

CONTENTS

PREFACE	xi
ACKNOWLEDGMENTS	xiii
NOTATION	xv
ABOUT THE AUTHORS	xix
1 INTRODUCTION	1
2 PERMEATION MODELING	7
2.1 Diffusion Membranes	8
2.1.1 Gas Separation	8
2.1.2 Pervaporation	11
2.2 Membrane Classification	13
3 INTRODUCTION TO GRAPHICAL TECHNIQUES IN MEMBRANE SEPARATIONS	15
3.1 A Thought Experiment	15
3.2 Binary Separations	16
3.3 Multicomponent Systems	20
3.3.1 Mass Balances	21
3.3.2 Plotting a Residue Curve Map	23

4	PROPERTIES OF MEMBRANE RESIDUE CURVE MAPS	29
4.1	Stationary Points	29
4.2	Membrane Vector Field	30
4.3	Unidistribution Lines	31
4.4	The Effect of α -Values on the Topology of M-RCMs	32
4.5	Properties of an Existing Selective M-RCM	34
4.5.1	Case 1: When the Permeate Side Is at Vacuum Conditions (i.e., $\pi_P \approx 0$)	34
4.5.2	Case 2: When the Permeate Pressure Is Nonzero (i.e., $\pi_P > 0$)	36
4.6	Conclusion	38
5	APPLICATION OF MEMBRANE RESIDUE CURVE MAPS TO BATCH AND CONTINUOUS PROCESSES	41
5.1	Introduction	41
5.2	Review of Previous Chapters	44
5.3	Batch Membrane Operation	45
5.3.1	Operating Leaves in Batch Permeation	45
5.3.2	Material Balances	46
5.3.3	Permeation Model	48
5.3.4	Operating Regions: Nonselective Membranes	48
5.3.5	Operating Regions: Selective Membranes	50
5.4	Permeation Time	52
5.5	Continuous Membrane Operation	54
5.5.1	Nonreflux Equipment	54
5.5.2	Reflux Equipment	58
5.6	Conclusion	64
6	COLUMN PROFILES FOR MEMBRANE COLUMN SECTIONS	65
6.1	Introduction to Membrane Column Development	66
6.1.1	Relevant Works in Membrane Column Research	67
6.2	Generalized Column Sections	68
6.2.1	The Difference Point Equation	70
6.2.2	Infinite Reflux	71
6.2.3	Finite Reflux	74

6.2.4	CPM Pinch Loci	76
6.3	Theory	80
6.3.1	Membrane Column Sections	80
6.3.2	The Difference Point Equation for an MCS	81
6.3.3	Permeation Modeling	82
6.3.4	Properties of the DPE	84
6.4	Column Section Profiles: Operating Condition 1	85
6.4.1	Statement	85
6.4.2	Mathematics	85
6.4.3	Membrane Residue Curve Map	85
6.5	Column Section Profiles: Operating Condition 2	87
6.5.1	Statement	87
6.5.2	Mathematics	87
6.5.3	Column Profile	88
6.5.4	Analysis	89
6.5.5	Pinch Point Loci	93
6.5.6	Further Column Profiles	94
6.5.7	Direction of δ_T	96
6.5.8	Direction of Integration	96
6.5.9	Crossing the MBT Boundary	97
6.6	Column Section Profiles: Operating Conditions 3 and 4	97
6.6.1	Statement	97
6.6.2	Mathematics	97
6.6.3	Column Profile	98
6.6.4	Pinch Point Loci	99
6.6.5	Analysis of Column Profile	100
6.6.6	Pinch Point	102
6.6.7	Further Column Profiles	102
6.6.8	Variations in X_Δ and r_Δ	104
6.7	Applications and Conclusion	105
7	NOVEL GRAPHICAL DESIGN METHODS FOR COMPLEX MEMBRANE CONFIGURATIONS	107
7.1	Introduction	108
7.2	Column Sections	110
7.2.1	Definition	110

7.2.2	The Difference Point Equation	111
7.2.3	Vapor–Liquid Equilibrium and Permeation Flux	113
7.2.4	Column Profiles	113
7.3	Complex Membrane Configuration Designs: General	114
7.3.1	Overview	114
7.3.2	Petlyuk Membrane Arrangement	114
7.3.3	Material Balances	116
7.4	Complex Membrane Configuration Designs: Operating Condition 1	117
7.4.1	Statement	117
7.4.2	Mathematics	117
7.4.3	Column Profiles	119
7.4.4	Requirements for Feasibility	120
7.4.5	Analysis and Behavior of Column Profiles	121
7.4.6	Feasible Coupled Columns	124
7.5	Complex Membrane Configuration Designs: Operating Condition 2	132
7.5.1	Statement	132
7.5.2	Mathematics	132
7.5.3	Column Profiles	133
7.5.4	Feasibility	134
7.6	Complex Membrane Configurations: Comparison with Complex Distillation Systems	138
7.7	Hybrid Distillation–Membrane Design	138
7.7.1	Overview	138
7.7.2	Material Balances	140
7.7.3	Feasibility	141
7.8	Conclusion	150
8	SYNTHESIS AND DESIGN OF HYBRID DISTILLATION–MEMBRANE PROCESSES	151
8.1	Introduction	152
8.2	Methanol/Butene/MTBE System	153
8.2.1	Design Requirements	155
8.3	Synthesis of a Hybrid Configuration	156

8.4	Design of a hybrid configuration	159
8.4.1	Column Sections of Hybrid Configuration	159
8.4.2	Degrees of Freedom	161
8.4.3	Generating Profiles for Hybrid Columns	163
8.4.4	Comparing Feasible Design Options	164
8.4.5	Attainable Region	164
8.5	Conclusion	167
9	CONCLUDING REMARKS	169
9.1	Conclusions	170
9.2	Recommendations and Future Work	171
9.3	Design Considerations	172
9.3.1	Processes for Which Membrane Separations Are Particularly Suitable	172
9.3.2	Processes for Which Membrane Operations Are Unsuitable	173
9.3.3	Pressure Difference as a Design Consideration	174
9.3.4	Effect of Reflux in Membrane Columns	175
9.4	Challenges for Membrane Process Engineering	176
