

A Unified Architecture for Speech-Controlled Robot Behavior Based on Nonlinear Dynamics

von
Rainer Menzner, Werner von Seelen

1. Auflage

A Unified Architecture for Speech-Controlled Robot Behavior Based on Nonlinear Dynamics – Menzner / Seelen

schnell und portofrei erhältlich bei beck-shop.de DIE FACHBUCHHANDLUNG

Thematische Gliederung:

[Robotik](#)

ibidem 2001

ISBN 978 3 89821 099 7

Contents

1	Introduction	1
1.1	Autonomous Robotics: A Brief History	1
1.1.1	What are Robots?	1
1.1.2	Cybernetics	4
1.1.3	Artificial Intelligence (AI)	4
1.1.4	Behavior-Based Systems	6
1.2	The Dynamic Approach	7
1.2.1	General Idea	7
1.2.2	Application in Behavior-Based Robotics	7
1.2.3	Principles of the Dynamic Approach to Robotics	9
1.2.4	The Relation to Control Theory	9
1.3	Man-Machine Interaction	10
1.3.1	Considerations on Efficient Interaction	10
1.3.2	Natural Communication via Speech	12
1.4	Outline of the Thesis	13
2	Fundamentals of Dynamical Systems	15
2.1	General Terms	15
2.1.1	Mathematical Definition	15
2.1.2	Linear Systems	17
2.1.3	Fixed Points	17
2.1.4	Bifurcations	19
2.1.5	Phase Plot Representation	21
2.1.6	Time Scales	22
2.2	Important Concepts	23
2.2.1	Multiple Contributions	23
2.2.2	Moving Attractors and Time Scale Separation	25
2.2.3	The Slaving Principle	27
2.3	Dynamic Neural Fields	29
2.3.1	Introduction and Definitions	30
2.3.2	Relation to Biological Systems	32
2.3.3	Equilibrium Solutions in the Absence of Input	35
2.3.3.1	Existence of Equilibrium Solutions	35

2.3.3.2	Stability of Equilibrium Solutions	39
2.3.3.3	Summary and Examples	41
2.3.4	The Stimulus Signal	42
2.3.5	Multiple Peak Solutions and Interaction	44
2.4	Discretization and Numerical Computation	45
2.4.1	Discretization in Time	46
2.4.2	Choosing the Global Time Scale	47
2.4.3	Spatial Discretization in Dynamic Fields	48
2.5	The Dynamic Approach in an Example	50
3	Main Functional Units	53
3.1	Outline of the Target System Behavior	53
3.2	A System for Behavior Arbitration	54
3.2.1	Introduction to the Behavior Model	54
3.2.2	Interaction among Behavioral Modules	56
3.2.2.1	Sensor Conditions	56
3.2.2.2	Logical Interrelations	56
3.2.2.3	Dynamic Interaction	57
3.2.3	Mathematical Formulation	59
3.2.3.1	The n -Dynamics	59
3.2.3.2	Combining Interaction Types	62
3.2.3.3	The β -Dynamics	64
3.2.3.4	The ρ -Dynamics	68
3.2.3.5	The Disturbance Signal ξ	70
3.2.4	The Arbitration System in Practice	72
3.2.4.1	Choosing Operating Parameters	72
3.2.4.2	The Activation Cycle on the Signal Level	73
3.2.4.3	An Example System	75
3.3	Linear Attractor Dynamics as a General Design Tool	76
3.3.1	The Aim and Initial Assumptions	76
3.3.2	Advantages of Linear Attractor Dynamics	77
3.3.3	Mathematical Approach	77
3.3.4	A System for Generating Effector Control Values	78
3.3.5	Generalization	81
3.4	Neural Fields for Fusing Speech and Vision Sensor	81
3.4.1	The Sensor Fusion Task	82
3.4.2	Suitability of Neural Fields	82
3.4.3	Moving Peaks of Constant Shape	83
3.4.3.1	Mathematical Derivation	84
3.4.3.2	Moving Peaks in the Presence of Stimulus Signals	86
3.4.3.3	Kernel Derivative Versus Input Derivative	89
3.4.4	General Field Design Criteria	90
3.4.4.1	Cyclic Neural Fields	90

3.4.4.2	Field and Kernel Width	92
3.4.5	The Navigation Task	92
3.4.5.1	General Description	92
3.4.5.2	Field Design	93
3.4.5.3	The Stimulus Signal	95
3.4.5.4	Summary	96
3.4.6	The Pointing Task	97
3.4.6.1	General Description	97
3.4.6.2	The Procedure of Pointing	98
3.4.6.3	Field Design	99
3.4.6.4	The Stimulus Signal	101
3.4.6.5	Summary	103
4	Experimental Setup	105
4.1	Target System Specification	105
4.1.1	Keyword Vocabulary	105
4.1.2	Moving Mode	106
4.1.3	Turning Mode	107
4.1.4	Pointing Mode	107
4.2	System Architecture	108
4.2.1	An Abstract Robot	108
4.2.1.1	Effector Control Interface	108
4.2.1.2	Sensor Readings	109
4.2.1.3	An Action Cycle	110
4.2.2	Structural Organization of the Dynamics	111
4.2.3	Mathematical Description	114
4.2.3.1	The Arbitration System	114
4.2.3.2	The Neural Field for Navigation	116
4.2.3.3	The Neural Field for Pointing	118
4.2.3.4	Linear Attractor Dynamics for Translation Control	120
4.2.3.5	Linear Attractor Dynamics for Rotation Control	120
4.2.3.6	Linear Attractor Dynamics for Pointer Control	121
4.3	Interfacing Controlling Dynamics and Robot	121
4.4	The JAVAROBOT Simulation	124
4.4.1	General Description	124
4.4.2	Keyword Speech Sensor	127
4.4.3	Visual Sensor	127
4.5	The Autonomous Robot ARNOLD	129
4.5.1	General Description	129
4.5.2	Keyword Speech Sensor	130
4.5.3	Visual Sensor	132

5	Results	137
5.1	Results on JAVAROBOT	137
5.1.1	Operating Conditions	137
5.1.2	Experiment 1	137
5.1.3	Experiment 2	144
5.2	Results on ARNOLD	149
5.2.1	Operating Conditions	149
5.2.2	Experiment	150
6	Discussion	161
6.1	Summary	161
6.2	Related Work	164
6.3	Conclusion and Outlook	167
	References	173
