

Molecular Geometry of Body Pattern in Birds

Bearbeitet von
Antonio Lima-de-Faria

1. Auflage 2012. Buch. XI, 162 S. Hardcover

ISBN 978 3 642 25300 3

Format (B x L): 21 x 27,9 cm

Gewicht: 694 g

Weitere Fachgebiete > Chemie, Biowissenschaften, Agrarwissenschaften >
Wirbeltiere (Vertebrata) > Vögel (Ornithologie)

schnell und portofrei erhältlich bei

The logo for beck-shop.de features the text "beck-shop.de" in a bold, red, sans-serif font. Above the "i" in "shop" are three red dots of increasing size. Below the main text, the words "DIE FACHBUCHHANDLUNG" are written in a smaller, red, all-caps, sans-serif font.

DIE FACHBUCHHANDLUNG

Die Online-Fachbuchhandlung beck-shop.de ist spezialisiert auf Fachbücher, insbesondere Recht, Steuern und Wirtschaft. Im Sortiment finden Sie alle Medien (Bücher, Zeitschriften, CDs, eBooks, etc.) aller Verlage. Ergänzt wird das Programm durch Services wie Neuerscheinungsdienst oder Zusammenstellungen von Büchern zu Sonderpreisen. Der Shop führt mehr als 8 Millionen Produkte.

Contents

1 Introduction	1
1.1 To the Reader	1
1.2 Two Centuries of Ornithology – An Impressive Contribution to Science	1
1.3 The Preparation of the Plates Covering Specific Bird Traits	2
2 The Molecular Determination of a Bird's Pattern	3
2.1 A Succession of Molecular Events Leads to the Formation of a Bird	3
2.2 Permanence of Characters in Inheritance and Development	3
2.3 No Animal is Structurally or Physiologically Static – Programmed Cell Death	5
2.4 The Origin of Feathers is a Source of Controversy – They Evolved in Dinosaurs Before Birds Appeared	5
2.5 “Fingers Evolved to Play the Piano” – The Idea of Purpose in Biological Thought	5
2.6 The Biological Pattern of Birds is Written on their Feathers	5
2.7 Feather Growth and Replacement are Highly Ordered	6
2.8 The Regeneration of Feathers Occurs Periodically Being Dependent on Day Length and Hormone Activity	6
2.9 Hormones Control the Size, Shape and Colour of Feathers	6
2.10 Two Genes are Responsible for Feather Development	8
2.11 Proteins and Other Molecules Decide Hierarchical Order in Feather Branching	8
2.12 Chemistry and Physics of Colours	9
2.13 The Location of Pigments in Feathers is Guided by Proteins and Other Molecules	11
Sources of Figures	12
3 The Occurrence of Conspicuous Feathers at Different Body Locations and Their Genetic Interdependence	13
3.1 Two Long Feathers Emerging from the Tail	13
3.2 A Bird Gets its Body Trait Whether it Likes it or Not – DNA Follows its Own Atomic Evolution	16
3.3 Two Long and Short Feathers Protruding from the Head	18
3.4 Two Long Feathers Arising from the Wing	21
3.5 Particular Feathers Which Appear in Other Body Regions Indicating a Common Molecular Event	21
3.6 Feather Numbers Which are Multiples of Two Occur on Tail and Head	21
3.7 The Occurrence of Fixed Numbers in Other Animals	27
Sources of Figures	28

