

# Origin and Evolution of the Vertebrate Telencephalon, with Special Reference to the Mammalian Neocortex

Bearbeitet von  
Francisco Aboitiz, J Montiel

1. Auflage 2007. Taschenbuch. vii, 121 S. Paperback

ISBN 978 3 540 49760 8

Format (B x L): 15,5 x 23,5 cm

Gewicht: 207 g

[Weitere Fachgebiete > Psychologie > Allgemeine Psychologie / Grundlagenfächer > Biologische Psychologie, Neuropsychologie, Psychophysiologie](#)

schnell und portofrei erhältlich bei

The logo for beck-shop.de features the text "beck-shop.de" in a bold, red, sans-serif font. Above the "i" in "shop" are three red dots of increasing size. Below the main text, the words "DIE FACHBUCHHANDLUNG" are written in a smaller, red, all-caps, sans-serif font.

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung [beck-shop.de](http://beck-shop.de) ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

|          |                                                                                        |           |
|----------|----------------------------------------------------------------------------------------|-----------|
| <b>1</b> | <b>Introduction</b>                                                                    | <b>1</b>  |
| <b>2</b> | <b>Evolution of the Vertebrate Nervous System and Telencephalon</b>                    | <b>7</b>  |
| 2.1      | Animal Phylogenetic Relationships                                                      | 7         |
| 2.1.1    | Origin and Diversification of Metazoans                                                | 7         |
| 2.1.2    | Phylogenetic Origins of the Nervous System                                             | 8         |
| 2.1.3    | Summary                                                                                | 14        |
| 2.2      | The Origin of Vertebrates                                                              | 15        |
| 2.2.1    | Early Theories and Fossil Evidence                                                     | 15        |
| 2.2.2    | The Neural Crest and Placodes in Vertebrate Origins                                    | 16        |
| 2.2.3    | Olfactory Placode and Epithelium: Association with Adenohypophysis                     | 19        |
| 2.2.4    | Origin of the Telencephalon                                                            | 21        |
| 2.2.5    | Summary                                                                                | 22        |
| 2.3      | Evolution of the Telencephalon in Vertebrates                                          | 24        |
| 2.3.1    | Taxonomical Relationships Among Vertebrates and Their Early Evolution                  | 24        |
| 2.3.2    | Evolution of the Cerebral Hemispheres: Ventral Telencephalon                           | 28        |
| 2.3.3    | The Brain of Jawless Fishes and the Organization of the Ancestral Dorsal Telencephalon | 29        |
| 2.3.4    | The Pallium in Jawed Vertebrates                                                       | 31        |
| 2.3.5    | Summary                                                                                | 33        |
| <b>3</b> | <b>Origin of the Mammalian Brain</b>                                                   | <b>34</b> |
| 3.1      | The First Mammals                                                                      | 35        |
| 3.1.1    | Fossil Mammals and Their Brains                                                        | 35        |
| 3.1.2    | Summary                                                                                | 38        |
| 3.2      | Origin of the Mammalian Neocortex: Hypotheses on Homology                              | 38        |
| 3.2.1    | Mammalian Brain Expansion and the Origin of the Neocortex                              | 38        |
| 3.2.2    | Hypotheses for Neocortical Origins                                                     | 39        |
| 3.2.3    | The Recapitulation Hypothesis: Connectional Evidence                                   | 40        |
| 3.2.4    | The Dorsal Cortex of Reptiles: Subicular and Neocortical Characteristics               | 41        |
| 3.2.5    | Differences in Connectivity Between the DVR and the Neocortex                          | 43        |
| 3.2.6    | Summary                                                                                | 46        |
| 3.3      | Embryological Evidence                                                                 | 47        |
| 3.3.1    | Developmental Criteria for Homology                                                    | 47        |
| 3.3.2    | Dorsoventral Gradients and Expansion of the Dorsal Pallium                             | 52        |
| 3.3.3    | Summary                                                                                | 53        |
| 3.4      | The Olfactory–Hippocampal Hypothesis                                                   | 54        |

|       |                                                                                                                      |     |
|-------|----------------------------------------------------------------------------------------------------------------------|-----|
| 3.4.1 | A Functional Interpretation of Dorsal Pallial Expansion<br>in Mammalian Origins . . . . .                            | 54  |
| 3.4.2 | Summary . . . . .                                                                                                    | 58  |
| 3.5   | Origin of Neocortical Lamination . . . . .                                                                           | 59  |
| 3.5.1 | Laminar Organization of the Neocortex . . . . .                                                                      | 59  |
| 3.5.2 | Comparison of Mammalian Neocortex and Reptilian Cortex:<br>Layer Homologies . . . . .                                | 60  |
| 3.5.3 | Is There a Preplate in Reptiles? . . . . .                                                                           | 62  |
| 3.5.4 | Origin of the Inside-out Developmental Gradient . . . . .                                                            | 64  |
| 3.5.5 | Pioneer Neurons and the Transition from a Tangential<br>to a Radial Synaptic Organization in the Neocortex . . . . . | 66  |
| 3.5.6 | Summary . . . . .                                                                                                    | 67  |
| 3.6   | Expansion of the Neocortex . . . . .                                                                                 | 68  |
| 3.6.1 | Multiplication of Cortical Areas . . . . .                                                                           | 68  |
| 3.6.2 | Summary . . . . .                                                                                                    | 71  |
| 4     | <b>Discussion</b> . . . . .                                                                                          | 71  |
| 4.1   | An Overview . . . . .                                                                                                | 71  |
| 4.1.1 | Early Neuronal Differentiation . . . . .                                                                             | 71  |
| 4.1.2 | Patterning . . . . .                                                                                                 | 72  |
| 4.1.3 | Diversification of the Hemispheres and Neocortical Origins . . . . .                                                 | 74  |
| 4.1.4 | Olfaction, the Hippocampus and the Amygdala . . . . .                                                                | 75  |
| 4.1.5 | Cortical Lamination . . . . .                                                                                        | 75  |
| 4.1.6 | Tangential Expansion and the Origin of New Areas . . . . .                                                           | 77  |
| 4.2   | Issues with Evolutionary Theory . . . . .                                                                            | 77  |
| 4.2.1 | Genetic Conservatism Versus Morphological Diversity . . . . .                                                        | 77  |
| 4.2.2 | Development as a Clue to Evolution . . . . .                                                                         | 78  |
| 4.2.3 | Developmental Processes and Homology Criteria . . . . .                                                              | 79  |
| 4.2.4 | Development, Adaptation, and Behavior . . . . .                                                                      | 81  |
| 4.3   | Final Comments . . . . .                                                                                             | 83  |
|       | <b>References</b> . . . . .                                                                                          | 85  |
|       | <b>Subject Index</b> . . . . .                                                                                       | 113 |
