## PART I THE BASICS OF ATOMIC FORCE MICROSCOPY

|                                                                                   |    |
|-----------------------------------------------------------------------------------|----|
| 1 How the Atomic Force Microscope Works? . . . . .                                | 3  |
| <i>Bruno Torre, Davide Ricci, and Pier Carlo Braga</i>                            |    |
| 2 Measurement Methods in Atomic Force Microscopy . . . . .                        | 19 |
| <i>Bruno Torre, Claudio Canale, Davide Ricci, and Pier Carlo Braga</i>            |    |
| 3 Recognizing and Avoiding Artifacts in Atomic Force Microscopy Imaging . . . . . | 31 |
| <i>Claudio Canale, Bruno Torre, Davide Ricci, and Pier Carlo Braga</i>            |    |

## PART II MOLECULE IMAGING

|                                                                                                                                                     |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 4 Imaging the Spatial Orientation of Subunits Within Membrane Receptors by Atomic Force Microscopy . . . . .                                        | 47  |
| <i>Stewart M. Carnally, J. Michael Edwardson, and Nelson P. Barrera</i>                                                                             |     |
| 5 High Resolution Imaging of Immunoglobulin G Antibodies and Other Biomolecules Using Amplitude Modulation Atomic Force Microscopy in Air . . . . . | 61  |
| <i>Sergio Santos and Neil H. Thomson</i>                                                                                                            |     |
| 6 Atomic Force Microscopy of Ex Vivo Amyloid Fibrils . . . . .                                                                                      | 81  |
| <i>Claudio Canale, Annalisa Relini, and Alessandra Gliozzi</i>                                                                                      |     |
| 7 Studying Collagen Self-Assembly by Time-Lapse High-Resolution Atomic Force Microscopy . . . . .                                                   | 97  |
| <i>Clemens M. Franz and Daniel J. Muller</i>                                                                                                        |     |
| 8 Atomic Force Microscopy Imaging of Human Metaphase Chromosomes in Liquid . . . . .                                                                | 109 |
| <i>Osamu Hoshi and Tatsuo Ushiki</i>                                                                                                                |     |
| 9 Atomic Force Microscopy of Proteasome Assemblies . . . . .                                                                                        | 117 |
| <i>Maria Gaczynska and Pawel A. Osmulski</i>                                                                                                        |     |
| 10 Atomic Force Microscopy of Isolated Mitochondria . . . . .                                                                                       | 133 |
| <i>Bradley E. Layton and M. Brent Boyd</i>                                                                                                          |     |
| 11 Imaging and Interrogating Native Membrane Proteins Using the Atomic Force Microscope . . . . .                                                   | 153 |
| <i>Andreas Engel</i>                                                                                                                                |     |

## PART III NANOSCALE SURFACE ANALYSIS AND CELL IMAGING

- 12 Atomic Force Microscopy Investigation of Viruses . . . . . 171  
*Alexander McPherson and Yurii G. Kuznetsov*
- 13 Determination of the Kinetic On- and Off-Rate  
of Single Virus–Cell Interactions. . . . . 197  
*Christian Rankl, Linda Wildling, Isabel Neundlinger,  
Ferry Kienberger, Hermann Gruber, Dieter Blaas,  
and Peter Hinterdorfer*
- 14 Atomic Force Microscopy as a Tool for the Study  
of the Ultrastructure of Trypanosomatid Parasites. . . . . 211  
*Wanderley de Souza, Gustavo M. Rocha, Kildare Miranda,  
Paulo M. Bisch, and Gilberto Weissmuller*
- 15 Normal and Pathological Erythrocytes Studied by  
Atomic Force Microscopy . . . . . 223  
*Andreas Ebner, Hermann Schillers, and Peter Hinterdorfer*
- 16 The Growth Cones of Living Neurons Probed by  
the Atomic Force Microscope . . . . . 243  
*Davide Ricci, Massimo Grattarola, and Mariateresa Tedesco*
- 17 Highlights on Ultrastructural Pathology of Human Sperm . . . . . 259  
*Narabari V. Joshi, Ibis Cruz, and Jesus A. Osuna*
- 18 High-Speed Atomic Force Microscopy and Biomolecular Processes. . . . . 285  
*Takayuki Uchihashi and Toshio Ando*

## PART IV NON-TOPOGRAPHICAL APPLICATIONS (FORCE-SPECTROSCOPY)

- 19 Atomic Force Microscopy in Mechanobiology:  
Measuring Microelastic Heterogeneity of Living Cells. . . . . 303  
*Evren U. Azeloglu and Kevin D. Costa*
- 20 Force-Clamp Measurements of Receptor–Ligand Interactions. . . . . 331  
*Félix Rico, Calvin Chu, and Vincent T. Moy*
- 21 Measuring Cell Adhesion Forces: Theory and Principles . . . . . 355  
*Martin Benoit and Christine Selhuber-Unkel*
- 22 Nanoscale Investigation on *E. coli* Adhesion to Modified Silicone Surfaces . . . . . 379  
*Ting Cao, Haiying Tang, Xuemei Liang, Anfeng Wang,  
Gregory W. Auner, Steven O. Salley, and K.Y. Simon Ng*

## PART V INVESTIGATING DRUG ACTION

- 23 Imaging Bacterial Shape, Surface, and Appendages Before and  
After Treatment with Antibiotics. . . . . 391  
*Pier Carlo Braga and Davide Ricci*
- 24 Thymol-Induced Alterations in *Candida albicans* Imaged  
by Atomic Force Microscopy . . . . . 401  
*Pier Carlo Braga and Davide Ricci*

|    |                                                                                                                                                 |     |
|----|-------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 25 | Atomic Force Microscope-Enabled Studies of Integrin–Extracellular Matrix Interactions in Vascular Smooth Muscle and Endothelial Cells . . . . . | 411 |
|    | <i>Zhe Sun and Gerald A. Meininger</i>                                                                                                          |     |
| 26 | Atomic Force Microscopy Studies on Circular DNA Structural Changes by Vincristine and Aspirin . . . . .                                         | 425 |
|    | <i>Zhongdang Xiao, Lili Cao, Dan Zhu, and Zuhong Lu</i>                                                                                         |     |

## PART VI ATOMIC FORCE MICROSCOPY AS A NANOTOOL

|    |                                                                                                                                                               |     |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 27 | Combined Atomic Force Microscopy and Fluorescence Microscopy . . . . .                                                                                        | 439 |
|    | <i>Miklós S.Z. Kellermayer</i>                                                                                                                                |     |
| 28 | Chemical Modifications of Atomic Force Microscopy Tips . . . . .                                                                                              | 457 |
|    | <i>Régis Barattin and Normand Voyer</i>                                                                                                                       |     |
| 29 | Atomic Force Microscopy as Nanorobot . . . . .                                                                                                                | 485 |
|    | <i>Ning Xi, Carmen Kar Man Fung, Ruiguo Yang, King Wai Chiu Lai, Donna H. Wang, Kristina Seiffert-Sinha, Animesh A. Sinha, Guangyong Li, and Lianqing Liu</i> |     |
|    | <i>Index</i> . . . . .                                                                                                                                        | 505 |
