

Contents

- 1 Introduction—Epistemology and Probability in Quantum Theory:
Physics, Mathematics, and Philosophy** 1
 - 1.1 Classical and Nonclassical Epistemology 1
 - 1.2 Nonclassical Epistemology and Quantum Probability 12
 - 1.3 Physics, Mathematics, and Philosophy in Quantum
Theory 21
 - 1.4 The Architecture of Quantum-Theoretical Concepts 26
 - 1.5 Epistemology and Interpretation 39

- 2 Quantum Phenomena and the Double-Slit Experiment** 45
 - 2.1 The Double-Slit Experiment: From an (Almost) Classical
to a Nonclassical View 45
 - 2.2 The Double-Slit Experiment, the Uncertainty Relations,
and Probability 57
 - 2.3 The Delayed-Choice Experiment 65
 - 2.4 The Quantum Eraser 70
 - 2.5 Repetition and Erasure, Classical and Quantum 73

- 3 Heisenberg’s Revolutions: New Kinematics, New Mathematics,
and New Philosophy** 77
 - 3.1 “A Step of Probably Fundamental Importance”: From Bohr
to Heisenberg 78
 - 3.2 The Founding Physical and Philosophical Principles
of Heisenberg’s Quantum Mechanics 92
 - 3.3 The Correspondence Principle Between Physics
and Mathematics 100
 - 3.4 “Ensembles of Quantities”: From Experiment to Mathematics
to Physics 107

- 4 From Geometry to Algebra in Physics, with Heisenberg** 115
 - 4.1 “A Purely Algebraic Method of Description of Nature” 115
 - 4.2 “A New Era of Mutual Stimulation of Mechanics
and Mathematics” 128

5	Schrödinger's Waves: Propagation and Probability	137
5.1	Quantum Waves and Quantum Probability.	138
5.2	"The Wave Radiation Forming the Basis of the Universe"	144
5.3	Schrödinger's Equation	155
5.4	Wave Mechanics Between Optics and Mechanics	161
5.5	Quantum Mechanics Beyond Mechanics and Optics.	165
5.6	The Ends of the Wave Function: From Quantum States to Entangled Knowledge	171
6	Bohr's Como Argument: Complementarity and the Problem of Causality	179
6.1	Complementarity: Between Concepts and Experiments	179
6.2	The Quantum Postulate: Discontinuity and Irrationality	186
6.3	Complementarity and Causality.	191
6.4	Quantum Causality in Dirac, Heisenberg, and von Neumann	202
6.5	A Brief History of Quantum Causality	214
7	From Como to Copenhagen: Renunciations	219
8	Can Quantum-Mechanical Description of Physical Reality Be Considered both Complete and Local?	237
8.1	Correlations, Completeness, and Locality	238
8.2	Can Quantum-Mechanical Description of Physical Reality Be Considered Complete? EPR's Argument	248
8.3	Can Quantum-Mechanical Description of Physical Reality Be Considered Complete? Bohr's Argument	252
8.4	Can Quantum-Mechanical Description of Physical Reality Be Considered Local?	268
9	Essential Ambiguity and Essential Influence: Reading Bohr's Reply to EPR.	279
9.1	Framing the Argument.	279
9.2	Measurement and Complementarity	284
9.3	Restaging the EPR Experiment	294
9.4	Essential Ambiguity and Essential Influence	301
9.5	From Temporality to Relativity.	306
10	Mysteries Without Mysticism, Correlations Without Correlata, Epistemology Without Ontology, and Probability Without Causality	313
10.1	Mysteries Without Mysticism.	313
10.2	Correlations Without Correlata	323

Contents	xxxi
10.3 Epistemology Without Ontology	327
10.4 Probability Without Causality	336
11 Conclusion: “The Mere Touch of Cold Philosophy”	353
References	369
Name Index	379
Subject Index	383

Epistemology and Probability

Bohr, Heisenberg, Schrödinger, and the Nature of
Quantum-Theoretical Thinking

Plotnitsky, A.

2010, XXXIV, 404 p. 2 illus., Hardcover

ISBN: 978-0-387-85333-8