4 The Evolution of the Birds	29
4.1 The Origin of Birds is Disputed – Arboreal Monkeys were not Able to Develop Wings	29
4.2 The Long Journey that Led to the Establishment of Chemical Periodicity	30
4.3 From Chemical to Biological Periodicity	30
4.4 The Periodicity of Flight	31
4.5 Molecular Mechanisms that may be Responsible for Periodicity and the Emergence of Coherent Structures	34
4.6 Genetic Analysis Discloses that the Same Genes are Involved in the Flight of Insects and Birds – The Impossible Became Possible	35
4.7 The Direct Production of Flies with Four Wings	35
4.8 Wings in Birds may have Appeared “Ready-Made” and As “A Surprise” to the Animal – Birds with Extra Wings Produced in the Laboratory	35
4.9 Evolution was not Kind to the Birds – Wings have no Prehensile Fingers, Jaws Lack Teeth and the Penis is Rare	36
4.10 Evolution Created Serious Limitations in Birds	36
4.11 A Sense of Frustration or of Amputation may have Remained in a Bird’s Mind	36
4.12 The Constant Replacement of Teeth in Vertebrates – “Actually there is Method in this Seeming Madness”	39
4.13 Most Bird Species Lack a Penis But in Flatworms this Organ is Highly Developed	40
Sources of Figures	41
5 The Bird Genome and the Molecular Determination of Wings, Legs and Beaks	43
5.1 What is a Genome	43
5.2 The Unity of the Chromosome Remains a Question Mark	43
5.3 What was Revealed by Sequencing the Chicken Genome – Humans and Birds are Genetically Similar	44
5.4 Genome Sequencing of a Wild Bird Discloses That Song Behaviour is Dependent on RNA Expression in the Brain	45
5.5 Comparison of Large and Small Chromosomes in Birds	45
5.6 How to Obtain a Bird With Extra Wings and Legs – Genes Interact With Specific Proteins Producing Normal Wings and Legs	45
5.7 Whether Wings or Legs are Formed Depends on the Change in Position of a Protein	47
5.8 Great Variation in Beak Morphology – The Same Evolutionary Solution Occurred in Distant Islands and also on the Mainland	48
5.9 How to Recreate Beak Evolution – Proteins Shape the Beaks of Ducks and Finches	50
Sources of Figures	52
6 The Mental Ability of Birds Takes Many Forms	53
6.1 Cognition and the Use of Tools	53
6.2 Migration was a Highly Innovative Process that Demanded New Solutions	53
6.3 Landmasses have Moved Across the Earth’s Surface	54
6.4 The Emergence of New Continents, Seas and Deserts	55
6.5 Birds are Faced with Challenges – The Earth’s Magnetic Field is Under Constant Change	55
6.6 The Night Sky, with its Stars, Tells the Birds their Latitude – The Star Compass	55

6.7	The Physical Basis of the Magnetic Compass and the Evolution of Bird Migration	56
6.8	One-Eyed Sleep in Ducks and Brain Activity	58
6.9	Active Cooperation Among Birds Leads to Class Distinction	58
6.10	To Cope with Water Refraction Birds are Obligated to Make Corrections	58
6.11	Song Learning in Birds Depends on the Concentration of a Protein in their Brain and the Action of Hormones	60
6.12	The Starling Owned by Mozart Whistled the Theme of his Concerto	60
	Sources of Figures	62
7	How to Redesign the Body Pattern of an Organism	63
7.1	A Sophisticated Genetic Technology Opened the Way	63
7.2	Early Evidence on Drastic Structural Transformations – Feet on the Head ...	63
7.3	The Homeobox Genes – Formation of Identical Organs at Different Body Locations	63
7.4	Geneticists Transformed Curiosities into Valuable Developmental Keys – Eight-Legged and Four-Winged Flies were Produced	65
7.5	The Antenna to Leg Transformations	65
7.6	Eyes Formed on Wings, Legs and Antennae – The Unity of Body Construction	68
7.7	Mouse Genes Produce Eyes in Flies – The Importance of Eye Genes	68
7.8	The Wing of the Fly and the Human Fingers are Controlled by the Same Proteins	68
7.9	Feather Development is also Controlled by One of these Proteins	69
7.10	Moving from Gene Constructs to Embryonic Development – The Avian Molecular Clock	69
7.11	The Formation of Stripes Already in the Embryo	70
7.12	The Spacing of Feathers is Directed by a Protein	72
7.13	Change of Gene Action During Development – A Single Gene is Important but not Almighty Since an Antenna can Regenerate into a Leg	73
	Sources of Figures	74
8	The Molecular Geometry	75
8.1	What is Geometry?	75
8.2	Mathematicians and Physicists Know that there is not One, but Several Geometries – Euclidean and Non-Euclidean Geometries	75
8.3	Molecular Geometry is Multidimensional	75
8.4	Molecular Geometry is Dynamic and Ephemeral – Yet it Persists	76
8.5	Every Bird is a Lesson in Geometry	76
8.6	Emblematic Birds and Crystals do not Lie	77
8.7	The Uniqueness of the Avian Eye – It Surpasses the Human Eye	77
8.8	The Eye – A Focus of the Bird's Body	77
8.9	The Circularity of the Eye	79
8.10	Rings Around the Eye Extend to the Whole Head	79
8.11	Horizontal and Vertical Stripes that Cross the Eye are Accompanied by Others which Run Above and Below it	79
8.12	The Circularity of the Crest and its Division into Three Distinct Sections ...	82
8.13	Single, Double and Multiple Rings Around the Throat, Breast and Belly	86
8.14	Throats, Breasts and Bellies with Stripes Following the Head-Tail Axis	86
8.15	The Wing has a More Complex Circularity	87
8.16	The Bands and Concentric Semicircles of the Tail	94
8.17	Rump, Legs and Beak are also Part of the Body's Geometry	94

