

Space Physics

An Introduction to Plasmas and Particles in the Heliosphere and Magnetospheres

Bearbeitet von
May-Britt Kallenrode

erweitert 2004. Buch. xiv, 482 S. Hardcover

ISBN 978 3 540 20617 0

Format (B x L): 15,5 x 23,5 cm

Gewicht: 907 g

[Weitere Fachgebiete > Technik > Sonstige Technologien, Angewandte Technik > Weltraumforschung](#)

schnell und portofrei erhältlich bei

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

Part I Plasmas: The Basics

1	Introduction	3
1.1	Neutral Gases and Plasmas	3
1.2	Characterization of a Plasma	5
1.3	Plasmas in Space	7
1.4	A Brief History of Space Research	11
	Exercises and Problems	14
2	Charged Particles in Electromagnetic Fields	17
2.1	Electromagnetic Fields	17
2.1.1	Maxwell's Equations in Vacuum	18
2.1.2	Transformation of Field Equations	19
2.1.3	Generalized Ohm's Law	20
2.1.4	Energy Equation of the Electromagnetic Field	21
2.2	Particle Motion in Electromagnetic Fields	22
2.2.1	Lorentz Force and Gyration	23
2.2.2	Useful Definitions	25
2.3	Drifts of Particles in Electromagnetic Fields	28
2.3.1	The Concept of the Guiding Center	28
2.3.2	Crossed Magnetic and Electric Fields: $\mathbf{E} \times \mathbf{B}$ Drift	28
2.3.3	Magnetic and Gravitational Fields	30
2.3.4	Inhomogeneous Magnetic Fields	32
2.3.5	Curvature Drift	33
2.3.6	Drifts Combined with Changes in Particle Energy	34
2.3.7	Drift Currents in Plasmas	35
2.4	Adiabatic Invariants	35
2.4.1	First Adiabatic Invariant: The Magnetic Moment	36
2.4.2	Magnetic Mirrors and Bottles	38
2.4.3	Second Adiabatic Invariant: Longitudinal Invariant	41
2.4.4	Third Adiabatic Invariant: Flux Invariant	43
2.5	Summary	43
	Exercises and Problems	44

3	Magnetohydrodynamics	47
3.1	From Hydrodynamics to Magnetohydrodynamics	48
3.1.1	Partial and Convective Derivatives	48
3.1.2	Equation of Motion or Momentum Balance	49
3.1.3	Equation of Continuity	55
3.1.4	Equation of State	56
3.2	Basic Equations of MHD	57
3.2.1	Two-Fluid Description	59
3.3	Magnetohydrostatics	60
3.3.1	Magnetic Pressure	60
3.3.2	Magnetic Tension	63
3.4	Magnetohydrokinematics	66
3.4.1	Frozen-in Magnetic Fields	66
3.4.2	Deformation and Dissipation of Fields	68
3.5	Reconnection	74
3.6	The Magnetohydrodynamic Dynamo	79
3.6.1	The Idea	79
3.6.2	The Statistical Dynamo	80
3.6.3	The $\alpha\Omega$ Dynamo	82
3.7	Debye Shielding	84
3.8	Summary	87
	Exercises and Problems	87
4	Plasma Waves	89
4.1	What is a Wave?	90
4.1.1	Wave Parameters	90
4.1.2	Linearization of the Equations: Perturbation Theory	91
4.1.3	Reynolds Axioms	91
4.1.4	Linearized MHD Equations	93
4.2	Magnetohydrodynamic Waves	94
4.2.1	Alfvén Waves	94
4.2.2	Magneto-Sonic Waves	96
4.2.3	MHD Waves Oblique to the Field	98
4.3	Electrostatic Waves in Non-magnetic Plasmas	99
4.3.1	Plasma Oscillations	99
4.3.2	Electron Plasma Waves (Langmuir Waves)	101
4.3.3	Ion-Acoustic Waves (Ion Waves)	102
4.4	Electrostatic Waves in Magnetized Plasmas	103
4.4.1	Electron Oscillations Perpendicular to $\mathbf{B}$ (Upper Hybrid Frequency)	103
4.4.2	Electrostatic Ion Waves Perpendicular to $\mathbf{B}$ (Ion Cyclotron Waves)	104
4.4.3	Lower Hybrid Frequency	105
4.5	Electromagnetic Waves in Non-magnetized Plasmas	105
4.6	Electromagnetic Waves in Magnetized Plasmas	107

4.6.1	Electromagnetic Waves Perpendicular to $\mathbf{B}_0$	107
4.6.2	Waves Parallel to the Magnetic Field: Whistler (R-Waves) and L-Waves	109
4.7	Summary	111
	Exercises and Problems	112
5	Kinetic Theory	113
5.1	The Distribution Function	113
5.1.1	Phase Space and Distribution Function	113
5.1.2	Maxwell's Velocity Distribution	114
5.1.3	Other Distributions	116
5.1.4	Distribution Function and Measured Quantities	118
5.2	Basic Equations of Kinetic Theory	118
5.2.1	The Boltzmann Equation	119
5.2.2	The Vlasov Equation	120
5.2.3	The Fokker–Planck Equation	121
5.3	Collisions	123
5.3.1	Collisions Between Neutrals	123
5.3.2	Collisions Between Charged Particles	125
5.4	Collisions Between Charged Particles: Formally	127
5.4.1	Coulomb Collisions: Unscreened Potential	127
5.4.2	Decelerating Force Between Particles (Drag)	129
5.4.3	Coulomb Collisions: Screened Potential	130
5.5	Summary	131
	Exercises and Problems	132

