Part I Finitely Generated Abelian Groups

1	Matrices with Integer Entries: The Smith Normal Form	9
1.1	Reduction by Elementary Operations	9
1.2	Existence of the Smith Normal Form	17
1.3	Uniqueness of the Smith Normal Form	32
2	Basic Theory of Additive Abelian Groups	47
2.1	Cyclic $\mathbb{Z}$ -Modules	47
2.2	Quotient Groups and the Direct Sum Construction	61
2.3	The First Isomorphism Theorem and Free Modules	75
3	Decomposition of Finitely Generated $\mathbb{Z}$-Modules	97
3.1	The Invariant Factor Decomposition	98
3.2	Primary Decomposition of Finite Abelian Groups	120
3.3	Endomorphism Rings and Isomorphism Classes of Subgroups and Quotient Groups	133

Part II Similarity of Square Matrices over a Field

4	The Polynomial Ring $F[x]$ and Matrices over $F[x]$	165
4.1	The Polynomial Ring $F[x]$ where F is a Field	166
4.2	Equivalence of Matrices over $F[x]$	187

5	$F[x]$-Modules: Similarity of $t \times t$ Matrices over a Field F	203
5.1	The $F[x]$ -Module $M(A)$	203
5.2	Cyclic Modules and Companion Matrices	227
6	Canonical Forms and Similarity Classes of Square Matrices over a Field	251
6.1	The Rational Canonical Form of Square Matrices over a Field	252
6.2	Primary Decomposition of $M(A)$ and Jordan Form	274
6.3	Endomorphisms and Automorphisms of $M(A)$	306
	Solutions to Selected Exercises	339
	Index	379