8.18 Surprisingly the Circularity Extends to the Whole Body in Single Birds	99
8.19 The Body Pattern of Birds Condensed in a Geometric Disk	101
8.20 The Geometric Disk – Like any Figure of Geometry – Represents a Simplification of Biological Reality	105
8.21 What About the Intermediate Cases?	105
Sources of Figures	113
9 The Symmetry of Birds Emerges as the Expression of an Uninterrupted	
Atomic Order	115
9.1 The Birds have Spoken	115
9.2 The Avian Bilateral Symmetry and its Internal Asymmetry	115
9.3 Nothing Essentially New Arose at the Biological Level	115
9.4 The Uninterrupted Transfer of Symmetries from Elementary Particles to Humans	116
9.5 DNA Knows Nothing about Symmetries and did not Seem to have been Able to Create Novel Ones	118
9.6 Mineral Structures, which have no Genes, Produce the Same Ordered Patterns Found in Living Organisms	118
9.7 The Final Pattern of a Living Organism Appears to Be Dependent on Atomic Processes Far Removed from the Genetic Code	118
9.8 Pure Symmetries are Thought to have only Existed in the Very Beginning of the Universe	121
Sources of Figures	122
10 Order is Present at Every Level But is not Total	123
10.1 The Genetic Code and the Translation Apparatus have Evolved in an Ordered Way	123
10.2 The Chromosome Maintains its Original Information by a Series of Efficient Repair Mechanisms	123
10.3 The Integrity of RNA is Maintained by the Elimination of Defective Molecules	124
10.4 Correction and Repair of Proteins	124
10.5 Hierarchical Determination of Molecular Transit in the Cell	124
10.6 Nuclear Architecture Regulates Gene Expression	126
10.7 Cell Division and Chromosome Movements are Orchestrated by Proteins ..	126
10.8 The Unexpected Regular Arrangement of Chromosomes in the Sperm	127
10.9 Previously Despised MicroRNAs and Proteins Coordinate Embryonic Morphogenesis	129
10.10 Directed Mutations Advantageous to the Organism are no Longer Disputed	130
10.11 Adaptation in Higher Organisms – One of the Black Boxes of Genetics ...	131
10.12 Order is Never Total – Yet “Errors” are of Particular Configurations Deviating only Slightly from the Initial Canalization	132
10.13 Without Atomic Order Any Molecular Edifice would have Collapsed	132
Sources of Figures	133
11 A Bird’s Plumage is a Stage Curtain Hiding a Molecular Scenario –	
An Overview	135
11.1 A Closing Remark	135
11.2 The Impact of Novel Technologies on Bird Studies	135

11.3	The Formation of Feathers and the Location of their Pigments are Molecularly Guided	136
11.4	The Wing is an Organ that Re-Emerged Periodically in Evolution – Similar Genes were Activated at Unexpected Times	137
11.5	Extra Wings, Extra Legs and Extra Feathers Appear “Ready-Made” in Birds and Occur at Different Body Locations	138
11.6	The Absence of Teeth in Birds Ought to have a Genetic Basis – Teeth, Like Feathers, are Continuously Replaced in Most Vertebrates	138
11.7	The Near Absence of Penis in Birds has an Evolutionary History Similar to that of the Wing	139
11.8	Beak Morphogenesis and its Final Shape are Decided by Modulating Calcium Signals	139
11.9	Bird Behaviour Depends on Genes and these are not Much Different from those of Humans	140
11.10	The Eye Appears as a Master Organ – Eyes can be Formed on Wings and Wings on Eyes	140
