1 Photo-Induced Phase Transition in RbMnFe Prussian Blue Analog-Based Magnet	
<i>H. Tokoro and S. Ohkoshi</i>	1
1.1 Introduction	1
1.2 Synthesis of Rubidium Manganese Hexacyanoferrate	2
1.3 Crystal Structure of Rubidium Manganese Hexacyanoferrate	3
1.4 Temperature-Induced Phase Transition	5
1.4.1 Phase Transition Phenomenon in Magnetic Susceptibility ..	5
1.4.2 Change in Electronic State	5
1.4.3 Structural Change	7
1.4.4 Mechanism	9
1.5 Ferromagnetism of the Low-Temperature Phase	9
1.5.1 Magnetic Ordering and Heat Capacity	9
1.5.2 Entropy and Enthalpy of Magnetic Phase Transition	10
1.5.3 Long-Range Magnetic Ordering and Exchange Coupling ...	12
1.5.4 Mechanism of Magnetic Ordering	14
1.6 Control of Temperature-Induced Phase Transition	14
1.6.1 Huge Thermal Hysteresis Loop and a Hidden Stable Phase .	14
1.6.2 Thermodynamical Analysis of Thermal Hysteresis Loop ...	16
1.7 Photo-Induced Phase Collapse	18
1.7.1 Non Phase Transition Material	18
1.7.2 Photo-Induced Structural Transition	19
1.7.3 Photo-Induced Phase Transition from a Metastable Phase to a Hidden Stable Phase	20
1.8 Photo-Induced Phase Transition at Room Temperature	21
1.9 Photomagnetism	23
1.9.1 Photo-Induced Demagnetization by One-Shot-Laser-Pulse .	23
1.9.2 Reversible Photomagnetic Effect	25
1.10 Summary	31
References	32

2 Photoinduced Energy Transfer in Artificial Photosynthetic Systems

<i>H. Imahori and T. Umeyama</i>	37
2.1 Introduction	37
2.2 Two-Dimensional Multiporphyrin Arrays	38
2.2.1 Self-assembled Monolayers of Porphyrins on Gold Electrodes	38
2.2.2 Self-assembled Monolayers of Porphyrins on ITO Electrodes	45
2.3 Three-Dimensional Porphyrin Arrays	47
2.3.1 Self-assembled Monolayers of Porphyrins on Metal Nanoparticles	47
2.3.2 Self-assembled Monolayers of Porphyrins on Semiconducting Nanoparticles	56
2.4 Molecular Nanostructures	60
2.4.1 Porphyrin J-Aggregates	60
2.4.2 Conjugated Polymer-Carbon Nanotube Composites	62
2.5 Conclusions and Outlook	64
References	65

3 Electro-Magneto-Optics in Polarity-Controlled Quantum Structures on ZnO

<i>H. Matsui and H. Tabata</i>	73
3.1 Introduction	73
3.2 Zn-Polarity and Quantum Structures	75
3.2.1 Surface Character	75
3.2.2 Homoepitaxial Growth and Optical Properties	77
3.2.3 $\text{Mg}_x\text{Zn}_{1-x}\text{O}/\text{ZnO}$ Heteroepitaxy	79
3.2.4 Stranski-Krastanov Mode and Lateral Composition Modulation	81
3.2.5 Multiple Quantum Wells and Excitonic Recombination	84
3.3 Nonpolarity and Quantum Structures	87
3.3.1 Nonpolar Growth of <i>M</i> -Face (10-10)	87
3.3.2 Step-Edge Barrier and Self-organized Nanowires	89
3.3.3 Linearly Polarized Light Emissions	92
3.3.4 Large Anisotropy of Electron Transport	95
3.4 Quantum Well Geometry Based on ZnCoO	98
3.4.1 Spin and Band Engineering	98
3.4.2 Ferromagnetism	102
3.4.3 Space Separation of Exciton and Localized Spin Systems ...	105
3.5 Conclusion	107
References	108

4 Nonadiabatic Near-Field Optical Polishing and Energy Transfers in Spherical Quantum Dots

<i>W. Nomura, T. Yatsui, and M. Ohtsu</i>	113
4.1 Introduction	113

4.2	Nanophotonic Polishing Using a Nonadiabatic Photochemical Reaction	114
4.2.1	Nonadiabatic Optical Near-Field Etching	115
4.2.2	Experiment	115
4.2.3	Results and Discussion	116
4.3	Optical Near-Field Energy Transfer Between Spherical Quantum Dot Systems	117
4.3.1	Exciton Energy Levels in Spherical Quantum Dots	118
4.3.2	Resonant Energy Transfer Between CdSe QDs	119
4.3.3	Control of the Energy Transfer Between ZnO QDs	125
4.4	Conclusion	128
	References	129
 5 Shape-Engineered Nanostructures for Polarization Control in Optical Near- and Far-Fields		
	<i>M. Naruse, T. Yatsui, T. Kawazoe, H. Hori, N. Tate, and M. Ohtsu</i> ...	131
5.1	Introduction	131
5.2	Polarization and Geometry on the Nanometer Scale	132
5.3	Layout Dependence	137
5.4	Symmetry in Polarization Conversion	138
5.5	Hierarchy in Optical Near-Fields and Its Application to Multi-Layer Systems and Authentication Functions	139
5.6	Conclusion	143
	References	144
	Index	147