Part II Space Plasmas

6	Sun and Solar Wind:	
	Plasmas in the Heliosphere	135
6.1	The Sun	135
6.1.1	Nuclear Fusion	137
6.1.2	Solar Neutrinos	138
6.1.3	Structure of the Sun	139
6.1.4	The Solar Atmosphere	141
6.1.5	The Coronal Magnetic Field	145
6.2	The Solar Wind	149
6.2.1	Properties	149
6.2.2	Solar Wind Models	152
6.2.3	Coronal Heating and Solar Wind Acceleration	156
6.3	The Interplanetary Magnetic Field (IMF)	158
6.3.1	Spiral Structure	158
6.3.2	Sector Structure	160
6.3.3	The Ballerina Model	161

6.3.4	Corotating Interaction Regions	162
6.3.5	The Heliosphere During the Solar Cycle	163
6.4	Plasma Waves in Interplanetary Space	164
6.4.1	Power-Density Spectrum	165
6.4.2	Waves or Turbulence?	166
6.5	The Three-Dimensional Heliosphere	168
6.6	The Active Sun	170
6.6.1	The Solar Cycle	170
6.6.2	A Simple Model of the Solar Cycle	173
6.6.3	Stellar Activity	178
6.7	Flares and Coronal Mass Ejections	179
6.7.1	Electromagnetic Radiation	180
6.7.2	Classes of Flares	183
6.7.3	Coronal Mass Ejections	185
6.7.4	Coronal Mass Ejections, Flares, and Coronal Shocks . .	187
6.7.5	Models of Coronal Mass Ejections (CMEs)	188
6.7.6	Models of Flares	190
6.7.7	Magnetic Clouds: CMEs in Interplanetary Space	193
6.7.8	Interplanetary Shocks	194
6.8	Shock Waves	196
6.8.1	Information, Dissipation, and Non-linearity	197
6.8.2	The Shock's Rest Frame	199
6.8.3	Collisionless Shock Waves	200
6.8.4	Shock Conservation Laws	200
6.8.5	Jump Conditions and Discontinuities	203
6.8.6	Shock Geometry	204
6.8.7	Fast and Slow Shocks	205
6.8.8	The Coplanarity Theorem	207
6.8.9	The Shock Normal Direction	207
6.9	What I Did Not Tell You	208
6.10	Summary	210
	Exercises and Problems	210
7	Energetic Particles in the Heliosphere	213
7.1	Particle Populations in the Heliosphere	213
7.1.1	Populations and Sources	213
7.1.2	Relation to the Solar Cycle	216
7.2	Solar Energetic Particles and Classes of Flares	218
7.3	Interplanetary Transport – Theoretical Background	221
7.3.1	Spatial Diffusion	222
7.3.2	Pitch Angle Diffusion	229
7.3.3	Diffusion in Momentum Space	230
7.3.4	Wave–Particle Interactions	231
7.3.5	Electromagnetic Waves	234
7.3.6	Transport Equations	235

7.4	Interplanetary Propagation – Observations	238
7.4.1	Fits with a Transport Equation	238
7.4.2	Analysis of Magnetic Field Fluctuations	239
7.4.3	Comparison Between Both Approaches	239
7.5	Particle Acceleration at Shocks – Theory	242
7.5.1	Shock Drift Acceleration (SDA)	243
7.5.2	Diffusive Shock Acceleration	245
7.5.3	Diffusive Shock Acceleration and Self-Generated Turbulence	250
7.5.4	Stochastic Acceleration	251
7.5.5	The Shock as a Non-linear System	252
7.5.6	Summary Shock Acceleration	254
7.6	Particles at Shocks in Interplanetary Space	255
7.6.1	Low-Energy Particles (Tens of keV) at Travelling Shocks	256
7.6.2	High-Energetic Particles (MeVs) at Travelling Shocks	258
7.6.3	Particles at CIR Shocks	264
7.6.4	Particles at Planetary Bow Shocks	265
7.7	Galactic Cosmic Rays (GCRs)	267
7.7.1	Variations	267
7.7.2	Modulation Models	273
7.8	What I Did Not Tell You	277
7.9	Summary	278
	Exercises and Problems	279
8	The Terrestrial Magnetosphere	281
8.1	The Geomagnetic Field	282
8.1.1	Description of the Geomagnetic Field	282
8.1.2	Variability of the Internal Field	285
8.1.3	The Terrestrial Dynamo	290
8.2	Topology of the Magnetosphere	291
8.2.1	Overview	291
8.2.2	The Magnetopause	292
8.2.3	Polar Cusps	295
8.2.4	The Tail and the Polar Caps	295
8.2.5	Magnetosheath and Bow Shock	298
8.3	Plasmas and Currents in the Magnetosphere	300
8.3.1	The Atmosphere	300
8.3.2	The Ionosphere	302
8.3.3	Magnetosphere–Ionosphere Coupling	306
8.3.4	The Plasmasphere	309
8.3.5	The Geosphere	311
8.3.6	The Outer Magnetosphere	312
8.4	The Open Magnetosphere: Reconnection Applied	313
8.4.1	Convection of Plasma Into the Magnetosphere	313

