
List of Contents

Molecular Mimicry, Microbial Infection, and Autoimmune Disease: Evolution of the Concept	1
<i>M. B. A. Oldstone</i>	
The Structural Interactions Between T Cell Receptors and MHC–Peptide Complexes Place Physical Limits on Self–Nonself Discrimination	19
<i>K. W. Wucherpfennig</i>	
A Virus-Induced Molecular Mimicry Model of Multiple Sclerosis	39
<i>J. K. Olson, A. M. Ercolini, and S. D. Miller</i>	
Suppression of Autoimmunity via Microbial Mimics of Altered Peptide Ligands	55
<i>L. Steinman, P. J. Utz, and W. H. Robinson</i>	
Molecular and Cellular Mechanisms, Pathogenesis, and Treatment of Insulin-Dependent Diabetes Obtained Through Study of a Transgenic Model of Molecular Mimicry	65
<i>M. B. A. Oldstone</i>	
<i>Trypanosoma cruzi</i> -Induced Molecular Mimicry and Chagas’ Disease	89
<i>N. Gironès, H. Cuervo, and M. Fresno</i>	
HTLV-1 Induced Molecular Mimicry in Neurological Disease	125
<i>S. M. Lee, Y. Morcos, H. Jang, J. M. Stuart, and M. C. Levin</i>	
Molecular Mimicry: Anti-DNA Antibodies Bind Microbial and Nonnucleic Acid Self-Antigens	137
<i>J. S. Rice, C. Kowal, B. T. Volpe, L. A. DeGiorgio, and B. Diamond</i>	
<i>Chlamydia</i> and Antigenic Mimicry	153
<i>K. Bachmaier and J. M. Penninger</i>	
Subject Index	165
