5	Corrections and Systematic Uncertainties	6-18
6.2.5.6	Combined Results	6-21
6.2.6	Inclusive Hadronic Charge Asymmetry	6-26
6.2.7	Z Boson Properties and Effective Couplings	6-27
6.2.7.1	Z-Boson Decay Widths and Number of Neutrinos	6-27
6.2.7.2	The Asymmetry Parameters	6-27
6.2.7.3	Effective Couplings of the Neutral Weak Current	6-28
6.2.7.4	The Effective Electroweak Mixing Angle	6-30
6.3	The W Boson	6-33
6.3.1	W Bosons at Hadron Colliders	6-33
6.3.1.1	Production of W Bosons	6-33
6.3.1.2	Determination of W-Boson Mass and Width	6-33
6.3.2	W Bosons at LEP-II	6-36
6.3.2.1	Production of W Bosons	6-36
6.3.2.2	Determination of W-Boson Mass and Width	6-39
6.4	The Top Quark	6-42
6.4.1	Top Quark Production	6-42
6.4.2	Mass of the Top Quark	6-44
6.5	Low-Energy Measurements	6-46
6.5.1	Parity Violation in Atoms	6-46
6.5.2	Parity Violation in Möller Scattering	6-47
6.5.3	Neutrino-Nucleon Scattering	6-47
6.5.4	Anomalous Magnetic Moment of the Muon	6-49
6.6	Constraints on the Standard Model	6-51
6.6.1	Introduction	6-51
6.6.2	Z-Pole Results	6-51
6.6.3	The Mass of the Top Quark and of the W Boson	6-52
6.6.4	The Mass of the Higgs Boson	6-53
6.7	Summary and Conclusion	6-57
6.7.1	Prospects for the Future	6-58
6.8	Acknowledgements	6-58
6.9	References for 6	6-58
7	Relativistic Nucleus-Nucleus Collisions and the QCD Matter Phase Diagram (R. STOCK)	7-1
7.1	Introduction	7-1
7.1.1	Overview	7-1
7.1.2	History	7-5
7.2	Bulk hadron production in A+A collisions	7-7
7.2.1	Particle multiplicity and transverse energy density	7-8
7.2.2	Rapidity distributions	7-11
7.2.3	Dependence on system size	7-15
7.2.4	Gluon saturation in A+A collisions	7-18
7.2.5	Transverse phase space: equilibrium and the QGP state	7-23
7.2.6	Bulk hadron transverse spectra and radial expansion flow	7-28
7.3	Hadronization and hadronic freeze-out in A+A collisions	7-33
7.3.1	Hadronic freeze-out from expansion flow	7-35

7.3.2	Grand canonical strangeness enhancement	7-37
7.3.3	Origin of hadro-chemical equilibrium	7-42
7.3.4	Hadronization vs. rapidity and $\sqrt{s}$	7-44
7.4	Elliptic flow	7-47
7.5	In-medium attenuation of high p_T hadron and jet production	7-52
7.5.1	High p_T inclusive hadron production quenching	7-52
7.5.2	Energy loss in a QCD medium	7-56
7.5.3	Di-jet production and attenuation in A+A collisions	7-61
7.6	Vector meson and direct photon production: penetrating probes	7-66
7.6.1	Charmonium suppression	7-67
7.6.2	Direct photons	7-70
7.6.3	Low mass dilepton spectra: vector mesons in-medium	7-72
7.7	Fluctuation and correlation signals	7-75
7.7.1	Elliptic flow fluctuation	7-75
7.7.2	Critical point: fluctuations from diverging susceptibilities	7-77
7.7.3	Critical fluctuation of the sigma-field, and related pionic observables	7-79
7.7.4	Bose-Einstein-correlation	7-81
7.8	Summary	7-86
7.9	References for 7	7-89
8	Beyond the Standard Model (E. RABINOVICI)	8-1
8.1	Introduction	8-1
8.2	Super Symmetry	8-4
8.2.1	Elementary particles in SUSY models – algebraic structure	8-4
8.2.2	Supersymmetric Lagrangians	8-6
8.2.2.1	Superspace, chiral fields and Lagrangians for spin zero and one-half particles	8-6
8.2.2.2	Global symmetries	8-8
8.2.2.3	Lagrangians for SUSY gauge theories	8-10
8.2.3	Supersymmetrical particle spectrum in nature?	8-12
8.2.4	Spontaneous SUSY breaking – perturbative analysis	8-12
8.2.4.1	F -terms	8-12
8.2.4.2	SUSY breaking in theories with scalars and spin one half particles by F terms	8-13
8.2.4.3	SUSY breaking in supersymmetric gauge theories	8-14
8.2.5	Dynamics of SUSY gauge theories and SUSY breaking	8-15
8.2.5.1	Phases of gauge theories	8-16
8.2.5.2	SUSY QCD – the setup	8-17
8.2.5.3	The moduli space	8-18
8.2.5.4	Quantum moduli spaces/Dynamical SUSY breaking	8-20
8.2.5.5	Infra-red duality	8-24
8.2.5.6	More general matter composition of SUSY gauge theories	8-25
8.2.6	Dynamics of SUSY gauge theories with $N > 1$ SUSY	8-27
8.2.6.1	$N = 4$ supersymmetry	8-27
8.2.7	Gauging supersymmetry	8-28
8.2.8	The hierarchy problem	8-28
8.2.9	Effective theories	8-29
8.2.10	MSSM Lagrangian	8-30
8.3	Unification	8-33
8.3.1	Gauge group unification	8-33
8.3.2	Extra dimensions and unification	8-33
8.4	String Theory	8-36
8.4.1	No NOH principle	8-36
8.4.2	Why change a winning team: Extended constituents are called upon to replace point-like ones	8-37

8.4.3	New questions	8-38
8.4.4	The one and only?	8-39
8.4.5	Successes: Black holes, holography and all that	8-42
8.4.6	Magic	8-43
8.4.7	Human effort and closing remarks	8-45
8.5	References for 8	8-45
9	Particle Cosmology (D.J. SCHWARZ)	9-1
9.1	Introduction	9-1
9.2	The minimal cosmological model	9-1

12.4.1.2	Hadronic Physics	12-13
12.4.2	High Intensity Neutrino Beams	12-13
12.4.2.1	Experiments Running or Under Construction	12-14
12.4.2.2	“BETA Beams”	12-15
12.4.2.3	The Neutrino Factory	12-16
12.4.3	High Intensity Muon Sources	12-17
12.5	Non-Accelerator Experiments	12-18
12.6	Particle Astrophysics	12-18
12.7	Summary	12-19
12.8	References	12-19