8.4.2	Flux Transfer Events	317
8.4.3	Release of Accumulated Matter: Substorms	318
8.4.4	Closed, but Only Almost Closed	322
8.5	Geomagnetic Disturbances	323
8.5.1	Daily Variations	323
8.5.2	Geomagnetic Indices	323
8.5.3	Geomagnetic Pulsations	324
8.5.4	Geomagnetic Storms	324
8.5.5	Geomagnetic Activity on Longer Time Scales	326
8.6	Aurorae	329
8.6.1	Historical Excursion	330
8.6.2	Beginning of the Scientific Analysis	332
8.6.3	Modern Interpretation	334
8.6.4	Electron Acceleration	335
8.6.5	Excitation of the Atmosphere	337
8.6.6	Shape and Local Time	338
8.7	Energetic Particles in the Magnetosphere	339
8.7.1	The Radiation Belts	340
8.7.2	Galactic Cosmic Rays – Størmer Orbits	349
8.7.3	Solar Energetic Particles – Polar Cap Absorption	352
8.8	What I Did Not Tell You	353
8.9	Summary	354
	Exercises and Problems	355
9	Planetary Magnetospheres	357
9.1	The Planets	357
9.2	Planets with a Magnetic Field	358
9.2.1	Mercury	359
9.2.2	Jupiter	360
9.2.3	Saturn	362
9.2.4	Uranus	363
9.2.5	Neptune	365
9.3	Planets Without a Magnetic Field	366
9.4	Comparison of Planetary Magnetospheres	367
9.4.1	Structures of Planetary Magnetospheres	367
9.4.2	Sizes	368
9.4.3	Plasma Sources	369
9.4.4	Upstream of the Bow Shock: The Foreshocks	370
9.4.5	Radiation Belts	371
9.5	Summary	374
	Exercises and Problems	374

10 Solar–Terrestrial Relationships	375
10.1 Solar–Terrestrial Relationships: Overview	375
10.2 Solar Activity, Climate, and Culture	377
10.3 Solar Electromagnetic Radiation	380
10.3.1 The Climate System	380
10.3.2 Short-Term Variability of the Solar Constant	381
10.3.3 Long-Term Variability of the Solar Constant	382
10.3.4 At the Fringes of the Electromagnetic Spectrum	384
10.4 Energetic Particles and the Atmosphere	384
10.4.1 Precipitating Energetic Particles: Primary Consequences	385
10.4.2 Precipitating Particles and Ozone	388
10.4.3 Precipitating Particles and Thermospheric Circulation	393
10.4.4 Precipitating Particles and the Global Electric Circuit	394
10.4.5 Solar Cycle Length, Galactic Cosmic Rays, and Cloud Cover	396
10.5 Sector Boundaries, Droughts, and Thunderstorms: Sun and Weather	397
10.5.1 Droughts in the Western US	397
10.5.2 Sector Boundaries and Weather Forecast	398
10.5.3 Solar Cycle Signals in Tropospheric Winds	398
10.6 The Technical Environment and Solar Activity: Geomagnetic Storms	400

Part III The Methods

11 Instrumentation	407
11.1 Field Instruments	407
11.1.1 The Magnetic Field	408
11.1.2 Electric Field Measurements	410
11.1.3 Wave Measurements	411
11.2 Plasma Instruments	412
11.2.1 Instruments for Dense Plasmas	412
11.2.2 Instruments for Rarefied Plasmas	414
11.2.3 Energetic Particle Instruments	416
11.3 Supplementary Ground-Based Observations	419
12 Science in a Complex Environment	421
12.1 Physics in a Complex Environment	421
12.2 The Measurement Problem	422
12.3 The Data Interpretation Problem	424
12.4 The Modeling Problem	427
12.5 Is This Still Physics?	428

Appendix	431
A.1 List of Symbols	431
A.2 Equations in the SI and cgs System	434
A.3 Useful Relations	435
A.3.1 Vector Calculus	435
A.3.2 Cylindrical Coordinates	436
A.3.3 Spherical Coordinates	437
A.4 Useful Numbers	437
A.4.1 Fundamental Constants	437
A.4.2 Numbers in Plasmas	437
A.4.3 Conversion of Units	438
A.5 Useful Internet Resources	438
A.5.1 Space Physics – General	438
A.5.2 Textbooks and other Educational Material	439
A.5.3 Missions	439
A.5.4 The Sun	440
A.5.5 Solar–Terrestrial Relationships	440
A.5.6 Aurorae	441
A.5.7 Data	441
References	443
Index	471
